**CONVENTION 2009
LABOR DAY WEEKEND
NRC & WTFDA TOGETHER AT
ALLENTOWN, PA**

THE WORLDWIDE TV-FM DX ASSOCIATION

Serving the UHF-VHF Enthusiast

THE VHF-UHF DIGEST IS THE OFFICIAL PUBLICATION OF THE WORLDWIDE TV-FM DX ASSOCIATION DEDICATED TO THE OBSERVATION AND STUDY OF THE PROPAGATION OF LONG DISTANCE TELEVISION AND FM BROADCASTING SIGNALS AT VHF AND UHF. WTFDA IS GOVERNED BY A BOARD OF DIRECTORS: DOUG SMITH, GREG CONIGLIO, BRUCE HALL, KEITH MCGINNIS AND MIKE BUGAJ.

Editor and publisher: Mike Bugaj

Treasurer: Keith McGinnis wtfda.org Webmaster: **Tim McVey**

wtfda.info Site Administrator: **Chris Cervantez**

Editorial Staff: Jeff Kruszka, Keith McGinnis,

Fred Nordquist, Nick Langan, Doug Smith,

Peter Baskind, Bill Hale and John Zondlo,

Our website: www.wtfda.org; Our forums: www.wtfda.info

APRIL 2009

Finally! For those of you online with an email address, we now offer a quick, convenient and secure way to join or renew your membership in the WTFDA from our page at:

<http://www.wtfda.org/join.html>

You can now renew either paper VUD membership or your online eVUD membership at one convenient stop. Use the link above to either join the WTFDA or renew your membership in North America's only TV and DX organization.

IT COULD HAVE BEEN INTERSTING

Well, yes, March could have been interesting. It could have been a month void of high power analog television signals, but thanks to the new administration, it wasn't.

Looking back at March we found that there wasn't very much DX-worthy to talk about. However, tropo actually was noted in the Midwest around the 17th and 18th. And some days earlier, tropo was observed in LA, MS and AR. Some of these receptions were in the 400+ mile range. And Roy Barstow on Cape Cod saw TV tropo from as far south as South Carolina on the 18th. That's it for DX activity in March.

MEMBERS AND MORE

Our newest member this month is **Jon Petricoin** from Akron PA. Jon found our website and the rest is history. He's got a 7 foot parabolic and is restoring it. Welcome to the WTFDA Jon!

Renewals received during the period 2/21 to 3/14 came from **Harry Hayes** (PA), **Larry Kenney** (CA), **George Rogers** (GA), **Bruce Hall** (ON), **Jeff Wolf** (MD), **Nate Ely** (WI), **James Ivill** (WV), **John Zeis** (PA), **Allan Dunn** (MA), **Gerard Hart** (MY), **Dan Dankert** (CA), **Edward Ritchie** (WI), **Larry Back** (OH), **Peter Taylor** (WA), **Bill Draeb** (WI), **Chris Dunne** (FL), **Barry Shinall** (IA), **Tom Yingling** (MD), **Ivan Silva** (Brazil), **Luis Franceschi** (PR), **Doug McAbee** (MI), **Tim Cronin** (IL) and **Paul Crego** (NY).

WHAT HAPPENED IN FEBRUARY

PAYPAL

For those of you who use Paypal to renew your memberships, please note that we've made a little change. We've set up a business account for the WTFDA and, in order to use it, you MUST renew your memberships from the WTFDA website at <http://www.wtfda.org>. I am not accepting dues to my own personal Paypal account any longer, so don't send money to it. And the club cannot accept payments to an email address as we did in the past. Use the website instead. It's quick. It's easy. And it puts your dues into the club's checking account and saves us all time.

WTFDA TV STATION GUIDE

John Ebeling wrote that he has TWO copies of the old TV Station Guide laying around and wonders if anybody wants one (or both). Yes, they are out-of-date but someone might want one to remember the analog era. I can't remember what we charged for these but I think \$5.00 might cover the postage on it (this is a pretty large stack of 8.5" x 11" paper). Email me if you are interested.

LENNY LIVES!

WTFDA member **Lenny Goldberg** (OR) recently spent ten days at the University of Maryland Medical Center where successful cancer surgery was performed on Feb 25th. Lenny has had more than his share of obstacles in his life to overcome and his wife and his faith have helped him through them. Lenny, I'm glad your still here!

Of course like a true DXer he brought a radio with him during his stay. Unfortunately, reception in the hospital was terrible.

VIP307

Our man in New Orleans, **Richard Gray**, emailed us that Wade gave him the name of a dealer that has VP307s along with the VP306s. That dealer is Willtronics, located in Tyler Texas. Their phone is 800-657-2404. Richard says to expect to see one on the top of his house in the near future!

That is one monster of a VHF antenna! I'd expect that Southern DXers would have more use for one of those than those of us in the north.

So, if you want one, now you know where to get one. Take care and see you next month!
-Mike

Thanks to Joel Nelson and Glenn Hauser for information appearing elsewhere in this column.

DTS = Distributed Transmission System, where a single

station operates multiple transmitters on the same channel. The FCC lists only one city-of-license for all transmitters, but I'm listing them above by the city each individual transmitter is intended to serve.

