The Worldwide TV-FM DX Association

Serving the VHF-UHF Enthusiast

VHF-UHF DIGEST

E-ZINE VERSION

AUGUST 2002

The VHF-UHF Digest is the official publication of the Worldwide TV-FM DX Association dedicated to the observation and study of the propagation of long distance television and FM broadcasting signals at VHF and UHF. The WTFDA is governed by a board of directors: TOM BRYANT, GREG CONIGLIO, BRUCE HALL, DAVE JANOWIAK AND MIKE BUGAJ.

MEMBERSHIP ENDING IN AUGUST 2002

Check this list. This is your last issue unless you re-up.

Howard Fountain	Roosevelt Crawford
George Greene	Dennis Smith
Bob Smolarek	Steve Sprachman
John Tudenham	Ron Wing
Melvin Dishong	Scott Fybush
Steve French	Glenn Hauser
Eugene Hinton	James Roseman
Jeff Lehmann	Mike Friedel

WTFDA membership stands at 276 as of 7/22/02.

If you have a computer, hang out at the place where many of your fellow Dxers reside. That place is the WTFDA list at Topica.com. Want to

know when tropo is up? You'll find out. The Topica list takes out the guesswork. Subscribe now by sending an email to WTFDA-subscribe@

topica.com. Your logbook will love you for it! Have a great tropo season!

Well, we should be deep into skip season right about now, but for the most part the Es has left us behind. We've still been able to dig up some DX for you all and you can read it in the twelve pages that comprise Northern FM DX.

It's also very possible that we'll have FM News back with us again next month.

To make our VUD complete we have two articles on digital television. One concerns the cost of switching over to digital and how some small stations can't afford it. The other concerns interference between NTSC and digital TV signals. Good reading!

The 2002 WTFDA TV Station Guide GREAT FOR IDING TROPO CATCHES!

You just can't get any better than this! Over 400 pages of listings by channels and by plots on channel maps...full power, LPTVs, translators and DTV stations. The WTFDA Station Guide has it all! Make your check or money order for \$23.00 (US funds for those outside the USA) payable to **Dave Janowiak** and mail it to:

John Ebeling 9209 Vincent Avenue South Bloomington, MN 55431-2157

Order now! Supplies are limited! Don't be left out!

For even more info see us online at: http://fmdx.usclargo.com/tvg.html

SUMMER 2002 - THE ES SEASON THAT WASN'T?

Well, it looked promising. It started slow and we had two really great FM openings in the middle of June. And then it just quit, leaving us all shaking our heads and wondering why it left. The remaining openings hung around channel 2 or perhaps channel 4. One or two went into FM for a few minutes and then dropped out of sight and by the Fourth of July it was about over.

The east coast fared better than the west coast. Phoenix had a great year in 2001 but it had an almost total lack of E skip this year. Ashland OR had no Es since the beginning of June.

I think most of us are still in a state of shock. In my opinion, the only worse year for summer skip was 1984. I'll never forget 1984 for the lack of skip openings and I'll never forget this summer either.

MEMBERS AND MORE

Let's get started as usual with new members to the club. Welcome to **Rick Lucas** in Rochester, NY and **Mark Clark** in Phoenixville, PA. Once again Rochester comes through with another WTFDAer. I think we must have five or six there right now. Mark Clark writes "Your website was very impressive and I found your technical articles very informative. Thanks so much for covering this interesting part of the radio/tv hobby." Thanks Mark. I hope when things slow down this winter we can get more old VUD reprints up on the website again.

Turning to the renewal side, thanks go to these folks for writing a check for another year in the WTFDA: John Griffiths(ON), Keith McGinnis(MA), Rick Lewis(AZ), Frank Aden(ID), Greg Coniglio(NY), Alan Michalek(MA), Jacob Norlund(MN), Kermit D. Reid(GA), Benjamin Greenlaw(ME), Ralph Strobel(IN), Ken Bedley(ON), Steven Ponder(TX), Tim Cronin(IL), John Marx(WI), Mike Femyer(AZ), Bob Timmerman(IN), Paul Mount(NJ), John Johnson(MT), Stan Weisbeck(WA), William McGuire(MD), David Austin(SC), Pete Giacopelli(NY), Niel Wolfish(ON), Guy Falsetti(NY) and George Mileon(MA). Thank you all for staying with us despite the lack of E skip!

