C)

WORLDWIDE TV-FM DX ASSOCIATION

Serving the VHF-UHF Enthusiast

THE VHF-UHF DIGEST IS THE OFFICIAL PUBLICATION OF THE WORLDWIDE TV-FM DX ASSOCIATION, DEDICATED TO THE OBSERVATION AND STUDY OF THE PROPAGATION OF LONG DISTANCE TELEVISION AND FM BROADCASTING SIGNALS AT VHF AND UHF. WTFDA IS GOVERNED BY A BOARD OF DIRECTORS: TOM BRYANT, GREG CONIGLIO, BRUCE HALL, DAVE JANOWIAK, AND BILL THOMPSON.

Editor/Publisher: Bill Thompson
Circulation: Mike Bugaj Comptroller: Dave Janowiak

Editorial Staff: Tom Bryant, Greg Coniglio, Victor Frank, George W. Jensen, Jeff Kruszka, Fred Nordquist, Doug Smith, Thomas J. Yingling, Jr., John Zondlo

ANARC Representative: Jim Thomas Back Issues: Dave Nieman
Original Cover Design: Harry Hayes

FROM THE STAFF:

IT'S HERE (almost)... After months of planning, Jim Thomas and the club's marketing team have the "TV STATION GUIDE" ready for the presses. Doug Smith compiled more than 250 pages of maps of transmitter locations along with other data. John Ebeling will be handling distribution. Be on the lookout for a sample page and details of the guide's contents in the February VUD. Members who have previewed the maps are unanimous in their praise. Now, the best news. Between February 1 and March 1 the guide will be available at the special pre-publication price of \$17.95. After March 1 the cost goes up to \$19.95 for hobbyists and \$23.95 retail [prices include shipping and handling]. Please mail your order (including payment) to WTFDA at the club's Somerville, CT address.

SKIP BRIEFS: Between the end of the 'normal' skip season and mid-December there have been an unusually high number of E-skip loggings. A British DXer, quite by accident, taped audio on U.S. channel 6; and while the propagation mode is uncertain, the catch was confirmed to be WECT-tv (NC). While none of the meteor showers produced much useable DX, there has been a lot of east coast to west coast F2 activity just below channel 2. There's more detail on all of these items elsewhere in this issue.

WTFDA WEB PAGE: You're invited to take a look at our updated web site. Webmaster Tim McVey has put a lot of time into re-working the original data, adding color and java features, and giving the overall appearance a sharp new look. The 'home' page was intentionally kept simple to enable fast loading. Be sure to check the links. There is a lot more material to be added as time permits. The URL has changed to http://www.onorc.org/wtfdo/. Again, thanks to David Austin for his service as webmaster. Thanks also to Ralph Brandi of ANARC for assisting Tim McVey make the transition. [Here's a reminder for those who have links to the club page on their personal pages; be sure to change the URL.]

SPEAKING OF ANARC: The Association of North American Radio Clubs will again host the "Winterfest" DXer gathering in Kulpsville, PA March 10-12. More information is available at http://www.trsc.com/winterfest.html>.

WANTED: ETVDX Column Editor. Please apply to any member of the Board of Directors. This is an excellent time to assume a post of this nature as the reports are generally quite sparse at this time of the year. You'll get plenty of advice and support from other editors.

HAPPY Y2K...JANUARY 2000

Well, its January and here we are. This is the month that comes around once in a thousand years. How am I ever going to get used to writing 2000 on my checks? I can see where I will be voiding out quite a few of them until my hand remembers what year it is. Hope everyone has a really fine New Year, free from any Y2K glitches. It's time to tell you the names of the two newest WTFDA members. Welcome aboard to

