The Official Publication of the Worldwide TV-FM DX Association

APRIL 2007

The Magazine for TV and FM DXers

GET UP ON THE ROOF

22
MONTHS
REMAINING UNTIL
ANALOG TV SHUTOFF

AND GET READY FOR DX!

Les Prus is ready, are you?

Boise is Calling the NRC
and the WTFDA.
Make your plans now!

TV and FM DXing was never so much

THE WORLDWIDE TV-FM DX ASSOCIATION

Serving the UHF-VHF Enthusiast

THE VHF-UHF DIGEST IS THE OFFICIAL PUBLICATION OF THE WORLDWIDE TV-FM DX ASSOCIATION DEDICATED TO THE OBSERVATION AND STUDY OF THE PROPAGATION OF LONG DISTANCE TELEVISION AND FM BROADCASTING SIGNALS AT VHF AND UHF. WTFDA IS GOVERNED BY A BOARD OF DIRECTORS: DOUG SMITH, GREG CONIGLIO, BRUCE HALL, KEITH MCGINNIS AND MIKE BUGAJ.

Editor and publisher: **Mike Bugaj**

Treasurer: **Keith McGinnis** *Webmaster:* **Tim McVey**

wtfda.info *Site Administrator:* **Chris Cervantez**

Editorial Staff: **Dave Williams, George W. Jensen, Jeff Kruszka**

Keith McGinnis, Fred Nordquist, Nick Langan, Doug Smith,

Chris Kadlec, Peter Baskind and John Zondlo,

Our website: www.anarc.org/wtfda Our forums: www.wtfda.info

APRIL 2007

Finally! For those of you online with an email address, we now offer a quick, convenient and secure way to join or renew your membership in the WTFDA from our page at:

<http://fmdx.usclargo.com/join.html>

Dues are \$25 if paid to our Paypal account. But of course you can always renew by check or money order for the usual price of just \$24. Either way, it's still a bargain!

VUDS ON A CD!

Every VUD from Jan 1980 to December 1989 is on this disk. You'll need Adobe Reader to read them. Why have a box of old VUDs taking up space when you can have this. **It's yours for just \$8.00 per disk.** Send your check or money order for \$8.00 to WTFDA, P.O. 501, Somersville, CT 06072. Make it payable to **WTFDA.**

No DX reports at all, plus illness and taxes make this a very thin issue this month. We need some DX!

And now... eVUDS ON CD!

All eVUDs from 09/01 through 12/05 are on this disc (except 8/02 which was not published). Follow the changes from day one to the present form. **You can have it for just \$6.00** (\$5.00 plus a dollar shipping). Use the same address as for VUDs on CD shown on the opposite column. Have a great month!

Frank Aden Hosts the 1st NRC/WTFDA Convention!

Friday, August 31, 2007 through Sunday, September 2, 2007
At the Rodeway Inn, 1115 North Curtis Road, Boise, ID 83706
(208) 376-2700

The First ever Combined National Radio Club/WTFDA Convention!
Registration for all is \$15, spouses are \$10 and kids under 14 are free. The cutoff date for registering with the club(s) is August 15, 2007; with the hotel, August 20, 2007.

PLEASE SEND YOUR REGISTRATION TO EITHER CLUB

The Mailbox

MIKE BUGAJ MBUGAJ@SNET.NET

WE'RE HERE!

And I bet you thought the VUD was supposed to be late this month. Well, it was. My wife and I should have been out on the west coast right about now, but thanks to severe bouts of bronchitis, we decided to postpone our visit for a couple of months and schedule it for a time that makes publishing your VUD a little easier.

On March 22nd, the FCC adopted final HD radio rules, effectively removing HD radio from experimental status and pushing it into the mainstream. What the FCC did not do (yet) was mandate a drop-dead date for 100% adoption of HD radio.

I don't think their decision was a shocker for anyone in the WTFDA. We all knew what decision was coming so we were all prepared to some extent for the results. And so far, none of us has jumped off a bridge over this.

