Thanks everyone for your support of the WTFDA!

This month we welcome Henry Slade (N8OTJ) and Stan Olson (K9SWX) to the WTFDA. Stan is located in Champaign, IL while Henry is in Ohio. Welcome to both of you!

A note from Cal Glover on the Outer Banks: "Enjoyed, as always, the latest *Digest*. This repack looks like a real disaster for fringe reception. I've noticed that some of my Hampton Roads stations will be moving to weaker ERPs with the repack. Dunno what that's all about. But I did notice an encouraging sign this (Thursday) morning, when I flicked on the "garage" TV, which is cable-free and hooked to an outside antenna. Baltimore's WMAR (2); Salisbury, MD's WBOC (16); and Richmond's WTVR (6) were coming in strong and stable. So I guess a little tropo is working up there. At the same time, the much closer (70 miles away) Hampton Roads VHF channels 7 and 13 were nowhere to be seen. Go figure.

And that's all we have for this month. See you next time.  
-Mike

**September 2017**

We have a massive number of repack-related channel changes this month. I'm dispensing with "Requests channel change from..." and simply typing "From". Also, my word processor was upchucking with the massive tables so I'm afraid I've had to dispense with the state flags.

Location	RF Ch	Callsign	Notes
<b>Aguascalientes</b>			
Aguascalientes	29	XHLGA-TDT	Granted power reduction to 19.66kw/117m, 21-51-43/102-13-36

-----------------	-----------	----------------	----------------------

Our first more-than-two-way sharing agreement is on the books. The host station is WEDW Bridgeport, Connecticut. (currently on channel 49, being repacked to 21) It will host co-owned WEDY New Haven and separately-owned WZME Bridgeport. There is no hard-and-fast limit, either regulatory or technical, to how many stations can share a channel. I will be surprised if we see more than three and amazed if we see more than four.

All that said... it appears in mid-August, WEDY withdrew from this sharing group. *I think* it's going to share with co-owned WEDN Norwich instead, but that's speculation at this point.

We are now seeing a trickle of displacement applications for LPTV stations which will be losing their channels to the repack. So far, all the LPTVs applying to move are being bumped from channels above 37. I expect we will soon see some displaced from channels below 37 by repacked full-power and Class A stations. Again, remember that full-power and Class A stations are *guaranteed* new channels if displaced by the repack – LPTV stations are *not* guaranteed new channels.

I've worked through the list of post-repack tech parameters and their status. Of the 2,079 transmitter facilities which will remain after the repack, 1,084 aren't making any changes. 899 have filed for their newly-assigned channels & received FCC approval. 73 have filed but have not yet seen FCC action. 23 stations have received waivers of the July 12<sup>th</sup> filing deadline for various reasons.

Interference to land-mobile operations is the most common reason for waiver. Seven stations reassigned to channel 14 believe it will be impossible to install adequate filters to prevent problems. A Louisiana station was assigned a channel (17) that other FCC regulations prohibit it from using due to the Offshore Radio Service. KSEE in Fresno was assigned channel 16 in the original digital transition. Land-mobile interference problems forced them off that channel and to channel 38. The repack assigned KSEE to... channel 16.

Five stations found their existing towers aren't strong enough to support the necessary antennas. Three will relocate elsewhere; two are still working on their options. An antenna shared by five stations in Salt Lake City won't replicate existing coverage with the assigned facilities. One of the five stations (KUED) was reassigned to channel 15 – which cannot be practically accommodated with the shared antenna. KUED will seek channel 27 instead.

As noted earlier, the FCC no longer regards all UHF channels as equal, as regards coverage. Stations repacked to lower UHF channels will find their powers reduced. In the case of WUVG-DT Athens, Georgia, the power reduction from 1000kw (on channel 48) to 596kw (on channel 18) left the station's Atlanta transmitter site unable to achieve the required coverage of Athens. (it doesn't help that Athens has since annexed some land – the city is geographically larger) WUVG will seek to keep 1000kw on their new channel.

WHSV-TV Harrisonburg, Virginia is too close to the National Radio Astronomy Observatory in Green Bank, West Virginia. Its existing facility on channel 49 is grandfathered, but the NRAO won't allow a non-directional operation on channel 20. The most power they'll approve in the direction of Green Bank is 200 milliwatts. (1/5 of a watt) That's not enough to cover Harrisonburg. WHSV is seeing other solutions.

