

YOU WILL

# PROFIT

3 WAYS

when you sell the Square Root  
all channel TV and FM antennas

**YOU PROFIT** from customer satisfaction  
Satisfied customers are your best  
new set and antenna salesman

**YOU PROFIT** from high volume  
Low cost and high quality insure  
rapid turnover

**YOU PROFIT** from liberal discount

## Quad-Loop<sup>®</sup>

ALL CHANNEL TV FM ANTENNA

Quad-Loop, a quadrature-phasing antenna, combines all the advantages of a mechanically rotated antenna with the low cost of the fixed type. Electronically rotated at the receiver by a single control, Quad-Loop selects maximum gain for each channel, regardless of the geographic location of the transmitting station. There is no rotated antenna regardless of cost which will surpass Quad-Loop performance.

## Di-Loop<sup>®</sup>

ALL CHANNEL TV FM ANTENNA

Di-Loop is a high-gain antenna. Simply constructed—a loop and a dipole element—of sturdy all metal design, Di-Loop insures speed installation and a long life of excellent performance. A leading radio manufacturer tested 30 antennas in this price range and found Di-Loop outperformed all the rest.

## Wind-□-Loop<sup>®</sup>

ALL CHANNEL TV FM ANTENNA

Wind-O-Loop is a completely novel approach to the problems affecting apartment house or restricted zone installation of television receivers. Constructed of a single rectangular loop and a dipole element, Wind-O-Loop is attached to the pane of any window, indoors or out, by means of two rubber suction cups. An all channel antenna, Wind-O-Loop may be oriented through 180° and permanently clamped for maximum gain.