We may be seeing MANY Canadian stations disappear in the next year – and not by flash-cutting to digital. Included in the list are two common Ontario Es targets CJOH-TV-6 (ch. 6) Deseronto and CKCO-TV-2 (ch. 2) Warton. A common Manitoba skip target – CKX-TV (ch. 5) Brandon – is also at risk.

CTVGlobemedia in Canada has filed a short-term renewal application for their stations. For some of their stations. They have indicated they have no intention of renewing the licences of three main stations and 45 relay transmitters.

The three main stations that will not be renewed are the "A" stations in Windsor and Wingham, Ontario (CHWI-16 and CKNX-8) and CBC-affiliated CKX-TV.

The two Ontario stations will simply leave the air. The application indicated Windsor and Wingham viewers wishing to see "A" programming will have to subscribe to a cable/satellite system that carries CFPL-10 London. In the past common practice had been to close the studios of economically-challenged stations and use their transmitters to relay some other co-owned station. However, CTV has made it clear their intention is to shut down these transmitters altogether.

CKX is likely to do the same; however, the station is for sale, and it's possible someone will buy it and keep it in service. The application indicates CTV offered to sell the station to the CBC for \$1, but the Corporation indicated they couldn't afford to operate the station and convert it to digital. (even though again, the station would likely be converted to a high-power relay, eliminating the cost of maintaining a studio.)

For what it's worth, the application cites a cost of \$437million to convert all CTV over-the-air transmitters to digital.

Four additional stations which currently carry some locally - originated programs will be converted to 100% relayers of other stations. These are CKCO-TV-3 Oil Springs (Sarnia), Ontario; CFRN-TV-3 Whitecourt, Alberta; CFRN-TV-4 Ashmont, Alberta; and CFRN-TV-6 Red Deer, Alberta.

The 45 relay stations that are to go dark – those of high power in **boldface**:

ALBERTA:

- *CFRN-3* relayers in Athabasca, Loughheed, and Rocky Mountain House.
- *CFCN-4* relayers in Bassano, Burmis, Coleman, Drumheller*, Oyen, Pigeon Mountain, Waterton Park, and the B.C. communities of Mount

Goldie, Moyie, and Sparwood.

* the low-powered channel 10 relay in Drumheller will be closed. Another, higher-powered relay on channel 12 will remain in operation.

MANITOBA:

- *CKY-7* relayers in Flin Flon, Snow Lake, The Pas, and Thompson.
- *CKX-5* relayers in **Foxwarren, McCreary**, (both ch. 11) and Melita. And CKX itself.

NEW BRUNSWICK:

- *CKCW-2* relayers in Campbellton and **Upsalquitch** (ch. 12).

NOVA SCOTIA:

- *CJCH-5* relay in Bridgetown.
- *CJCB-4* relay in New Glasgow.

ONTARIO:

- *CFTO-9* relayers in **Bobcaygeon** (ch. 54) and **Orillia**. (ch. 21)
- *CITO-3* relayers in Chappleau, Hearst, Kapuskasing, and **Kearns** (ch. 11).
- *CJOH-6* relayers in **Cornwall**, (ch. 8) **Deseronto**, (ch. 6) and **Pembroke**. (ch. 47)
- *CICI-5* relay in **Elliot Lake** (ch. 3).
- *CKNY-10* relay in **Huntsville**. (ch. 11)
- *CKVR-3* relay in Parry Sound.
- *CHBX-2* relay in **Wawa**. (ch. 7)
- *CKCO-13* relay in **Warton**. (ch. 2)
- *CHWI-16* relay in Windsor. (and of course CHWI itself)

PRINCE EDWARD ISLAND:

- *CKCW-2* relay in St. Edward.

SASKATCHEWAN:

- *CIPA-9* relay in Big River.
- *CKCK-2* relay in Fort Qu'Appelle.
- *CICC-10* relay in Hudson Bay.
- *CIWH-12* relay in Humboldt.

It remains to be seen if these closures will actually happen. The CRTC is overhauling the regulations applicable to over-the-air TV in Canada. Stations are trying to get restrictions relaxed, and to get the CRTC to order cable and satellite operators required to pay carriage fees to over-the-air stations. It is possible this is a negotiating ploy. On the other hand, it's possible it could actually happen...

In a more or less related area, CHCH-11 Hamilton and its relayers are also threatening to shut down completely this year. An employee group is offering to buy and operate the station contingent on concessions from the government.

The relay stations, all in Ontario:

London, (ch. 51) **Muskoka**, (ch. 67) North Bay, **Ottawa**

(ch. 11), Sault Ste. Marie, Sudbury, and Timmins.

Now, back to the U.S.:

When the FCC first authorized digital operation by LPTVs and translators, they speculated on the use of a single digital translator to relay several stations. While we've seen spotty reports of digital translators relaying multiple related stations, this month we have the first translator I'm aware of relaying unrelated stations.