In East Tennessee, WETP-TV has been operating with a non-directional antenna. Somehow, a *directional* antenna – unique to WJXT Jacksonville, Florida – was assigned to WETP's record. WETP received waiver of the deadline while they modify the database to reflect the correct antenna.

Probably the most interesting reason for waiver is at WUNF-TV Asheville, North Carolina. There's no way to get a new transmitter, antenna, or the equipment to install it to WUNF's Mt. Pisgah site; nor is there any way to remove the old gear.

The site cannot be reached by road. Existing equipment was delivered by a funicular railway. The North Carolina Department of Labor ordered the railway closed in January 2015 for safety violations. WUNF doesn't have the ability to repair it – because the site, and the railway, belong to Sinclair, owners of WLOS-TV whose tower WUNF uses. WLOS hasn't been repacked (it's on physical channel 13) so they don't need to fix the railway to fulfill their obligations under the transition. The site *is* accessible on foot, albeit over a 1.6-mile trail. Hauling a channel 20 antenna – or a transmitter -- up that trail on foot is not going to happen.

One station in the list will not be bothering with finding a new facility. KHPB-CD Bastrop, Texas appears in the FCC data as repacked from channel 45 to channel 16. The KHPB license was canceled on July 14<sup>th</sup>.

We've had a number of recent applications for auxiliary backup transmitters. Two are for operation on stations' existing pre-repack channels. Two are to replicate pre-repack backups on new post-backup channels. One is for a post-repack backup at a station that doesn't currently have one. (one might presume they intend to use it while they replace their existing antenna)

Two are for stations which aren't moving to new channels. However, these stations share towers with stations that are moving. Presumably safety prevents these stations from operating at full power while work proceeds on their neighbors' antennas.

Some time ago, a number of us noticed the FCC was running short on LPTV call letters on certain high-VHF channels in the West. With calls like K07ZR, K09ZB, and K13ZS on the books – and with repacking potentially forcing some UHF LPTVs onto VHF-high – we suspected the letters would run out. And we wondered what the Commission would do when that happened.

In late August, it happened. We noted the callsign K13AAD-D assigned to the former K42IW in Long Valley Junction, Utah. I don't know why there is no K13AAA, K13AAB, or K13AAC. I suspect the FCC sets aside call letters when the application is filed, but doesn't put them on public notice (or in the database) until they determine the application is “acceptable for filing”.

# FM TRANSLATORS FOR CLASS C & D AM STATIONS

2017-08-08 D. Smith

Notes indicate reason for dismissal:

- (1) Class B station, must wait for next window.
- (2) Filed in 2016 window, not eligible in 2017.
- (3) Form 175 (for auction participation) not filed.
- (4) Applicant is not licensee of primary station.
- (5) Same primary station filed more than one application.

Application pairs *in italics* appear to be mutually exclusive.

------	------	------	--------	----	-------------------

Es in the west this season have been dismal so far. June 30 was busy with some new ones but I wasn't able to get in on it all.

A correction to my last report: 5/18, KJIL 90.7 is in Copeland, KS not Sharon Springs, MT...not sure where I came up with that location

# HAITI

## Solidarity Meets Survival.

*story by Jim Thomas*

***“When you live in Port-au-Prince, you may not know the name of the place, but you’ve seen it many times. It’s the mountain top with at least 10 different radio towers.”***

Those are the words of Gerard Schut, a global hiking trail expert from Italy. In 2015, he took on the Boutilliers Observatory trail, a 7.25 mile trek clinging to the perimeter of the Boutilliers summit. Boutilliers, which is five miles from the village of Petion-Ville, is the home to every AM, FM and TV signal that blankets the city of Port-au-Prince.

Schut continues with his suggested tour guide directions. “Drive to the observatory and park there. From there, the hike starts from the paved road, but soon turns into unpaved road and eventually will turn into a hiking trail. For the first four kilometres, the hike will go downhill. The next 4 km are uphill and can be quite steep from time to time. During the first half of the walk, you will have a view over Port-au-Prince while you walk through a quiet and green mountain. You’ll hear the buzz from town, but it will be surprisingly different than in town.