MEMBERS AND MORE

This month we say hello to **Dale Rosen**, our newest WTFDA member. Dale lives in Sugar land, TX, a very sweet town, and DXes FM with a Yamaha RX-V992 AV receiver with an antenna up in the attic. Welcome, Dale! Hope you enjoy it here!

During the period 2/21 to 3/20 we found renewals in the mail from **Carlton Howington** (FL), **Nate Ely** (WI), **Bob Garchak** (PA), Aaron Mitterling (IN), **Harry Hayes** (PA), **Dave Allen** (IL), **Tim Katlic** (NY), **Frank Drobny** (CA), **Marcus Barboni** (PA), **Allan Dunn** (MA), **Greg Barker** (IN), **Bill Dvorak** (WI), **Bill Draeb** (WI), **Dave Legler** (MN), **Luis Franceschi** (PR), **Milton C. Bay** (KY) and **Joe Kureth** (MD). Thanks everyone for your support!

Bill Dvorak writes: "*Currently I am waiting for spring so that I can get my antenna installed on the new home*". And I need to put up a new rotor for my TV antennas and I noticed there's still a little snow on the roof (March 22nd).

Gary Olson writes regarding the old AIPA photos in the last issue: "*The bottom photo was the 1960 convention (see the numbers running vertically next to the AIPA sign) (now I see them – Mike) held at Tom Hidley's home in Chicago. It was my first convention and I met many TV DXers for the first time in my life. It brings back many memories. A lot of these*

folks have passed away. The upper photo was probably taken a year or two before I was an AIPA member.

Bob Cooper also emails that during April there will be a satellite trade show in Atlanta and part of that will be a "20th C-Band reunion" of old timers who pioneered in the C-band from the late 70s into the late 80s. On Friday, April 19th from 6-8pm there will be a web televised dinner ceremony. The dinner will be web-available at <http://www.satelliteguys.us>. The event is called Old Fogies Gumming Chicken and Getting Drunk. I hate to break it to you guys but prune juice won't do it.

The dinner ceremony will be shot with three cameras and it will be shown in HD, for some unknown reason. Bob asks that if someone records it on a DVD, he would love to have a copy of it sent to him in New Zealand.

Also Bob will again be at the Dayton Hamfest in mid-May, at the M-Squared booth. Drop by, bring some prune juice and say hi.

FCC Adopts Final HD Radio Rules (03-22-07)

The FCC this morning adopted final digital radio regulations that allow FM radio stations to commence digital multicast operation without prior FCC approval, and which permit AM stations – which have been limited to daytime-only digital operation – to commence hybrid digital nighttime operations.

The order also permits FM stations to use separate analog and digital antennas without applying for special temporary authority, and permits FM stations to operate in the "extended" hybrid mode, which affords an extra 50kb of space of data carrying capability.

Additionally, FM booster and Low Power FM stations are now permitted to operate digitally.

The order requires all stations operating in digital to offer a free digital signal that is comparable in quality to its analog signal, and that stations digitally simulcast all content heard on the analog signal.

The FCC also adopted what it called a "flexible bandwidth" policy that allows stations to transmit multicast signals and data streams at their discretion.

Thanks to John Zeis, Steve Rich, and Rick Shaftan for information appearing elsewhere in this month's column.

Rick reports WBFF-45, Baltimore, operating off-frequency. He's measuring the station on minus offset, instead of its assigned zero. Why, I have no idea...

Probably the big news this month is the grant of hundreds of Digital Companion Channels (DCC) for LPTV and Class A stations. Again, these stations will operate

in parallel with the associated analog LPTV.

The final deadline for digital conversion of receivers has passed. As of March 1st, all TV sets regardless of screen size and all devices (VCRs, DVD recorders, etc.) that receive TV signals must include DTV tuners.