Joel Nelson forwarded information on K31IQ-D, Sterling, Colorado. This translator is relaying KBDI-12, KTVD-20, KDVR-31, and KWGN-2 on four subchannels. For some reason, this translator is using major channel 51. (I.e., KBDI is coming up as 51-1, KTVD as 51-2, etc...) There are seven analog translators authorized in Sterling but K31IQ is the only digital operation.

As I understand it, K31IQ could legally use the major channel numbers of the stations being relayed. They could use 12-1 for their relay of KBDI, 20-1 for their relay of KTVD, 31-1 for their relay of KDVR, and 2-1 for their relay of KWGN.

We now have a third distributed transmission system (DTS) and the first outside Pennsylvania.. WHKY-DT Hickory, NC has filed to convert their existing single-transmitter system to a two-transmitter DTS.

The main transmitter (which seems to be located in the city of Hickory) would be replaced by a more powerful rig located a few miles southwest of the city. It would be supplanted by a second, less-powerful transmitter a few miles east of Charlotte on the WTVI-42 tower.

As expected, WSTE-7 in Puerto Rico has also filed for a DTS.

WYLE-26 Florence, Alabama has lost their license and their permit for a DTV on channel 20. FCC found they failed to operate between February 7th, 2007 and February 8th, 2008. The station did broadcast a test pattern for 24 hours on February 3rd, 2008, but the FCC held that didn't constitute "broadcasting". A 2006 amendment to the Communications Act requires the revocation of the license of any station that remains off the air for over a year. I do expect an appeal.

KDCU-DT in Kansas wants to buy the channel 31 DTV facilities of KSCW Wichita. KSCW is moving to DTV channel 19. Buying the existing facilities would get KDCU on the air faster – and would allow a significant power increase.

WPXD-DT Ann Arbor, Mich. has had its application to move from channel 31 to channel 19 denied. Canada objected; the proposed facility would interfere with their "checklist" facilities for CKXT-DT-2, on the same channel in London, Ontario.

Note a new full-power DTV-only station on the air on channel 48 in Pueblo, Colorado. KVSNDT 48 is believed to be a Univision affiliate.

Note also that antenna heights above average terrain are reported for WSB-DT's new translators in Athens and Gainesville, Georgia. HAATs are almost never reported for translators and LPTVs, although you can calculate them on the FCC's website. Indeed, I don't recall ever seeing a HAAT for a TV translator. (they do occasionally appear for FM translators)

The recent economic downturn has certainly affected behind-the-scenes operations at many (most!) TV stations. Contributions to retirement plans are being suspended; overtime and maintenance expenditures are being slashed; and of course, thousands of layoffs.

Until now, the technical parameters of stations' transmitters have not been affected.

Two co-owned DTV stations in central Texas have decided not to go ahead with plans to move to better channels.

KWKT-44 in Waco is operating on DTV channel 57. They have a permit to move their DTV operation to their analog channel (and antenna) with 135kw.

KWKT had filed a proposal to move to DTV channel 25, which is being abandoned by Waco station KXXV's analog signal. (KXXV-DT is on, and will remain on, ch. 26)

This proposal has been withdrawn, due to the large capital expenditure necessary to change channels. KWKT would not reuse the KXXV analog antenna; they'd have to buy a new ch. 25 antenna, swap out antennas on their tower, and replace the transmitter.

The other affected station is KYLE-28 Bryan. This station's proposal to remain on interim DTV channel 29 with 1000kw had already been approved. (the station had been slated to return to their analog channel with 50kw)

KYLE has asked the FCC to reassign channel 28, abandoning the channel 29 permit. The same reason was cited: poor economic conditions.

WSPA-7 (and DTV 53) Spartanburg, South Carolina is on reduced power after an ice-induced tower collapse. The station had a backup tower – but the main tower collapsed across the base of the backup and brought it down too.

Good (DTV?) DX!

NOTICE!!

Effective with the next issue, the amount of data listed for Translator facilities will be greatly reduced. The time utilized researching these items each month amounts to more hours than your editor cares to count. LPFM and Booster station information will not be affected at this time. I apologize for any inconvenience caused to anyone, but researching this information takes time away from more important tasks. However, if anyone needs details on a specific Translator, e-mail me and I'll investigate.

Glorious FM music through 4-in. speaker

\$21⁹⁵

Enjoy FM sound in a compact size at Sears surprising low price. 5 tubes plus rectifier. Sensitive FM tuner. Built-in line cord antenna provides fine reception in most areas. For FM broadcasts only (before ordering, be sure FM is locally available). Charcoal gray plastic. About 5x13x4 inches. 57 G 4012—Shipping weight 4 pounds. \$4 monthly Cash \$21.95

Western U.S. TV DX

Featuring reports from AK, AR, AZ, CA, CO, HI, IA, ID, IL, LA, KS, MN, MO, MS, MT, ND, NE, NM, NV, OK, OR, SD, TX, UT, WA, WI, and WY, along with the Canadian Provinces of AB, BC, MB, SK, and YT.

Send reports by the 15th of each month to:

Nick Langan
 1040 Riverview Drive
 Florence, NJ 08518
 E-mail: nickl@wtfd.org

The Editor's Note

The weather is getting warmer and every DXer knows what that means...chances for tropo. It's been happening across Texas and the Gulf region and has spread north in some instances during March into the Plains. We cross our fingers that some trop will develop on the West Coast this coming month as well.