Once you get back to civilization, you will see a mix of the big houses and small sheds. It seems that the rich of Haiti live around here.

The second part of the hike is over the top of the mountain, largely on paved road. There is still some uphill hiking, but

# HAITI SOLIDARITY MEETS SURVIVAL

it's not too hard on this road. Part of the time there will be large walls along the road, but there is still plenty of places where you have a view to the north and the south valleys.

Near the end of the walk, you will see the communication towers and follow the road towards them. At the end, you walk around them and get back to the observatory where you have earned a nice refreshment and maybe dinner?

This walk is obviously best enjoyed during a clear day and I recommend to do this walk in the afternoon. If you start around 2 pm, you should be well back before sunset, which you can enjoy from the observatory.

Remember to bring plenty of water and your camera. If you have one with a good zoom, you may snap a few nice pictures of town from the hills."

The Boutilliers Observatory, peak and trail are just the type of place the residents of Port-au-Prince look to go to, to briefly forget about the troubled history of Haiti and also events in recent years there. Some might say that the people of Haiti are not "playing on a level field". In French it translates to, "règles de jeu équitables" - a situation in which everyone has a fair and equal chance of succeeding. Haitians, or Ayisyen, in Haitian Creole, are not known to run from their troubles.

Beverly Bell, a writer for The Huffington Post, made the observation about the people of Haiti, "What saved many during the earthquake, Hurricane Matthew, the cholera epidemic and what is keeping them alive today, is a culture and economy of solidarity, or mutual aid. Solidarity is an essential strategy through which on-the-margins communities, and their individual members, can survive and thrive. Today the generosity is on overdrive."

Yolette Etienne, a development worker in Haiti, commented: "The tremendous chains of solidarity of the people we saw from the day of the earthquake and on: That is our capacity. That is our victory. That is our heart."

**IN THE AFTERMATH** of Haiti's devastating earthquake of January 12, 2010, one small radio station became an information lifeline for the people of Port-au-Prince.

4VRE at 90.5 fm, also known as Signal FM, managed to stay on the air during the earthquake. At the time, station managers didn't know if the radio station would stay on, but they put the computer on to play continuous music while its employees fled the building. Surprisingly, the station's studios and broadcast tower survived the 7.0 magnitude earthquake. When power failed, they returned to get the station running again with multiple generators. It became one of the few places stunned Haitians could turn to for information and directions in the following days.

Station manager Mario Viau told news reporters, "We say that the only way communicate with the people and the world is to stay on. And we stayed on."

Signal FM managed to remain on the air for nearly two weeks following the quake, though occasionally broadcasting at reduced power. At first, it had only three days of fuel to keep its generators going, but the Haitian government and private organizations contributed more.

One of the tens of thousands that ended up in a refugee camp, is 22-year-old Louis Richardson, whose mother, father, brothers and sisters died in the quake. Taking shelter under a tree from the stifling heat, he told news reporters that Signal FM is "the most important source of information now."

**EXISTENCE.** Most outsiders are puzzled how those living in Haiti manage to even exist. Take that of the one-time outsider, Paolo Woods. Woods is recognized around the world as a respected documentary photographer.

Growing up in Italy as the child of a Dutch mother and a Canadian father, Paolo Woods was fascinated by the notion of the state. How does where you live, and how you live, shape individual and national identity? To find out, he moved to a country most often described as anything but a state: Haiti.

"When you see Haiti in the press, it is almost always described as a failed state," he said. "How does a failed state live? Who takes the place of the state? How is society organized and how does it reorganize on the corpse of a failed state?"

Mr. Woods, 46, has been exploring those questions since late 2010, based out of Les Cayes in southern Haiti and traveling with the journalist Arnaud Robert for a series of stories dealing with everything from religion to the country's oligarchs.

In Haiti, a country where illiteracy is at 85%, radio is the king for distributing news and entertainment for the masses. Radios are a major part of Haitian culture. Almost everyone - children, teens, women and men in Haiti listen to radio. Statistics show that over 97 percent of the country's population own a radio set and at least 350 licensed FM radio stations are in operation.