Harley Steward of Erie, PA. And next we have Jorge Aloy in La Plata, Argentina who joins the club thanks to an anonymous WTFDAer who read about the Buddy System in the VUD. We are really glad to have both of you in the club. I hope you enjoy it here. Moving now to renewals, we have Marvin Shults, Lenny Goldberg, Matt Sittel, John Jefferson, George Rogers, John Adams, John Rieger, Mike Collins, John Kosinski, Randall Trapp, Dave Pomeroy, Mituhiro Hukunaga, David Wurl, Rick Shaftan, Ted Liszewski and James Roggentine. Thank you all for being here. And thanks to everybody who subscribed to the WTFDA email list. Currently (Dec 12th) we have 80 folks on the list, about 70 of them WTFDA

members. I think most everyone is finding this list an invaluable aid to their enjoyment of the hobby, besides being lots of fun. I would encourage anyone with a computer who has not yet done so to consider subscribing. I only have two pages here to do what I do, and we have only so many pages in the VUD. But on the WTFDA list we can really go deep into things and explore topics in a much greater detail. You will be surprised at what you see there. Also, we are now into year three of IRC Chat! Who would have believed it! If you haven't been on IRC for a while, why not drop in for a little while and say hi. The usual gang of die-hard chatters is almost always there, and we'd like to see everyone old and new drop in for a while.

ANYBODY NEED A DISH? This came in from Rich Wertman posted on the WTFDA list regarding parabolic orders from WTFDA members: "In a previous letter, I mentioned that if I can get an order for 100 pieces (100 antennas -mb) Antennacraft will make them. I estimate the cost to run from \$100-\$115 plus UPS shipping. I suggest those of you who don't want to be stuck with a corner reflector or a bowtie the rest of your lives consider ordering one, or maybe two, just in case the first one blows down. So far response has been low...only a few responded." Rich also goes on to mention that Antennacraft will only do this if the order is for one size antenna and one size only. So, Rich cannot order a mixture of 5 foot and 7 foot dishes. However, if you need a 5 foot dish please email Rich at Rwantenna@aol.com and he will try to help you find one.

GREAT LOOKING VUD! From Bruce Elving: "Just a note to commend on an excellent VHF-UHF Digest! I could not put the issue down, and spent about an hour and a half with it at that sitting. I was glad to see Tom Yingling's QSL column back after over a year-even if I was the only reporter!

Bill Hepburn's article on tropo DX that was reprinted off the web was excellent. I spent most of the day Nov. 11 enjoying WIAA *88.7 Interlochen MI, here at my location west of Duluth MN. I kept pondering if it was tropo scatter, enhanced tropo or tropospheric ducting. It was always in, but signal varied from excellent stereo to almost nothing. Nothing else was heard at that distance. If I pay more attention to 88.7 I may find this to be a "regular" at 560 km.

Bill Draeb failed to note on p. 15 that WAUN 92.7 Kewaunee IL finally embraced stereo! This was one of the area's long monophonic holdouts. I had to call engineer Lyre R. Evans of Green Bay to confirm its stereo status. (Bruce's comments continue on the next page).

IRC CHAT...Tues/Fri nights @10pm EST on IRCnet, channel #wtfdxa. Be there!
Topica.com, named one of 100 best websites by PC Magazine.
WTFDA@topica.com...it's DX, friends, discussion and fun! Subscribe today!

I think the filter article by Bruce Carter was a high point of the issue. I have been told, however, that the grounds are the two outer leads of the filter, and it makes no difference how they are set in the socket. And I take issue with the statement that DXers are only interested in the FM signal component only through the stereo range, not the 57 through 99 kHz SCS range. Not true! There are several of us who regularly DX subcarriers! I have found the use of 110 kHz filters does not rule out SCS. But I usually use "wide" mode in my tuner for SCS listening. Filters can be changed from the top of the radio circuit board, as is necessary when replacing the single filter in the G-E Superadio. I have never been able to lift that board and unsolder/solder from the under side. One has to cut the old filter near the top of the legs, saving enough of the three legs to solder a new filter in place. But I am glad to have a handy reference to the Toko filters' numbers.

88.75, or BELIEVE IT OR NOT! Here is one of the most bizarre DX tales ever told. And the most amazing thing about it is that it's TRUE! If you are on the WTFDA list you already know about this, but if you are not, you are in for a treat. This is the story of one Mark Hattam. Mark lives in London and is a systems manager for BBC News. He is also an FM Dxer.