We have reports from William, Dave, Fritze, and Dennis inside this edition of WTVDX. Enjoy!

William Draeb

1304 Ellis St.
 Kewaunee, WI 54216

Here are some more DTV loggings.

We have two Samsung HDTVs with built-in DTV tuners. However, when KTWU and WIBW-TV moved their digital operations from channels 23 and 44 to 11 and 13 we started having reception problems. As a result I added DTV boxes (an Accurian and a RCA ATSC-11 which pass HDTV) to the sets. Reception is better but there are still occasional problems.

Fritze H. Prentice, Jr

3275 State Highway 114W
Star City, AR 71667

email: kc5kbv@yahoo.com

web: <http://tvdxseark.blogspot.com>

Antenna: UHF TV--Channel Master 4228
VHF TV/FM --unknown make 4

element log periodic

Preamp: Channel Master 7777 Titan

Rotor GC w/CM rotor control

TV's: Analog: 1984 Vintage RCA 12" B&W manual tune ('click knobs') mainly for low band VHF

Durabrand (Orion) 13" Color for UHF and general VHF

Digital: Panasonic CT1030v 10" Color Monitor (NTSC in/out) and Zenith DTT900 Converter Box

PC Capture Card: WinTVGo (PC OS:

Windows XP)

VCR: Panasonic 4 head stereo (2001 vintage) to archive analog TV

DVD Recorder: Panasonic DMR-ES10 to archive DTV

I installed a new VHF antenna (Winegard YA1713) replacing a smaller VHF/FM antenna. This has helped local reception as well as DX on channels 7-13. Anyway, here is this month's report....

All times Central at Star City AR

March 7, 2009

12:36am **** KTVT 11 Fort Worth (TX). KTVT audio under nulled KTHV 11 (Little Rock) with voice id/promo for "CBS 11" and into repeat of local 10pm newscast. 12:49, signal strong enough to view video from KTVT

12:44am **** WFAA 8 Dallas. Repeat of 10pm newscast

7:15am **** KAFT 13 Fayetteville AR. AETN relay with "Sewing With Nancy", very good analog PQ nearly snow free at times.

7:16am **** KAFT-DT 9 Fayetteville AR. 13-1 main channel //with KAFT 13, and 13-2, and 13-3 AETN Create/Kids, and AETN Scholar resepctively. 13-4 Radio Reading Service (audio only).

7:18am **** KOLR 10 Springfield MO. "CBS Early Show", video hammered by neighbor KTVE 10 El Dorado 63mi away, but able to see. Audio solid.

7:23am **** KSPR-DT 19 Springfield MO. ABC's Good Morning America (2nd hour). Usual strong signal, strongest from that region during tropo.

7:23am **** KSFY-DT 28 Springfield MO "Awesome Adventures" E/I programming.

7:27am **** KOZK 21 Springfield MO. "Lomax The Hound Of Music" (amminated). Strong signal.

7:30am **** KOZK-DT 23 Springfield MO. Message that transmission tower for Ozarks Public TV (OPT) (KOZK) at Fordland MO made possible by KYTV ("KY3"). BOH ID for OPT network stations (KOZK and satellite KOZJ in Joplin) main subchannel (21-1) // with analog KOZK 21.

7:31am **** KAIT 8 Jonesboro AR. ABC GMA

7:45am **** KYTV-DT 44 Springfield MO. Leapfrogging over much smaller KARZ-DT (ex KWBF-DT) signal in Little Rock AR. Unstable lock due to both stations colliding on channel 44. NBC Today on main subchannel "3-1"

7:56am **** KYTV 3 Springfield MO. Signal received on both my "skip" antenna (6m dipole mounted vertically in tree), and very weak on the new high band Winegard yagi. Local ad breaks near top of hour.

March 9, 2009

6:35am **** KLTV 7 Tyler TX. Local news with "circle 7"/KLTV logo. Good Morning East Texas.

6:38am **** KSLA 12 Shreveport LA. Very weak under KTHV-DT 12, but seen. KSLA analog strengthens and as of 7:32am is very strong and while snowy is very watchable.

6:50am **** KLTM 13 Monroe LA. "Martha Speaks" (PBS Kids), snowy, but watchable image. LPB group ID at 7:00am.

7:27am **** KTAL 6 Texarkana TX. Local news break during NBC Today. The low VHF signal is strong on the Winegard high-band yagi. KTBS 3 Shreveport also making the trip and showing up with the highband yagi.

7:46am **** KMPX 29 Decatur TX. Metro DFW SS Indie with infomercial en espanol.

7:50am **** KUVN 23 Garland TX. DFW Univision O&O with network morning show.

7:51am **** KPXD 68 Arlington TX. Ion O&O with....drum roll please, an infomercial.

7:52am **** WFAA 8 Dallas TX. local news break.

7:55am **** KDFW-DT 35 Dallas TX. FOX O&O with local news en HDTV (4-1), radar on 4-2 subchannel.