As is common with such rules, they prohibit the import or shipping in interstate commerce of non-compliant receivers. Sets that are already in the store can be left on sale until they sell.

At Wal-Mart (among many other stores) the prices of analog receivers dropped markedly at deadline. I saw a 13" color analog TV selling for under \$50. At the same time, standard-definition digital sets have come down quite a bit too, with 19" standard-definition digital receivers as low as \$179.

What this means is that essentially everyone who buys a new TV from here on out will have DTV capability.

For more details, see:

http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-05-190A1.doc

Distribution of interim and permanent DTV channel assignments:

Seriously, it's a LOT more expensive to operate a UHF transmitter than a VHF rig - and that applies just as much to digital as it does to analog. By moving from a UHF DTV channel to an existing VHF analog assignment, a station can greatly reduce power without sacrificing coverage. -Doug Smith

The only problem with this is, especially here in the Northeast, is there are so many sandwiched VHF stations, that many of those who did get a VHF assignment are not going to replicate the service their old Analog UHF did. I use my station as a good example. Our assignment (channel 11) has to be kept highly directional to protect WENH-TV out of Exeter, NH. And because of the spacing, our power is kept lower than maximum, and we're definitely going to lose that coverage area. It's rare to find situations in Southern New England and anywhere in the megalopolis, to find a situation like WPRI-TV, WPRI-DT which is a flamethrower non directional channel 13, and probably has better coverage digitally than they did analogally. (WNAC will also see coverage they never had on digital 12, as they will be going non directional on a 12.). But in the Northeast, with the record high cable penetration and satellite penetration, does your coverage area mean anywhere near as much as it did, even just 10 years ago? -Mike Fitz.

Certainly stations have to use their judgment - and not **every** station that could have requested a high-band VHF channel did so.

It's probably a geographic thing in more than one way. Around here there are still a lot of smaller cable systems in important outlying towns - systems that aren't connected to Comcast's direct fiber feed from our studio. (for that matter, even Comcast is using OTA pickup for their HD subscribers) If we don't get a decent digital signal into their headends we may well not be on cable in places like Waverly, Tullahoma, and Livingston.

But I wouldn't at all doubt your highly-directional pattern can still easily hit any cable headend in your relatively small (geographically-speaking) market.

I guess my point (and I suspect yours) is that these days, there isn't much point to having coverage outside your market. -Doug Smith

Do you have a number or estimate as to what percentage of DTVs will move to their counterpart's VHF channel? -Dan O.

That's harder to answer than I thought. This is a quick & dirty analysis & I fear there may be some errors...

I count 1,900 full-power TV stations.

Distribution by channel:

Ch	Analog	Permanent DTV
2	58	13
3	61	7
4	64	5
5	56	14
6	58	9
7	61	62
8	61	61
9	56	60
10	57	67
11	57	52
12	58	51
13	68	70

Some of these are stations whose interim channel is VHF and are keeping it - of these, some have analog channels on UHF and others' analogs are on different VHF channels. (for example, WSMV analog 4/DTV 10, which will stay on DTV 10) So it'll take more time to answer Danny's question fully.

It should be noted that 16 additional stations requested high-band VHF channels for permanent DTV but were rejected by the FCC. Nine will end up on low-band VHF, the other seven on UHF. Three stations' request for high-band channels were rejected, but they were granted **different** high-band channels. Two applications for low-band VHF DTV channels were rejected, but both stations were granted different low-band channels.

My initial understanding was that most DTVs would move to their ATVs' channels. However, I have seen consumer information from various sources that led me to think most DTVs would be on UHF permanently. In fact, some sources are promoting UHF as superior to both low- and high-band VHF for DTV.

I wonder how many of those sources are selling Terk antennas?

There is CONSIDERABLE misinformation floating around about this. A lot of "experts" still believe all DTV is UHF **today**.

In my experience (both my personal reception and viewers who call WSMV Engineering)

high-band VHF at currently-authorized power levels is equal to UHF.