As Woods made the observation, every influential person in Haiti in need of audience gets space on radio. Catholic nuns and voodoo priests get their share to broadcast religious material. In 2012, Woods and Robert took a photo-journalism display on the road, called "Radio Days", featuring modern Haiti radio stations. It was featured in museums in New York and Paris.

4VMY, Radio Macaya 102.5 FM, in Les Cayes. Marie Lourdes Jean Pierre is a mambo, or female Voodoo priest. Every Sunday she hosts a program about her religion, countering the negative stereotypes promoted by Protestant missionaries.

# HAITI SOLIDARITY MEETS SURVIVAL

In addition to Haiti's illiteracy rate, only 25 percent have regular access to electricity. That means most Haitians do not read the country's only daily newspaper, regularly watch television, or spend hours surfing the Internet.

But they can listen to the radio. And Haitians do listen. ALL THE TIME. According to Woods, the radio "is always on" in Haiti. It is playing everywhere - in the shops and restaurants. "It is like background sound".

Since the introduction of battery-operated transistor receivers in the 1960's, radio has been the main media in Haiti. American missionaries donated the first transistor radios, hoping to convert the masses through the 24-hour evangelical programming on Radio Lumière. Radio Lumière even distributed radios that would only tune to one frequency - theirs. But in the hellish years of the Duvalier dictatorship, Haitians far preferred the radio programs in Creole broadcast on Radio Haiti Inter by legendary opposition figure Jean Dominique, to being constantly reminded about hell awaiting them if they did not become Protestant.

When the Duvalier era ended in 1986, independent radio stations blossomed and have been a fixture in Haitian daily life ever since.

Haitians are not passive listeners, either. Not only do many shows rely on call-in contributors, but many Haitians have taken to broadcasting themselves. Broadcasting material and operations are relatively inexpensive, so very small groups of people can mount and operate local radio stations. Thus, there are hundreds of radio stations in Haiti. And this has presented itself as a problem for CONATEL, the regulatory agency that issues licenses for radio broadcasting operations. Haiti is currently experiencing double the number of radio stations operating on the FM dial that hold a license from CONATEL. Whether

**4VTD 97.3 RTMS FM, Les Cayes**  
DJ John is on the air mixing Haitian music and American R&B. RTMS relays for a couple of hours each day Radio Voice of America. People in Les Cayes suspect it receives American money for this reason and some refer to it as Radio CIA.

the station is legal or illegal, they closely mirror society in almost all its political, religious, and social variations.

Radio has a crucial importance in the daily life of Haitians. Radio waves reach remote areas that cannot be reached by 4x4 vehicles. Easily available batteries or solar power radios ensure that people can stay tuned in. Ninety-seven percent of the population owns a radio, and they all listen to it.

Besides the ubiquitous Kompa music, radio stations host endless political discussions, inflamed live broadcastings of European football, proselytism by dozens of religious groups, local news and educational programs. Haitian president Michel Martelly was a former Kompa star, and when he entered the presidential race in 2010 he had absolutely no political experience. But he had millions of dedicated followers who knew him through the Haitian radios, where his music is on constant rotation. When the cholera epidemic broke out in 2010, radio stations bombarded listeners with instructions on avoiding the deadly disease and getting help for their sick. This was vital especially in rural areas, in most of the country, as Haiti had not known a cholera epidemic in at least a century. Experts agree that radio stations have been essential in saving lives.

Woods has photographed a selection of DJ's and announcers of different radio stations in Les Cayes, the city in the south of Haiti where he lives. The city, with a population of 50,000, has an estimated 30 FM radio stations, one for every 1300 people, but even this figure likely understates the number of radio stations. Many stations don't register so as to avoid paying taxes. The announcers are journalists, politicians, community activists, Vodou priests, students, nuns and pastors. The broadcasting equipment is often very bare bones. A used transmitter, mixer, antenna and generator can cost as little as US \$2500 and housed in a few free square meters wherever space is available. Woods also photographed, in a 100 meter radius around his house, a sampling of the actual radio receivers used by his neighbors. These varied from old, bulky cassette players to recent cellular phones.