8:17am **** KETK-DT 22 Jacksonville TX. Tropo bringing in KETK over 1MW ERP KATV "local". KLTV 7 also in at this time.

Dennis Park Smith

3605 Sam Remo Drive

Equipment – TV rxs with indoor antennas:

- 1st floor: Oldish 13" analog MGA/Mitsubishi CS1395, rabbit ears & bow-tie
- 2nd floor: Feb-2008 20" LG HD flat-screen 20LS7D, ears & 2-bay bow-tie
- Occasionally: 2008 Zenith (/LG) DTV box DTT901

This report is for February 2009. There was a little occasional southern-Calif coastal tropo to San Diego/Tijuana up to 200 mi/320 km at my place. With his outdoor antennas, Don Voegele noted somewhat more such tropo occasions at his place. Overall, coastal condx were so-so, typical of this time of year.

Jan 30 eve – Feb 1	Variably fair+
(warming)	
Feb 2	None (some wind)
Feb 3 – 4	Very poor to poor
Feb 5 – 19	None (unsettled-
rainy Feb 5 – 17)	
Feb 19 eve	Briefly fair-good?
Feb 19 nite – Feb 24	Poor/barely fair/very
poor (showers Feb 22 – 23 am)	
Feb 25 – Feb 26	None (windy)
Feb 27-28 – Mar 1	Variably vry poor to
poor+	

Feb 8: I got together with Don at his place to look for TV signals (including any locals) with these TV rxs & outdoor antenna (no power rotors), east:

- 1981 13" Samsung analog CT 300 TM, Insignia(/LG) DTV box NS DXA1 APT, with VHF medium-range log antenna
- 2008 Sansui 19" flat-screen HD LCD 1908, 2008 LG 20" flat-screen HD LCD 20LS7D, with Finco UHF 5-ft dish antenna.

Update on malfunc SansuiTV (sound in&out): In mid-Feb, he took it to store and got refund. Feb-8 condx were normal with no tropo.

The Editor's Note

We're finally back with a column! Yes, the winter months have been utterly silent for us DXers across the east, but the good news is Spring has arrived and hopefully active conditions aren't too far behind. It promises to be a most intriguing season for TV DXing, and already fun has started for some near the Gulf Coast.

Before we look forward to dig into the 2009 season, we get a nice look at the latter half of Saul Chernos' 2008 loggings below.

Logging Hawaii in California

Now that we have several FM (and TV) DXers in (southern) California, it might be a good time to review the 'basics' of what it will take to 'hear' Hawaii on the infamous duct which appears sporadically between late May and September - sometimes even in mid-winter (but not often). The reverse path (California plus Mexico, et al) heard in Hawaii is the stuff of legends; Shel(don) Reynolds living at around 1,500 ' elevation in Hawaii has logged tens (hundreds?) of stations from the lower extremities of Mexico north to at least San Francisco but being a quite reclusive individual his exploits have never been properly detailed. Sheldon's interest in TV DX never matured so as we approach the end of the analog era (Hawaii switched off virtually all analog in January) the odds are neither he nor anyone else will find ducted (TV) reception in either direction anytime soon.

Observation of tropospheric ducts from Hawaii to the 'mainland' date back to at least the 1950s; the first hints came from airline pilots landing in San Francisco who, when switching to a 120 MHz region frequency to talk to San Francisco found Honolulu there instead as they were settling into the California landing pattern. John Chambers (deceased), W6NLZ, and a New Jersey transplant ham living in Hawaii (KH6UK) turned this knowledge into the first two meter (144 MHz) contact over the 2,500 mile

path and from those late 50's events all has flowed. Ducts vary in intensity, height, 'depth' and over the 50 intervening years much has been learned. First, the Hawaii end of the duct(s) nominally remains more elevated than the stateside end; hams in Hawaii often (but not always) have to go 'up' to elevations approaching 8,000 feet to break into the tropospheric layer while in California a 25 watt two-meter mobile on the shoreline in San Diego is 'perfect copy' on both VHF and UHF bands. On rare occasions the mainland side actually moves inland enough that hams in the Sierras well off the coast make the grade if their antennas are large enough and their power high enough. Hams as far north as British Columbia have at least heard the Hawaiian signals and from Seattle to Baja California there have been two-way contacts on 144 and 432 MHz. One time a ham in Reno, Nevada even made it across the Sierras!

Alas, working a Morse (CW) contact with a signal buried in the noise is one thing; hearing a Hawaiian FM station on the mainland is another. The primary problem is *not* the lack of signal; it is 'too many, too strong' signals - originating in California (or Oregon etc.). The first step is to get rid of the band-clobbering signals nearby and for any location in southern California that may not be possible. Every frequency from 88.1 to 107.9 is occupied, sometimes two, three or four times, between Santa Barbara and San Diego and while the Hawaiian signals could possibly be quite strong, they will seldom if ever be strong enough to override a much closer station.

