AIPA Bulletin--Published first week of each month, 12 issues per year. Membership--\$2.00 per year (entitles one to monthly bulletins, report forms, membership card & miscellaneous items. Payable to secretary.

Editorial...

Well, ... July is here again, the annual AIPA convention is at hand in Speedway, Indiana and we prepare for a big month of DX of both E skip and increasingly better tropospheric (trops) DX reception. Double hop E skip should hit some areas during July. Also, UHF DX should be on the upward trend during July and into August and with it VHF trops may reach greater distances more often. So be alert!

Due to the convention and your publishers going to same, this month's bulletin is a little earlier regardless of number of reports. Late reports, if any, will be held over for August bulletin.

The remainder of the Equipment Tabulation listings are included with this month's bulletin. Thanks to all who sent in their Equipment sheets. Response was very satisfactory! In near future an article or articles will be written and published in bulletin as a "summary of equipment".

Anyone having difficulty getting WAIQ ch2 to verify, please send a self-addressed stamped envelope to your secretary, Bob Seybold, and will oblige with a special verification form for you to send to WAIQ ch2 to lure a verie from them. I am fairly sure they will verify with special form. I have a verie from them. Signer is Al Renfro, Chief Engineer.

Recent renewals include: Ed Hopp; Al Caldwell Jr.; Ivon Harris; B.H. Rauch; Carleton Lord; James Howarth; James Brown; Kenneth Stoll. Welcome for another year follas!

Our two new editors, namely, Walter Spaulding of Cardington, Ohio as the editor of "RANK" and Gordon E. Simkin, Loma Linda, California as the International DX editor both need as much material for their columns as AIPAers can possibly supply them with. So, please support your editors, one and all. I believe a good word should be put in here for Frank Hill, the former editor of "RANK" who did such a fine job and I know Frank will always be ready to lend a helping ~~h~~ hand. I see that our new editors, Doris Johnson and Gordon E. Simkin did a real fine job in their first efforts as AIPA editor.

Word has reached here that the westerners have been getting some real terrific E skip this past month including South America, double hop skip and lots of single hop skip. It certainly hasn't been anything like that here in the east, at least not the northeast. Even single hop openings have been rather few for the month of June, although whatever openings there were, were usually strong and prolonged. Trops has been rather good.

Deadlines for August bulletin are as follows: Longview, Wash., Cardington, Ohio (RANK column), Loma Linda, California (I-DX), July 25th; Buffalo (FCC News), July 26; Hot Springs, Ark. (CCI column), Shelbyville, Ill., July 27; Dunkirk, (Eastern reports), July 31st.

Watch your newspapers, etc, for firing of Aresbee rocket from Holloman Air Development Center at Alamogordo, New Mexico sometime in July.

Best DX & 73's to all -----RS

Low Band Locals-Part 2

The ability of knocking out your low band locals is very exacting, but the required equipment for the average Dxer is rather simple for all practical purposes. You probably all heard of the dipole method, well that is the basis of our system here, but it ~~must be pointed out that construction~~ of these dipoles must be correct and that a length of 300 ohm line on a wooden pole, or rabbit ears, isn't the answer.

For use on channels 2 & 3 we have a very simple unit. It is a straight dipole 92" long, each element being 45" long. The center insulator accounts for the extra two inches. This insulator may be constructed of wood for inside use, and plastic for outside use. An inch or so of extra insulator length is not critical. The elements themselves are stacking bar rods of 3/16 stock. They bend quite easily so when using dipole, take care. You could use stronger material if you wish, but make sure its proper antenna metal. All you do now is bolt the elements on the insulator, and add extra nuts and washers for the attaching of about 14' of good grade 300 ohm ribbon line. This will give you plenty of room for probing. I should mention that it must be flat line.

On channels four through six, we use the tripole stack of folded dipoles (2 high, one low) from an old Channel Master Champion. All we did was add a short length of tubing, about 6", in the boom socket, so we could mount the terminal block where the stacking leads are connected. On this block we attach our line in same manner as described above. I must point out that it is very important to keep the high band dipoles on this unit. Remove same, and you will not obtain satisfactory results.

With these two dipoles, and a outside antenna of fair directional qualities, you should be already to give your locals a hard time when that ole skip hits. It must be said that in application of these dipoles and other devices for this purpose, it's not going to be as easy as you may think.

When you first notice skip hitting on channels 2 or 3, attach your straight dipole in parallel with your outside antenna. Then turn outside antenna towards the weak point of your local, that it is nearest to the general direction of the skip. Usually a turn of about 90 degrees will do. Now make sure that your dipole and your outside antenna are both connected together on your receiver input terminals. Now take your dipole by the insulator (do not touch or let any part of the elements come in contact with your body or metal) and probe for the point where the beat pattern action of the offset carrier is the strongest. If you use this as a starting point, you will find a point where your local will "crack", and where the possibility to identify the skip will arrive. A fraction of a inch in position can make or break this chance for ID. You will however have to follow several other steps, before such is possible. These of course will be outlined later. Knocking out locals on channels 4 to 6, employing different methods, and those as well will be outlined. We will continue on this subject again next month.