On a recent afternoon, Woods was walking down the main street in Les Cayes with Franz Nazaire, one of the local radio hosts. He was recognized and greeted by dozens of listeners. He turned around to me and smiled, "You see? In Haiti, video has not killed the radio star!"

# DISASTER ON HAITI'S FM AIRWAVES

# HAITI SOLIDARITY MEETS SURVIVAL

Center: CONATEL Director General Jean-Marie Altéma,  
 Left: Chief Engineer Jean-Claudy Balan  
 Right: Engineer Myrthil Alexandre

On September 2, 2016 the Director General of CONATEL, Jean-Marie Altéma, held a press conference that essentially turned into an emergency management conference for Haiti's FM radio airwaves. Mr. Altéma explained the importance of broadcasting in Haiti and the role it plays in the socio-economic development of the country through its access to information, education and entertainment. Mr. Altéma then

informed the media there are serious problems with Haiti's FM spectrum management across the country and was ordering an immediate investigation and inventory count of all operating FM radio stations. He said there are more than 350 legally authorized radio stations operating in Haiti and another 347 unauthorized or irregular or illegal operators operating on national territory. Despite this, we are receiving more and more requests from those who want to have a radio frequency while the frequency band is largely saturated for certain zones. Mr. Altéma said that due to the extreme nature of the FM band in Haiti, he was ordering an immediate moratorium on new FM licenses until the illegal operators could be addressed. Additionally, Mr. Altéma said that an emergency broadcast plan was being implemented. The emergency plans for managing FM frequencies were to be a temporary change in the authorized power allocation per zone and were to change, as follows: All FM radio stations in Port-au-Prince were to reduce to 1000 watts power; Cap-Haïtien: 500 watts; Les Cayes, 500 watts; Gonaïves, 300 watts. Mr. Altéma said that is called Pipeline Plan 1. Pipeline Plan 2 includes the following zones and powers: Jacmel/Gonaïves, 300 watts; Miragoane/Jérémie, 300 watts; Hinche/Port-de-Paix, 300 watts.

Finally, the Director General of CONATEL also highlighted the problem of interference caused by several radio stations to aeronautical communications. This sometimes prevents better communication between airline pilots and the National Office of Civil Aviation (OFNAC).

Mr. Altéma explained that they have also seen a kind of war between the radio stations, with some of them increasing their kilowatts disproportionately, in an attempt to overpower another nearby radio station operating on the same frequency. Mr. Altéma commented, "They do not take into account technical criteria such as, location of the antenna towers and power limit."

The Director General of CONATEL also announced a package of measures against offenders. An inspection work on antenna towers has already begun for several weeks and there will be a geo-located identification of these towers. Given the saturation of the frequency bands, Director Altéma took the opportunity to announce that requests for new frequencies will not be received because there is no way to satisfy them.

Antenna Transmitter Park in Hinche, Department of Centre, where several unlicensed radio stations were operating.

Hinche, Department of Centre

## CONATEL Haiti Shuts down 7 Radio Stations and 3 TV Stations

On Thursday, March 21, 2013, CONATEL shut down 7 radio stations and 3 television stations, saying that all of the broadcast facilities were operating illegally and without a license.

The stations were: Super Continental Radio, 98.1 FM; Prince Fm, 97.3 FM; Radio Africa, 94.7 FM; Centre Inter Radio, 98.9 FM; Daily Radio TV, 95.5 FM; Radio Tele Men FM, 89.1 FM; and the TV station Leve Kanpe were shut down. All of the transmitters were seized by the departmental director of the National Council of Telecommunications (CONATEL) Pharel Marseilles.

### 4VJU 94.1 FM Liancourt

Radio Jupiter Plus 94.1 FM Liancourt launched on August 6, 1997 and is a talk and music channel that broadcasts nonstop Creole/French Talk and Haitian music from department of Artibonite.

4VMQ 96.9 FM Cap-Haïtien

*What's the top hits on the Zouk or Kompa charts???*  
 On your next Haitian E-skip adventure, tune in to 4VMQ 96.9 in Cap-Haïtien. Audiences can enjoy a variety of programs including news, info, sports, cultural, and regional stories. Zouk, Reggae, Kompa, Dance, Hip Hop, Rock, Jazz, etc., are mixed with the contemporary genres and world music to serve a large number of listeners.