I now wonder if some current owners of HDTV reception equipment (including UHF antennas) are going to be surprised when their local DTVs move.

Probably!

I was under the impression from years ago that the entire VHF low band was to be auctioned off... -John Ebeling

They're going to auction off a bunch of channels, but they won't be VHF-low.(at least not yet)

There were three definitions of "core spectrum" floated:

- 14-59
- 7-51
- 2-51

We ended up with the latter definition. I think three things colored the decision:

- Those who were interested in buying ex-TV spectrum felt UHF channels 52-59 would be more useful than VHF channels 7-13. (they planned on using the channels to feed handheld devices, where the larger VHF antennas would be a problem)
- TV stations wanted to keep VHF channels where coverage could be achieved with lower powers.
- TV stations didn't realize how poorly 8VSB would work on low-band.

Do you have a number or estimate as to what percentage of DTVs will move to their counterpart's VHF channel? -Dan Oglethorpe

Of the 61 stations with analog facilities on channel 7:

42 - plan to move their DTV facilities to channel 7 (their current analog channel). Of these, 33 are moving from UHF DTV channels, and eight from other high-band VHF channels. (one, KSWY-TV in Wyoming, was licensed too late to receive a DTV channel and will be flash-cutting to DTV on channel 7)

2 - requested permission to move their DTV facilities to channel 7 but were denied and will be staying on UHF.

4 - requested, and received, VHF-high channels other than 7.

13 - requested, and received, UHF channels.

I believe the count will probably be similar on the other six VHF-High channels.

The first five rows show how many stations' DTV assignments are within the various bands - VHF Low, VHF High, UHF core, UHF non-core, and how many stations received no DTV assignment at all.

Where these stations are going:

Flash-cut: the station has no DTV assignment and will flash-cut to DTV on its existing analog channel

The next four rows show how many stations are using one of their existing two channels - either moving their DTV to their analog channel, or keeping it on an existing VHF-Low, VHF-Hi, or UHF DTV assignment.

Finally, the last three rows show how many stations are moving to completely new channels.

I selected channel 30 as representative of UHF - don't have enough time to actually analyze all UHF channels!

Some things you'll notice here:

- Stations whose analog assignment is on high-band VHF are FAR more likely to be keeping that assignment.
- Almost nobody wanted to move to a VHF-Low DTV assignment.
- Stations whose analog assignment is on low-band VHF are FAR more likely to be keeping their UHF DTV assignment.
- Only one channel 30 station received a VHF DTV assignment, and that station will be returning to channel 30 for its permanent DTV operation.

	2-6	7-13	30
DTV on VHF-Low	4.8%	1.4%	none
DTV on VHF-Hi	12.3%	20.5%	4.4%
DTV on core UHF	68.1%	63.4%	82.6%
DTV non-core	11.6%	12.7%	none
no DTV channel	3.6%	2.5%	13.0%
Flash-cut	1.9%	2.1%	13.0%
to analog ch.	10.3%	65.5%	21.7%
to VHF-Low DTV	2.6%	0.7%	none
to VHF-Hi DTV	11.0%	11.4%	none
to UHF DTV	68.7%	20.9%	78.3%
to VHF-Low new	0.3%	none	none
to VHF-Hi new	1.0%	0.2%	none
to UHF new	5.5%	0.9%	none

GETTING READY FOR DX!

It's spring, and both TV and FM are beginning to come alive with weak, scattery signals that weren't there just a few short weeks ago. On FM, those weak 200-250 mile scatter signals have returned. On TV, some of the fringe DTV stations what wouldn't lock in at all during the winter are now showing up with video and audio and the usual intermittent pixellation. They are back and yes, another DX season is beginning.

Before the season gets into full swing, take some time to examine your own DX setup and make sure it will stand up to the Es and tropo openings that will surely follow.