A booklet that should be a must for all Dxers is by name, "Television Signal Analysis". It describes network transmission trouble effects, and various other data. It has some very valuable test pattern info also. For your free copy write: American Telephone & telegraph Co., Long Lines Dept., c/o - Mr. F. R. MacFarland, Division Commercial manager, Room 915, 250 Park Ave., New York 17, N.Y.

See you next month. Best DX & 73's,

King Schafer

- Ch 43 WEEK-TV Peoria, Ill. Oked to go up to 178Kw-91.1Kw.-Ant Change.

The FCC plans to make the Albany, Troy, Schenectady N.Y. area all VHF in stead of the proposed UHF. To make Ch 10 in VAIL MILLS; Ch 6 in Schenectady WRGB to stay... Shift ch 13 ##### in Utica to ##### Ch 2 in Albany submit ch 2 in Utica.. Ch 41 in Albany WCDA to Ch 10 in Vail Miles... Ch 35 in Albany, WTRI would go to Ch 13 there. WKTU 13 a change to Ch 2...

\*\*\*\*                      \*\*\*\*                      \*\*\*\*                      \*\*\*\*

James a. Brown of 3626 Hawthorn Dr. Jackson, Miss is a HAM, W5DRP and would like to hear from other HAMsto more or less form a AIPA net of some sort. There are many of our DXers who operate HAM stations so please drop James a line.

Again to those who want report forms (IF you don't already receive them) just drop a 2 cent card to King Schafer and request them. This will answer Harry Websters request. By the way Harry reports godd reception of the DX Test , CJIC-TV ch 2 .

Hank Ward of Ponca City, Okla. reports wonderful Skip and Gr. Wave. with a list of stations a mile long, Coast to Coast. By all indications the E-Skip has andis good all over .

Art Collins

Well to start with I was hoping Frank would make up this column but I guess his work at home prevents him. So I will try and do this column. I will need your reports to keep it going and I am sure you will send them. My address is R.D. 3 Box 168 Cardington, Ohio. Walter W. Spaulding.

Would like to have you send me your reports of veries and there signers.

Bob Seybold sent me a verie and a few sign ons.

KBTX-TV Ch 3 W.B.Cox, CE, East 29th St., P.O. Box 3237, Bryan, Texas--uses RETMA chart TP

KOTI-2 Test pattern with call on at 1400 EST

KLRJ-2 CBS test pattern with call on at 1300 EST

KLEW-3 On at 1300 EST

KBES-5 On at 1300 EST

KIEM-3 On at 1400 EST

Thanks Bob, hope to meet you at the convention.

Here are a few more veries that I have as I haven't received any other reports yet.

WBEM-TV 2 Chicago, Ill. (CBS) L.A. Biem Manager T.O.

CBS-TV 2 485 Madison Ave. New York, N.Y. George V. Sherman

WCIA-TV-3 Champaign, Ill. 509 South Neil St. Robert L. Meyers OE.

WROV-TV-3 Philadelphia, Pa. William A. Howard Supervisor TV TO.

WBEN-TV-4 Buffalo 2 New York. no signer

WJAO-TV-6 WJAO Buidling, 329 Main St. Johnstown, Pa. Frank P. Cummins PD.

WXYZ-TV-7 1700 Mutual Building, Detroit 26, Mich. Charles Koehner OE.

WFBG-TV-10 1320 11th Avenue Altoona, Pa. K.R. Brubaker OE.

WFBG-TV is located approximately five miles north of Altoona, Pa. on Wopsononock Mountain. Ground level at our transmitter site is 2,580 feet above sea level. Antenna hieght is 169 feet above the ground and 980 feet above average terrain. They transmit with 316,000 watts vidio and 160,000 watts audio. The antenna is a General Electric J2 Bay.

\*\*\*\*\*

WOET 48 Cincinnati is the first educational station and will be increasing there programing to 40 hours a week this fall. Also are putting in more eqiptment.

\*\*\* \*\*

Well I see where I have made a few mistakes but I hope you will be able to make them out. I don't have any more to print as I haven't received any reports. Hope to be able to have more next month. 73th to all Hi Hi

Walter W. Spaulding R.D. 3 Cardington, Ohio

Another month is past, but there is very little news from the AIPA members for this column.

Clarence Rareshide of New Orleans, La., reports that he "as well as the other 2 DX'ers (t)herd have been receiving Cuban programs from OMBF on channels 3 and 4." Now OMBF is listed only as channel 7, Habana. The question is, where are these relays located? So far I haven't had time to write to OMBF (I moved during this last month and I'm just getting settled. My mailing address is still the same.) but I will soon. In the meantime, if anyone has any other information on these stations, please send it along.