Mark tends to FM DX down at the bottom of the FM band due to the terrible congestion on the rest of the FM band in London. 87.9 is a good DXable skip frequency in London and Mark had his tuner set there all summer looking for skip (yes, there ARE stations on 87.9 in Europe...and high power ones at that!) Well, on Monday, Nov 29th, 1999 at 11:15am local time in London, Mark heard something while parked on 87.7. It was a meteor burst, and he got it on tape. He put it up on the web and I (and a lot of other people) listened to it. It said, "...we are feeling right now at 5:36. You're looking at a live picture...our guest...from our channel 4 studios..." That's what I heard. And Mark sent out an SOS to myself, among others, and I posted this on the WTFDA list, and he posted it on various reflectors and newsgroups.

What was it that Mark heard at 11:15am London time? Well, Mark heard U.S. channel six audio! What he heard was one meteor burst, with, for a short time, another burst (...our guest...) overriding it. And believe it or not, the two words, our guest, have been positively IDed by WECT-6's chief engineer in Wilmington, NC as their evening news anchor who also does their morning show.

Now what about the rest of his reception? A person in Los Angeles came up with the answer. The audio, as I heard it, does not say "channel 4 studios", but "channel 4 seismo-cam". The man's voice is Kent Schocknek of KNBC-4 in Los Angeles. What we heard was a probable videotape of an earthquake occurring in Los Angeles. This may have been part of a local NBC outlet's early morning news, or possibly part of a documentary on earthquakes on some PBS station. At this time nobody knows.

So how did that signal make it all the way to England? It's anybody's guess, but Mark speculates. "There is a big high pressure over the SE USA, and it was 6:15am, i.e. in the pre-dawn period. I'd have to assume there was an inversion or duct over the sea which carried the signal a fair way across the Atlantic. When that ran out, the signal became line of sight to the horizon and perhaps just needed one meteor ping to get it here, though two is also possible. There were a fair number of "pinging" meteors all that day."

Mark's incredible reception has resulted in two major discoveries. The first discovery is to our European FM DX friends.. They have just discovered that our channel 6 audio is possible by multi-hop Es to Europe. They have never really given this much thought before. The second discovery is to DXers in the eastern USA. That discovery is that 87.9 is a very probable frequency for multiple hop Es from Europe! This frequency is completely empty in the United States, and is the home to many high power FM stations on the continent (50kw and over). Spain, France Portugal and Germany are all possible with multi-hop Es!

DXers in the WTFDA, working with FM DXers in the British TV-FM Circle, now are seriously looking for and awaiting the time when Es signals from one continent are received on the other. It may not be as difficult as once thought. And it has just been done by MS.

LAST BUT NOT...Lots of F2 in the air. Los Angeles to New England has been common. We have more about that in another report in the VUD. WNEW-102.7 began IBOC testing in early November. Karl Zuk described the sound of the datastream on the adjacent frequencies of 102.5 and 102.9 as a "Bee Attack". Karl also said "it sounds like hat SCA injection would be if it were heavily compressed at 80%. Another nail in the DX coffin." Joe Fela also commented "...Sunday morning around 0100 with the DX coming in, it was very obvious and annoying both above and below 102.7" and noted that using a MR-78 in narrow mode did not even help the situation. Recently WNEW has discontinued IBOC testing. TEP (Trans Equatorial Propagation) has been reported from South Africa into Europe, and also by Dxers in Brazil and Argentina into the Caribbean region. Some TEP audio clips are available for listening on the 4 eb. The audio levels are amazing for 5,000 mile skip. That's it, be good and WRITE! -Mike

F2 HITS THE U.S.A.

It has been a long time coming, but F2 skip has finally appeared on the scanners of WTFDA members on both coasts. The Thanksgiving holiday gave most of us a four day weekend, and luckily the F2 layer co-operated giving us skip for all four days. Bill Hepburn wrote that this was the strongest F2 he had heard in years. Randy Miltier also picked up some east coast stations on 30mhz via F2.