First, check your rotor. Make sure it rotates. Then check to see that it rotates 360 degrees. If it won't, you'll need to replace it. Go outside and watch it turn. Visually verify that the rotor turns a full 360 degrees.

If you've had snow or ice on the roof what covered your rotor lead, carefully check the rotor wire for cracks and bare wires. If your rotor won't turn, or if it turns in one direction, a problem with your flat, 3 wire conductor may be the cause.

Check your tripods, masts, U-bolts, and bolts for rust. Make sure all connections are tight. Make sure the bolts on your antenna haven't loosened over the winter causing your antenna to wander from its north position.

Check your antennas for rust. If your connections are really rusty, you might want to consider replacing bolts, washers or nuts/wingnuts or possibly just changing the entire antenna.

Water will kill TV and FM signals. Look at your coax and your baluns. Water in baluns will kill signals. You should have your coax-to-balun connections covered with a watertight rubber boot. You should also have something like silicon seal or coax putty smeared in any location where water could possibly leak in and cause problems.

Heavy winds over the winter will also cause havoc with your antenna installation. Look for shorted or bent elements. Repair or replace as necessary.

Turn on your tuners and televisions and check to see that the signals you received last summer are still as strong. Install some narrow filters in your FM tuner. If you use sockets, see that the filters are still socketed securely. If you have no audio or video, check to see if another family member has messed with your cable connections over the winter.

Analog television hasn't left us yet, and there is still time to log some great analog Es this summer. Do a little preventative maintenance this spring to help make sure that you'll see the ID slide at the right instead of just a blank, snowy screen. The first big skip opening of the year is no time for surprises!

And one other thing...if you have some databases or links to websites with databases bookmarked on your computer, check to see that the links are still where you put them and verify that the links work! There's nothing worse than going to a website to find out the calls of a station you've heard, only to get a Page Not Found error.

OBSERVATIONS ON THE STATE OF THE HOBBY

WANTED: BOLIN PHASE BOX

I am going to need a Bolin Phase Box for FM in case anyone isn't going to be using theirs anymore. I need it for separating analogs on the same channel as well as reducing/eliminating the IBOC of the four Allentown, PA area stations on 95.1, 96.1, 100.7 and 104.1. Also any APS 13 that is no longer being used could be put to good use at my location. I could stagger stack them or use them with the phasing box. I'm near the crest of a hill at 1,860 ft ASL.

Personally I don't feel that IBOC will last on either AM or FM. As others have stated, it will go the way of AM Stereo. People aren't going to buy the receivers in any great numbers. Most of the public has no idea what "now broadcasting in HD" means. Why spend the money when you can get the same programming on existing FM & AM ?? At least on digital TV you get multicasting to be able to receive additional programs. Plus you can get higher definition pictures.

Bob Seaman Hazleton, PA

CAN YOU SMELL IT?

There will still be several FM frequencies available here on Cape Cod for at least the next few years. Our company is at least 1 year out from going HD on any of our 4 stations, and I know that costs and signal coverage will hinder the small companies from shelling out at least 60K for a new transmitter until they are forced.

From the choices given in programming, there is no way IMHO "normal consumers" will purchase HD radios in droves to make it cost effective for any broadcaster to keep these inefficient electricity guzzlers running.

Hey look at satellite. The two companies are already trying to merge. Choices will be fewer if that goes through. Terrestrial broadcasters have their chance right now to make this work, and they are blowing it by putting generic jukeboxes on these side channels. But to make money on them, they'll need to have advertising. I don't see radio listeners migrating to a channel they need a separate \$200 unit for, that plays commercials, comes in for a few miles, and has no local content (i.e. just music and sweepers).

So, I say hang in there guys. I smell AM stereo!! (Steve Solomon)

IT AIN'T OVER

I'll buy the APS 13...and other items if people are unloading them.
It ain't over till the fat lady sings...and she isn't singing here in Eastern MA yet!
(Keith McGinnis)

WELL, NOT QUITE...