Frank Hill of Gallipolis, Ohio, sent a verie that he received from OMAB-2 in Habana, Cuba. This is the key station of the Tele-Mundo, S.A. network. Other stations of this net are: Santiago de Cuba-7, Santa Clara-8, Camaguey-9, Mahanzas-11, Jatibonico-12, and Victoria de las Tunas-13. They also display a CBS eye on their stationery. Frank also tells that the CMQ-6 calls itself "Tella Villa" like OMAB-2 calls itself "Tele Mundo." He notes OMAB-2, CMUR-4, CMHQ-5 and CMQ-6 on the air with programs and test patterns as early as 0730 EST.

Morris Foote of Middleton, Idaho, reports XETV-6 on May 22 at 1450 to 1500 EST. Then on June 17 at 2200 to 2220 EST and again on June 20 at 2330 EST, he saw an unided on channel 5 with Spanish sound. At the same time he saw KROD-4 in El Paso, Texas. No doubt the channel 5 station was XEJ-TV in Juarez, Mexico, which is just across the border from El Paso. I have no address for them, but I do have one for XETV-6, which is now ABC. Mail to: XETV, 4229 Park Blvd., San Diego 3, Calif. XEJ-TV no doubt has an El Paso address, and letters for veries could be written in English, I'm sure.

Stanley J. Ponce of Utica, N.Y., is getting set for Europe TV-DX. He has been corresponding with me on details of how to use his 24" Sotchell-Carlson for this purpose. He already has a "police alarm" radio that tunes 30 to 50 Mc, and a S-106 Hallcrafters 6 meter receiver. He has logged both the BBC and Franco TV sound with the police alarm radio.

In my last column I spoke of using the radio paging stations (35.58 and 43.58 Mc) as indications of general band conditions. I have been monitoring these frequencies at work when time permits, and have found DX there almost every time there was TV-DX. KUA 217 in Honolulu, Hawaii, is still coming in at times. On the basis that the  $F_2$  DX follows a 28-day cycle, and my log of KUA 217, (35.58 Mc) I'm going to make a prediction. The  $F_2$  should peak around July 6-9, the 17th, and 21-24. These peaks will probably not reach the TV channels, or even 6 meters, but I would appreciate reports from anyone who can tune 30 to 50 Mc, as to any DX over 1500 miles, IDX or not.

Speaking of receivers to tune this range, there are four different models available from Allied Radio. The "police alarm" sells for \$50, and has a 10uV sensitivity. Others sell for as much as \$150, but the best buy would seem to be the Hallcrafters S-94 with 1.5uV sensitivity for \$60. They are all FM receivers, but AM would no doubt be understandable, or they could be converted to AM. Kuhn Electronics of 20 Glenwood Ave. in Cincinnati, Ohio, makes tuners for this range. They are intended to be added onto a car or home radio (not AC-DC ones). They have neither power supply nor audio amplifiers built in. The two best models are the 306-A, a two tube unit, which sells for \$22.50, and the 306D1, a four tube unit, which sells for \$34.50. They tune only 10Mc, therefore, the 40 to 50 Mc range would cover the most foreign TV sounds. I am trying to find out if any of their tuners could be used with a TV set. If so, I will purchase one and publish details of how to use it with a TV set.

Of possible interest, is the fact that all observed TV-DX by  $E_s$  at this location falls right into the  $F_2$  pattern, usually peaking just before or just after the  $F_2$  peaks. On this basis, I will suggest that you watch your TV for  $E_s$  DX as follows: July 8-12, 15-17, and 21-24, August 3-8 and 11-14.  $E_s$  is apt to drop rapidly after that, but  $F_2$  should start picking up.

That's it for this month. Thanks go to Clarence, Frank, Morris and Stanley for sending in IDX material. I would like to hear from all AIPA members as to what they'd like to see in this column, and PLEASE send in all IDX reports.

—Gordon E. Simkin (W6KUH)

Total logged 54, with 16 new lately.

Gorden Simkin of Loma Linda, California: May 29 and 30, unideds on ch. 2,3, and 4. June 11, KFDX-3, unided on ch. 2 and 4, and KLEW-3 June 13, KMTV-3, June 17, KFDX-3, KMTV-3, WOW-6, and unideds on ch. 5 and 4. logged to date 24.

Well, thats all the reports that came in this month. Your editor here sure had a scare on June 13, at about noon PST. We had a storm, and a bolt of lightning hit my antenna, which was up about 35' and snapped all the guy wires in-two, and knocked the mast and antenna down on roof. Lucky for me I had just unplugged the antenna from the TV set just before it hit, or I probably would have had TV parts all over my living room. Best DX to you all, see you next month,

Doris Johnson