November 25, Thanksgiving Day, was a great day for F2 on the east coast. F2 began around 12:30pm here in CT and stayed in until 1830 with six hours of the California Highway Patrol. CHIPs were heard on the following frequencies:

42.6200 mentioning Fremont, Oakland

42.4400 mentioning Culver City, West Los Angeles and possibly another transmitter Breaking in from northern Calif (mentioning Delano and San Francisco)

42.1200 One station IDing as Bishop, another with much LA/OC addresses.

42.4200

42.4000 Two stations, one Mt. Shasta, another Ventura, mentioning Simi Valley.

42,4600

42,5200 station IDing as LA info, LA dispatch.

42.5400 mentioning Monterrey, Hollister

42.6000 station IDing as Golden Gate.

42.3400

42.0200 briefly at 1700. No idea who.

More F2 on Nov 26th. French 2-way stations on 35.1500, 35.3600, 35.2000, 35.2650. This was in at 1100 tune-in and out soon thereafter. Nevada police heard on 42.8800 with NV Highway routes and Las Vegas addresses. This opening quit at 4:45pm, earlier than on the 25th.

Saturday the 27th brought more F2 beginning around 10am tune-in. 33mhz was full of Spanish on 33.4250, 33.3750 and 33.3750, and Southern USA on 33.6000 and 33.3750. Some Calif F2 was heard, but less than the previous two days.

The 28th brought more F2, with Spanish on 33.4750 and 35.3400 and December 3th had much Spanish. 42.1200 had Spanish instead of the Calif police. NV was in on 42.8800 but Spanish was heard on 42.8200 and 42.4200 around 2pm EST.

On Dec 4 Fred Nordquist posted on the WTFDA list about 2 stations QRMing each other on 30.4500. One turned out to be a second harmonic of BBC shortwave audio. The other IDed as Cleared Creek Munition Control, most likely Ft. Hood TX via F2. Jeff Kadet posted about the 48.2504 video buzz from Equatorial Guinea being widely heard in the Southern U.S.

Some Los Angeles area F2 was heard again on Dec 7th around 4pm, and on the 8th Spanish was noted here in CT on 42.140, El Centro was heard on 42.920, Bakersfield on 42.600, and two stations QRMing each other on 42.880 were NV police and CA Highway Patrol. 42.940 was noted with heavy traffic, noted on a frequency list as being a link from CA to NV highway patrol units. Bill Nollman noted Ft. Hood TX on 30.400 earlier in the day on the 8th.

December 8th brought San Diego HP on 42.920. The 11th brought in a pager on 33.340 calling itself Meridian Mail. Also around 1400 Jeff Kadet posted an F2 alert, noting that hams on the East Coast and West Coasts were talking to each other on 50mhz. He asked that ch2 be monitored for F2 skip, but nothing unusual was noted here. -MB

1999 FM E-Skip Summary

"ending the millenium on a positive note"

THE TOP 10 SKIP DAYS OF 1999:

The final skip season of the millenium was not a bang, but nor was it a whimper. Compared to the strong skip seasons during the late 1980's and early 1990's, it wasn't that great, but on the other hand it was certainly the best season since 1995. What made the season was a strong showing right during the middle. April and May, and late July & August, were a disappointment. However, the period from June 26 – July 7 provided some outstanding openings, especially July 6th and June 26th, both of which will rank among the top openings of all time. DXers in many areas had high MUFs those openings for an extended period of time. The top three openings, and five of the top ten, came from that period. In fact, if you extend the range back a week to June 17 – July 7, nine of the top ten openings fall within that period. So on July 7, 1999, the season was looking to be a great one. Unfortunately, the bottom dropped out after that, making the year close out as "slightly above average", but better than recent years.

Special Report: 1999 TV Es summary

This year, "pests" were calculated by how many different DXers logged the station in question at least once. The idea was to show how common certain stations are around the country, rather than which stations are most often seen by more active (or luckier!) DXers.