Step one: Research and make a 'cheat sheet' of all higher power, elevated Hawaiian FM stations. Know their frequency, their format, and if they are in fact operating from an elevated location. Sheldon Reynold's experience at 1,500 feet ASL might be instructive; or it may not. Now find yourself a spot - no matter how difficult it may be - where you can set-up to listen on one or more of these identified channels without mind numbing overload from 'local' signals. Frankly, if I were making this my challenge, I would immediately search out a location between Santa Barbara and Monterey along or west of Highway 1, preferably right on the (Pacific) water around Grover Beach-Avila Beach, or better yet perhaps between Cambria and Big Sur. Here's why.

Duct signals wander up and down (elevation and area illuminated) as a function of time of day. Fifty years of experience tells us the 'at-water' seacoast locations usually work best between 3pm and 10pm but predicting when ducts will function for any given location is a fool's game. Next, have a way to know 'when' the ducts exist. The best suggestion I can make is to monitor the web site <http://www.dxworld.com/50prop.html> and look for reports from K6QXY (he is northeast of San Francisco) who can be counted on to report when there are ducting conditions to Hawaii. You can also once on the site click on '144 prop' at top for two-meter reports from others along the California coast. Not all ducts of course are created equal; some last hours, some days; some are strong, some are weak. Some favor 144 MHz, others 432 MHz or higher. FM (88.1-107.9) will be best when there are many reports of 144 MHz contacts between Hawaii and the west coast (even six meters or 50 MHz has made it on ducting on occasion). When K6QXY or others on that site say 'the duct is in' head to your pre-selected spot armed with your research; which frequencies to listen on, which format to listen for and note the easy to spot 'time zone' difference (Hawaii is typically two hours west of California).

The real advice here is to pre-hand-pick your DX-pedition location (just as Saul does in Ontario and Chris does in Michigan!) carefully, preferably in advance by making a test run to locate where you can park (a decent car radio may - 'may!' - be all you need) and have local shielding from the multitude of interfering stations along California's coastal area, on one or more frequencies known to be occupied by Hawaiian stations of moderate to high power and at some elevation. Would it be helpful to include a fold-up transportable FM antenna - even a Radio Shack version? Probably but if you are car-radio only, that presents a coupling challenge (not insurmountable but involving some wiring changes). The primary reason why I would seriously consider this option is to help with phasing out the unwanted California layers of signals. I have personally been on Mt Pinos (8,816 feet asl; drive to the top) off of highway 33 and south between Cuyama and Maricopa (northeast of Santa Barbara) with a suitable yagi under 'dead band' (summer) conditions and literally been able to log every FM station from Sacramento and San Francisco on the north to the Mexican border (a span of approaching 500 miles) with as many as ten (10!) on some channels. This is a wonderful spot NOT to try for Hawaii because you would never - ever - have enough antenna to eliminate one, two or five California stations on the same frequency. Plus - at 8,816 feet, you would most likely be *above* the duct anyhow. Remember - the great majority of Hawaiian ducts at some point stick to the ground on the eastern end which explains why one guy in San Diego actually made it to Hawaii with a two-meter handheld radio a few years back (oh yes - he had replaced the 'rubber ducky' antenna with a homebrewed five

(continued on page 39)

TV DX: It'll Never Happen Again

Bob Cooper

May 9-10, 1988

During my 11 years residing on the Island of Providenciales (Turks & Caicos Islands; 21.7942N x 72.1832W), when not 'commuting' to distant points on average two weeks of each month I was very active as an amateur (VP5D) including all bands from 1.8 MHz through 432 MHz. The location was seaside (under 5' above high tide point; yes, hurricanes were a challenge!) on the north shore of this 23 x 3 mile banana shaped atoll and the only thing between me and the entire eastern seacoast of North America from Miami to Nova Scotia was Atlantic Ocean.

With a background in TV (and FM) DXing, by 1981 or so it was always a point to have a decent set of TV aerials (Channel Master as a rule) around 30' above the sand dune we called home. Over the

intervening years until May 1988 I had an iron clad personal rule; when home, I kept a TV set running on channel 2, an FM tuner (typically a Heath AJ-15) on some not occupied FM channel. At the first signs of lines on channel 2 or audio from the AJ-15, several things automatically happened.

First I turned on a six meter/50 MHz transceiver and announced "VP5D QRZ" (which is ham talk for "I am here - anyone out there?") If there was sound from the AJ-15, I also turned on a two meter transceiver. Over the years I managed to work (and confirm) 49 of the 50 US states on six meters (missed Alaska during one of my away jaunts but had previously worked all states as K6EDX and W5KHT; the California award was the first-ever granted to a Technician Class licensee and is nicely hand labeled numbered #21 dated March 14, 1957. Yes, some of us are VERY old!). On two

meters/144 MHz there were 31 states within 1,500 miles of me and a direct result of my monitoring the FM band 24 x 7 when home was contacts with 26 of these. The Turks & Caicos proved to be rather ideally located for high intensity Es clouds in that era. May 9, 1988 would be one of these days.