FM Dx has not been as much a part of my life as it used to. Many of my once good DX frequencies have become overran with digital noise. If I do FM DX, it seems to be during E-skip where the signals can punch through some of that garbage. (Dan Oetting)

USDTV CLOSES THE DOORS

On Monday, March 12, 2007, USDTV informed its customers that it had ceased operations after nearly four years of pioneering efforts to being about a low-cost, family friendly alternative to cable TV. The closure was due to lack of funding. They have made arrangements with a third party installation company to convert the USDTV set-top box so as to continue receiving free over-the-air local digital and high definition TV channels without the USDTV cable service.

For more information on the set-top box conversion or other items please visit: customer_service/stb.html. You may keep or return your USDTV receiver.

SOMETHING TO CROW ABOUT

A Little History of the WTFDA from 1969

Some would call it a miracle. Others would say "I told you so". But to most Of us at the publishing end of WTFDA we think the developments made by this organization in recent months have certainly been remarkable (especially in light of the inauspicious debut VHF-UHF Digest made a little over a year and a half ago).

Then WTFDA began. It started as sort of a desperation maneuver based on the efforts of a handful of hopeful individuals at the 1967 ANARC convention. In the period since a lot has happened to our club and our bulletin. We think it's "something to crow about".

Reviewing a bit of history, late 1967 found the flailing WMRC (Worldwide Monitors Radio Club) converted into WTFDA with a membership made up of 26 WMRCers and a few TV-FM DXers. An initial bulletin was published which was unspectacular to say the least. At that point it looked as if there was little promise for any substantial bulletin improvement or club growth. Most of the TV-FM DXers of the past had been out of contact with one another for years, the club itself lacked a treasury and a decent mimeograph machine, and club leadership and organization was unstable.

However, almost everything must start small before reaching any degree of success. WTFDA was a case in point. Through mid-1968 WTFDA membership exhibited a steady growth. Bulletin size and quality improved with continued member support. As the months rolled on, the club began to reach a plateau - one of those "go/no - go" points that most every organization reaches. Heading WTFDA was no longer a one-man job. Responsibilities for handling correspondence, controlling the treasury, organizing materials, and publishing the growing bulletin had become an immense, fulltime task.

At this point further development might have been stymied. But the support and enthusiasm of the members carried this organization over the hump. First, yours truly coincidentally moved into the Milwaukee area at this time and was able to provide much needed assistance on publishing day each month. Then Chicago area DXers Morrie Goldman and Bill Heusmann volunteered to make periodic trips to Milwaukee - at their own expense - to assist with getting the bulletin out. Milwaukeeans Dave Janowiak and Ed Semrad in turn offered timely help. And more recently John Hansen has provided another able pair of hands to aid WTFDA.

As a result your club today is stronger and better organized. Responsibilities have been divided so that your club publisher/ president is no longer terribly overburdened with club responsibilities. Most important to you the members your monthly bulletin, VHF-UHF Digest, has improved spectacularly in both size and quality. For those of you who were members of the AIPA, the only other TV-FM DX club to exist in North America, I am sure you will agree that our bulletins have far surpassed the AIPA bulletins in almost every area of consideration (including size, consistency of columns, overall neatness, quantity of information, quality of reproduction, etc.).

In summary, thanks to avid support (and this includes who have made voluntary contributions, sponsored ads in our behalf, offered to write columns, and those who have merely supported regular bulletin features) WTFDA has become a strong and well respected organization at a time when DX clubs are coming and going at a phenomenal rate.

This is certainly not to say we have reached our highest peak. We can do much greater things and we plan to. We have come a long way in the past year-and-a-half and we can go much further. At headquarters we are truly excited over the endless possibilities for providing a better and more active club for the membership. The future has never been brighter.

If you have ideas or suggestions to assist in the expansion and improvement of your club by all means forward them. With your continued support we will in turn continue on the path upward.

Gary Olson