1999 had the fewest Es days reported of any year since I began keeping statistics; the total number of loggings was also down from 1998, though not as bad as 1997 or 1993.

On the other hand, I think the Es we did have was of higher quality. Bob Seybold reported skip to channel 13 on July 5th. Russ Miller and Roy Barstow both reported trans-Atlantic skip (on three different channels, to four different countries) on four days. Mike Cherry reported trans-Pacific skip to eastern Russia on July 9. Mike also logged Alaska on three days. And Frank Merrill logged a 230-watt translator on channel 6.

Here's hoping for a happy, skip-filled holiday season for everybody!

MILLENIUM CRYSTAL BAII

(Based on vibes, gut feelings, intuition, and a little common sense, it seems appropriate to venture boldly (and probably foolheartedly) into the hazy world of predictions. For what it's worth, here's what I think might happen as broadcasting transitions into the new century.)

By: Tom Bryant

10

Assuming that you are reading this, my first prediction has already come to pass. That is (was) that the Y2K bug turned out to have a lot less impact than the hype promised; and that while there were a few minor glitches, no serious problems resulted.

HDTV will be handed a major setback in the first half of this year. Amid fears of serious problems anticipated with the approved system, the FCC will put a 'freeze' on all HDTV development until further field testing is undertaken. With opposition to the current system from a large number of broadcasters AND the Pentagon, there is bound to be some sort of action. My prediction is that testing will determine that the European system is superior to our (U.S.) initial choice. This will mean that stations which have invested in digital transmitters will either have to modify them (if possible) or start from scratch. In the long run, this setback will

further delay widespread implementation of HDTV; possibly by as much as five years.

Other HDTV thoughts include the possibility that because of the extremely high cost of receivers; and what appears to be vast viewer indifference toward the new technology, the elimination of analog transmissions could easily be as much as 15 to 20 years down the line.

Expect a war between broadcasters and the FCC when the time comes to relinquish analog channels. I'm not a lawyer, but it seems that there are enough loopholes in the terms of this ruling that there is cause for station owners to feel that BOTH of the allocations could possibly remain theirs to use. If that premise gets torpedoed, the next battleground will be a move to swap the digital service back to the "old" channel when it's time to shut down analog transmissions. From what I'm seeing, a lot of stations seem to think this is an option.

A final television prediction. When the curtain drops on analog there will be a lot less stations on the air than at present. My reading is that LPTV will all but disappear, and many small market (full power) operations will shut down. The bottom line simply will not allow HDTV conversion for outlets that are barely paying for themselves at present.

FM (and AM as well) may fare a bit better than television in the switch to digital transmission, mainly because the enormous push that was behind the premature television entry does not seem to be evident where the audio services are concerned. The big reason for waiting in this area is to see if IBOC (In-Band On-Channel) transmission is practical. Considering the already crowded (in some cases overcrowded) status of the FM band, IBOC would solve what station owners and operators perceive as a multitude of problems.

Most broadcasters don't want to change channels or frequencies. They're afraid, among other things, of losing their identity. Also, they are not thrilled about the expense of any more transmission equipment than absolutely essential.

While it was extremely difficult to shoehorn in enough additional television channels to provide an HDTV frequency for every existing full power operation, the task WAS accomplished. There will likely be interference problems as a result; but it is workable. A similar process for either FM or AM is almost unthinkable. Considering

the close proximity of existing transmitters (particularly FM) there are few if any localities where "drop-in" channels could be created.

Where does that lead radio if IBOC doesn't pan out? Look to Canada for the answer.

With the move already beginning, Canada is years ahead of the United States when it comes to broadcasting catching up with technology.

Hold that thought while you consider the following.

Think about it for a moment. Radio transmission is virtually unchanged from its' earliest form. Yes, we've done some tweaking and refining since KDKA came on in 1922...or the early FM experiments of the 30s and 40s...but essentially nothing has changed.

The advent of digital technology has already pervaded the recording industry, is making inroads in video production and recording, and is up and running on satellite feeds and some cable companies. Over the air transmission is the last remaining analog step in what can otherwise be an all digital chain.