As soon as Es appeared on 144 MHz a second TV set connected to a separate antenna came on and using a modification to the tuner it would scan channel to channel as directed until it found a signal. It helped that there were no local TV signals save my own WIV-TV on channel 4 and the on-off switch for WIV was at arms length from my operating position; if I wanted channel 4 'clean' it developed a mysterious 'problem' and left the air. My logic for such a high-handed approach ("TV DXing on channel 4 is more important than the lead-in to the local 'Six O'clock News'") was technically sound; during a heavy Es opening most viewers lost WIV anyhow to Jacksonville or Washington or who knew what from where! Most often it would be a :58 - 02 four minute loss - coinciding with station break time out there in Es land.

The two meter band opened on Es around 5:30PM local time, stations in North Carolina, Virginia, eastern Tennessee in the typical 900-1000 mile range. Several dozen went into my log before the channel scanning TV pre-set for 7 - 13 locked up on two images. They would turn out to be WITN-7 and WGHP-8; straight out of the center of the two meter contacts. Both had previously been logged and for a half hour or more WITN just kept sitting there out of Greenville, North Carolina. Then the two meter signals went away, as they often did in a fast moving Es event but WITN still sat there only now it had become very stable and just strong enough to allow me to be certain it was them. I found this strange but went to dinner; even VHF DXers get hungry. The Es on low band dropped out and six meters when checked was the usual assortment of mid-Atlantic states, none very strong but only May 9 (local time) and the Es season was still young.

It was close to 10PM when I remembered having left the channel 7 receiver running and returned to the ham shack to shut it down. Not quite - for now when I pushed the scan-tune button it stopped on

8, 9, 10, 11, 12 and 13; high band was filled with signals! WITN was now replaced with WJLA-7 and by midnight it would be WABC-7. A quick check of the AJ-15 revealed the entire FM band filled with various level signals, only a few strong, but all very stable. A light came on in my head; *'This is the Mother of All Tropo Openings!'*

No amplifier here - just bare Channel Master antenna straight into a then-modern Sony TV. This one would not have made it in digital.

The two meter rig promptly came back into operation along with a seldom used ('I wonder if it still works?') 432 MHz 100 watt transceiver. A third TV connected to a 7' UHF parabolic also fired up and a quick check revealed many snowy, actually quite weak, signals but strangely virtually all were above channel 40. I'd work that out later; too late, actually.

Someplace in New Jersey at just past 11PM a two meter ham would later tell me *"I fell out of my chair when you came up on 144.2 SSB under dead-band conditions and said 'QRZ - This is VP5D in the Turks and Caicos Islands'"*. Twelve-hundred mile-plus tropo out over the Atlantic Ocean with NO warning signs of any kind???

This one would probably have at least displayed ID information at peak upfades. The last signals seen, at 8AM May 10th, were Boston as the 'inversion trough' moved out to sea including channels 2, 4, 5, 7 and 38 (+)

The Mother of all Atlantic Coastal tropo inversions was away; more than 100 two meter and 432 MHz contacts spanning Maryland north to Maine, inland only as far as northern Connecticut and New Hampshire. Don Brown, W1JSM in Greenland, NH would scribe on his QSL card *"I heard you about S1 at 0315, you peaked S4 at 0425 (UTC of course); 1508 miles."*

The 432 signals with my modest (although large) single yagi and 100 watts were never huge but then I was hearing and working guys running as little as ten watts and small yagis. The VHF high band was slowly moving up the coast line at about 100 miles an hour; WJLA became WABC became WNEV on channel 7 and 8-13 were marching right along to the same beat. UHF-TV was now a puzzling distraction to serious ham work. It would be the following day after an all-night stint that quit only when my clock said it was 8AM on May 10th that the painful truth became clear. The power supply for the 2dB noise figure Blonder Tongue CATV grade UHF antenna mounted pre-amp on the 7' dish was not functional; the UHF signals that were leaking in (from such spots as

Right on the edge - perhaps 10 dB carrier to noise and well below what it would take to 'unlock' in digital, assuming a high quality 22 dB threshold tuner. But my oh my - 1505 miles on channel 13!

NYC, Connecticut, Massachusetts at distances reaching 1400 miles) were doing so through a turned-off non functional masthead

amplifier! Nuts and double nuts.

And I ran out of film of course or could not locate any under what might generously be described as 'stressful conditions'. In fact, the handful of off-screen images were shot with a film previously half used in a 35mm camera my son had stashed in his room (go into a dark room open the camera back, hand rewind the film leaving the tag so it can be reloaded into a new camera etc) all because his camera was not capable of being adjusted to F5.6 and 1/30th of a second.

The three shots shared here are representative: WNEV-7 Boston (1409 statute miles), WTNH-8 (1342 sm) and of course the corker - WGME-TV Portland on channel 13 at 1505 sm. Quite a 14 hours in all; every state along the eastern seaboard from North Carolina to Maine on high band, missing only Vermont in New England and New Jersey. But that was okay because one of the few UHF signals to make it through the dead CMA antenna amplifier was out of New Jersey.

"WOW! What a classic duct! Wonder how often it happens?" penned Rick Connor, WC2K on his 432.1 MHz QSL card from Tabernacle, NJ. Chances are that is a question we will never answer.

TV DX: When in doubt - check satellite!