Now, back to Canada and their approach. Rather than waiting for IBOC to be validated, the governing body set forth a long range plan that will eventually move most if not all audio transmissions to an entirely new chunk of spectrum. Their approach, when fully implemented, will generally put all stations on common ground. There will be no such thing as clear channels, or high power giants.

Without going into a lot of detail, the coverage area for each station is very small compared to what we're used to in the analog world; however with additional transmitters at strategic locations, the system works much like the cell phone network. Thus, as long as you are in range of a tower you have a rock solid signal... which is passed from tower to tower until you reach the end of the coverage area.

The downside of this is coverage in isolated rural areas. I suppose this has been discussed and considered; and I would venture a guess that the opinion was that service is already horrible in the boonies; and that total elimination really wouldn't make much difference.

How something along the lines of the Canadian plan would work for the U.S. is a matter of opinion. Personally it strikes me as making way too much sense to be accepted here. I don't know how the Canadian regulators overrode opposition by the high-rollers in Canadian radio ownership, but obviously they did. Could it happen here? I suppose, but not without one monster of a political bloodletting.

The likelihood of full power facilities allowing their flea-powered competitors to be elevated to their technical stature is absurd. Not without a fight; and a prolonged run through the court system.

The big guys LIKE being big. Because they are big most of them have enormous financial war chests to fight off encroachment. I suspect every major operator in the country is prepared to dole out huge chunks of cash to the best lawmakers money can buy!

What about DXing all this new digital stuff once it gets here; assuming that it will eventually arrive? Jeff Kadet has already proven that HDTV is DX-able. Based on his UHF findings, the same will hold true for the handful of HDTV stations licensed to channels 2-13. Ditto for FM. AM may be a bit weirder. It's all definitely going to be different. Will it be as challenging, as much fun? I suspect a lot of us will answer no. Perhaps that's because as old timers we are stuck in the era of vacuum tubes and circular test patterns. The younger crowd might not give much thought to the changes...in fact they'll probably enjoy pioneering these new frontiers.

Now...the kicker! My final prediction for the millenium. It causes everything that I've written here to become instantly irrelevant.

While it's not likely that many of us will be around to see it happen, I predict that before the turn of the next century there will be NO terrestrial delivery of signals for the purpose of mass entertainment. It will all (including local insertions) be accomplished either by satellite delivery...or a new method of global transmission yet to be developed.

If you think that idea is far fetched, imagine how totally insane an accurate prediction of today's technology would have seemed in 1922.

GEORGE W JENSEN 4604 ANNTANA AVE BALTIMORE MD 21206-4220

I hope everyone's holiday was peaceful, pleasant and joyous. Another short column this month - but changes are coming. First - there are several new birds recently or soon to be placed in orbit -

Satcom C1 - to be replaced by GE 7 AT LAST

Galaxy 10 - location to be announced

possibly - Galaxy 9 and SBS 5 - as there is no C/Ku combo at this location of 123 W.

Spacement 4 will be replaced by GF Americom 4 - C and Ku - this is an aging bird whose Ku capabilities are very limited and will be expanded by the new GE 4.

Galaxy 6 will be replaced by Galaxy 11 - which will give this slot a C and Ku replacement - G6 - has no Ku band.

I now have MPEG2 capabilities with an additional PANSAT 1000 receiver. When I figure out how it works as a slave to the 4DTV - 100's of new channels should be opened up for DX or viewing enjoyment.

Now to the changes - brief though they are.

First - almost all FOX Sports channels are now no longer analog. Don't know where they are. - will keep you informed. Anik E2 - Ku-band is undergoing a major programming download shift. When this stabilized - I will inform you of programming locations. Jeff Kitsko has been of great help in informing me of these changes. OF PARTICULAR NOTE -

Tele St. Pierre and Micquelon is now downlinked on 4DTV channel 321 in NTSC. I am sure that there are ammy DX'ers on the East Coast that would love to have DXed this one on terrestrial DX - but it was in SECAM format with French channelling and less than 1KW ERP.

That's all for this time - see you in 30 - Y2K notwithstanding.

Programming changes

08	8	T
<u>Call</u>	Location	Programming
WBMM [22]	Tuskegee, AL	new station sold to Pax.
WPAN [53]	Ft. Walton Beach, FL	adds VCC and ACN shopping overnight.
KASY [50]	Albuquerque, NM	drops UPN (which moves to KTEL-LP [53]).
KBGD [18]	Farwell, TX	new station sold to Prime Time Christian; to be religious.

Forum & Other Stuff

Thanks to John Broomall, Chip Kelley, and Jeff Kadet for information appearing elsewhere in this

John writes that WFNA-LP [32] will <u>not</u> be A1. W26BT should be on the air by the time you read this, with HSN, replacing long-dark W56CD. W20AU is moving to channel 4. (Presumably, its programming is taking over W04DB. They will technically be two different licenses.)

Jeff forwarded an item that could confuse the DXer... Under the new TV duopoly rules, NBC affiliate WTLV [12] Jacksonville, FL is buying the ABC affiliate there, WJXX [25]. WTLV newscasts will air on both stations. (And note that WJXX has a satellite, WBSG [21], which will also presumably carry the WTLV programs)

And I thought 250 DTV applications last month was a lot... I estimate over 700 in this month's *VUD*. As of 1997, there were roughly 1,500 TV stations in the USA, so that leaves about 500 DTV applications left to appear, assuming everybody applies. This is likely to continue for a month or so, and then the FCC will start acting on the applications which will eat even more space...

As the F2 season heats up, I would like to suggest people take advantage of F2 DX now. Unlike the U.S., European countries do <u>not</u> appear to be planning on using VHF for DTV. Indeed, some low-band VHF transmitters are already off the air - notably in Ireland and Spain. It does appear the high-powered transmitters in Germany will survive this sunspot peak, but probably not the next one. VHF transmitters in Eastern Europe and Russia will be around longer, but unfortunately that's a pretty difficult F2 path from North America.

Speaking of trans-Atlantic DX, DXer Mark Hattam in the U.K. seems to have logged an American TV station by meteor-scatter! If you have audio capability in your computer, take a look at http://www.dxradio.demon.co.uk/unid.html. (and if you know what station is in this recording, please let Mark know!) A couple of people have indicated they believe this is a recording of KNBC [4] coverage of an earthquake a few years ago, so it would appear likely this was an NBC affiliate carrying archival footage. Maybe someone can figure out which NBC affiliate?

73 Doug

PIRATE WATCH:

. HARTFORD, CT. The FCC recently shut down "Radio Avivamiento", a Spanish language religious pirate on 97.1. The operator, Reverend Samuel Girona, has asked a federal judge to intervene on his behalf, citing freedom of speech and religion. It's up to U.S. District Judge Alvin Thompson. And in other pirate news from Connecticut, Mike Bugaj writes on November 29th to let us know that "Prayze 105.3" has returned to the air. They had been shut down over a year ago (11/24/98). According to a news report on WVIT-TV30, the station won a court battle regarding their right to stay on the air, and thus decided to return to the air. The U.S. Attorney does not agree with the ruling, however, and threatens to hold all personnel at the station in contempt. The station has spent over \$150,000 in legal fees to stay on the air. The transmitter is located on an office building in Bloomfield, a mile or so north of the Hartford city limits, and gets out well for about ten miles.

 LANCASTER, PA. On a drive through the area. Doug Smith noted the 106.3 Spanishlanguage pirate here off the air.

• PITTSBURGH. PA. The FCC. with cooperation from the FBI, closed down Mark Lange's "Radio Carson", which operated on

• RICHMOND, PA. The FCC shuts down an unlicensed station on 91.7 here, again. The station is operated by Khalid Kubweza (formerly known as Anthony Marshall). The Enforcement Bureau got a four-count federal indictment against him, since "previous actions have failed

FM NEWS PAGE 9

to deter the operation of an unauthorized FM station from the Kubweza residence". He has had equipment seized as far back as September

Lots of action at the CRTC this month. Look above for all of the action on new stations in Toronto (and this does not include a lot of applications for 740 kHz not listed here). The date for reviewing all of these items has been set as January 31, 2000. In addition, there has been action on the digital front- check out Toronto and Winsdor above as well.