Sometime in 1979 from Guthrie, Oklahoma

Way-way back in September 1978 shortly after I had installed a 20 foot/6 meter satellite dish in my side yard (an act that would haunt me for the intervening 30 years) there was a TV DX opening which brought to my 7' UHF Channel Master dish reception from well down into Georgia and northern Florida. These were the 'golden days' of TV DXing, the gear was quite sensitive, LPTV and other channel clutter had not yet begun and you could actually expect TV stations to run 4-8 hours of well identified test cards or patterns most days. So there on my TV screen was Atlanta's WTTCG on its

original UHF channel (17; by 1979 WTBS), fighting some co-channel at 750 miles or so but on occasion showing a decent picture. I thought it might be amusing to place this reception on one-half of a two (9") TV screen monitor set and then connect the WTTCG satellite signal to the side by side screen; WTTCG via two modes simultaneously - "direct" as it were on tropo and via satellite. Yes, the C-Band signal had a slight delay to it having traveled nearly 50,000 miles to the terrestrial's 750. I ran the side by side images on the front cover of CATJ (Community Antenna Television Journal) shortly thereafter and there was a giant yawn from the cable TV industry readers. Well, I liked the symbolism anyhow even if they did not appreciate the feat.

KTVU on Es and satellite. The zero beat frame bar would most likely be Tulsa on channel 2; a mere 90 miles from the Guthrie, Oklahoma receiving location.

Just in case you don't buy this to be KTVU - local advertisement for a San Jose (Ca) firm during the same Es + satellite reception.

Recently while attempting to identify and segregate a modest collection of more than 15,000 photographic prints which have chased me around the globe I ran across another similar set although this one involved not tropo but Es. Sometime in 1979, I suspect the month of May from the negative set, there was one of those Sporadic E openings which brought to me from Oakland/San Francisco station KTVU on channel 2. It happened that KTVU was also being trialed on C-Band satellite at the same time and having already done it once - twin screens side by side and so on - I made the appropriate hard wire connections and the result is here (twice -

although I actually shot around six different sets of side by sides - these two I happen to like the best). The zero-beat frame bar in the (Es) reception on the left? Without checking my guess would be channel 2 Tulsa which was snowfree at my home on an appropriate antenna at a more modest 90 miles (KTVU worked out to 1280).

Alas KTVU did not remain on satellite and as we are all now painfully aware, it is no longer available on channel two analog either. A fleeting memory never to be repeated again.

HAWAIIAN TROPO CONTINUES FROM PAGE 35

element two meter yagi but his power was under 5 watts; it works out to 0.002 watts per mile which is pretty good in anyone's book.)

TV? Sorry - the (analog) opportunity has passed and unless you are prepared to use a suitable antenna (such as Dennis Smith's five foot parabolic dish) and carefully select a location where the set top box might decode a Hawaiian UHF signal. The odds are against you but then if you did it, you'd have a distance record that might never be surpassed!

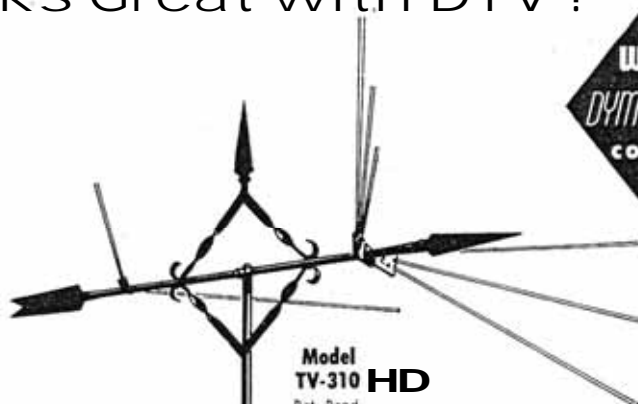

In summary, it has been a curiosity to me (after nearly 60 years of TV-FM DXing) that nobody has ever logged a Hawaiian station via ducting (setting aside double hop Es and F2) from the mainland. It is not really a big challenge but it will require some careful research and planning - and like all things DX - *Being in the right place at the right time - on the right frequency!*.

Bob Cooper in New Zealand

WARD TV Antennas

Works Great with DTV !

WARD'S DYMON-VANE CONICAL

**Model
TV-310 HD**
Pat. Pend.

WARD'S Dymon-vane is one of the new WARD Tele-vane TV Antennas. Tele-vanes, the newest concept in TV antennas, are designed to add beauty to the housetop and to make any owner proud to own one. With its black wrought iron appearance, the Dymon-vane has a weather-vane look that enhances the appearance of any home.

The Dymon-vane is an 8 element conical for VHF channels 2 through 13 in metropolitan areas, cross-arm 1" O.D. Permatube with flat black finish. Both models are new fold-up design with parabolic principle reflector and preassembled for easier installation.

Model TV-310—Single Bay. Individually packed. Shipping wgt. 15 lbs. ea. 6 units standard quantity.
Model TVS-315—Double Bay. Individually packed. Shipping wgt. 28 lbs. ea. 3 units standard quantity.
Model TV-77—Stacking Kit for stacking 2 two-bay units into 4-bay unit.