JANUARY 2000 The wealth of Central and South American information this month comes from Alexei Marrero Cruz, of Holguin, CUBA. Alexei was very kind to send us this information both about FM stations on his island, and also DX catches via Tropo and E-skip to the south. This information is extremely valuable due to the lack of other reliable sources for this area. His address is: Alexei Marrero Cruz - c/Máximo Gómez #47 - San Andrés, Holquin 84200 CUBA. Thanks for your contribution! These listings also made me to realize that my "Clip Art CD" does not contain the flag for every nation, like I thought it did, so that is why you don't see flags by each country!

Another small column this month, with only Saul Chernos checking in this time, with some skip and trop from last millenium, ha! Seriously, though, Saul got in on some of the impressive ES during early July, and some nice late-summer and early-autumn Tropo openings. If you've had some DX, let's hear from you next time! Hope you have a Happy Millenium!!

Yes, a new local....and a nasty pest. They're unnullable, and cause considerable trouble for 97.3, one of my most productive channels. Which would be OK if they had a worthwhile format, but that's a bit much to expect these days. E-skip noted on November 6 and 17, but only into TV. and no IDs.

Your resource for FM DXing

An extremely poor winter Es season. The new semi-local on 92.5 is going to be devastating for DXing on that channel. It used to be one of my

primary ones for meteor scatter. The RDS feature has proven useful in catching a few tropo IDs, but far too few US stations utilize it. 73, Pat - WA5IYX January 2000

JANUARY 2000

Vaughan

From the editor

Well, here we are, a new millenium and a great new year to add lots of new stations to your logbook! Hope you all had Es over the holidays. And be sure to keep checking for F2 during the sunspot maximum.

Be sure to check out the newly-revised FM DX Web at http://members.aol.com/fmdxweb, You'll see even more changes as we roll through the next year, so check back often. Also, see the new, better than ever edition of the WTFDA website. Tim McVey has some great ideas for the site, so go there often.

See v'ail next month!

January 2000

This report is for November 1999. There has been further gradual Autumn cooling, but still some stable periods with layer ducting along the southern California coast, allowing occasional 200 mi (395km) tropo DX to San Diego/Tijuana received with only an indoor whip and bowtie antenna.

Nov 1 Nov 2-4am Fair+ (some stns occ. good) Nov 4 eve Poor (approaching cold wx front) Nov 5-6 Very poor None (rain, Nov 7 night) Nov 7-9 Very poor (sunny & mild) Nov 10 Poor, improving Nov 11 Fair Nov 12 Nov 12 eve-Nov 14 aft: Out of town, in Wasco Nov 14 eve Fair, deteriorating (appr cold wx front) Nov 15 Very poor Nov 16-22 None Nov 23 Very poor (cool but calm, stable) Nov 24 am Poor Nov 24am-Nov 27 aft: Out of town, in Wasco Nov 27 eve Poor Nov 28-29 Fair Nov 30 Poor, eve down to very poor (Cold wx front, dispersing layers)

The Nov 2-4 am fair-good signals included ch 3 CCI under local KEYT-3 S.B. (15 mi) from XHTJB-3 Tijuana (200 mi).

In Wasco, on Nov 12-14, some winter "Tulefog" tropo was evident (though not optimum) with good signals from such as KXTV-10 & KOVR-13 Sacramento/Stockton (215 mi) and KUVS-19 Modesto (175 mi), best seen in some years as I haven't gotten to Wasco much in winter. Wasco tropo Nov 24-27 was almost non-existent with only poor signals as far as K56DZ Fresno (100 mi) and KNSO-51 Merced (150 mi), on 4-bay UHF & 1-bay VHF conicals at 16 & 10 feet AG.

Best of DX to all.

Dennis