NEED A ROTOR?

Let's face it. It's just not easy to find an affordable rotor anymore. When your rotor dies, what can you do? Well you can run to Radio Shack and buy one of theirs and hope that it will last a few months. Or better yet, you can go email/call/write Rich Wertman. Rich has four Channel Master 9515B remote controlled HD rotors with 99 memories. The price for the 9515B is \$149.95 plus UPS shipping. If all you need is a 9515 drive motor (w/hardware),Rich has two of them and it's \$99.95 plus UPS charges. These take three wire conductors. Email Rich at rwsvcinc@localnet.com. Or write him at 6150 Crosby Rd., Lockport, NY 14094 or give him a call at 716-434-9216.

We hope everyone had a great time in Oklahoma City at the WTFDA Convention. I know John Zondlo put a great deal of work into it. In the next VUD we should have a convention wrap-up for you and maybe pictures too. We'll see how they come out. Stay tuned.

FMEDIA

As long as we're here talking about services that our members provide, let's not forget **Bruce Elving**. Bruce is the publisher of the FM Atlas, a book that is considered a "must" by many FM Dxers. As a companion to the FM Atlas, Bruce also publishes a monthly newsletter called Fmedia! which lists new FM stations coming on the air, facilities changes, call letters changes, news of translators, SCA, "Selected AM Happenings," "nonIDs/multi city IDs," and formats, noting which stations are stereo and which suffer from the disease of being monophonic. Fmedia usually runs about 8 pages filled with information. There is also is a FM Forum.

If you're a person who just absolutely HAS to be in the know, Fmedia could be for you. The subscribing rate for FMedia! is \$26/year for DXers, and \$75/year for broadcasters and others gainfully employed in the media. Contact Bruce Elving for more information. His email address is fmatlas@aol.com.

GROWING UP IN PASCAGOULA

From **Peter Baskind**, "When I was a kid growing up in Pascagoula, MS -- one of the best DX locations in America, as I could see the Gulf outside my bedroom window -- our cable system was given fits by trop, and even an occasional E-skip opening.

The biggest issues came up on the system's attempts to pipe in New Orleans signals. New Orleans is about 100 miles out, so a high-gain antenna was obviously needed. When WYES-12 went off (they are 24 hours now, of course. I watched them late into the night studying for exams at Tulane Law School), one would often see snow-free signals from KBMT/Beaumont. Occasionally, Beaumont would not be seen, but you would get KSAT/San Antonio (about 600 miles out), although its bearing is not too far off Beaumont's.

Likewise, the antenna pointed at WGNO-26 would often bring in KRIV/Houston, and occasionally then-WEVU Naples, FL* (although the antenna was pointing the wrong way). Over the Gulf, the Naples signal at 500 miles could get so strong, it would override New Orleans.

Just as an aside, channel 26 from Naples was my first DX catch ever. I was attempting to watch New Orleans on a hand-help bow-tie, and couldn't figure out why I was getting ABC. Sure was strong. You know...I really miss Gulf Trop."

HDTV IN NEW YORK

From **Karl Zuk**, "The only HDTV presence noted here are Fox on 44 and CBS on 56. The PBS 61 outlet barely makes it to my office about 25 blocks from the transmitter site. LOL. I recently saw a demo of a DirecTV feed of HDNet in a store. When motion artifacts are apparent in high definition, noise reduction becomes a very necessary ingredient. Nothing like very distinct blurry pixels. Boy, this technology still has a long, long way to go. You simply need much more bandwidth or a very clever algorithm (or both) to make this fly right. I also found it ridiculous that HDNet fills large holes in their schedule with film to HD transfers of old TV shows like Hogan's Heroes. I really like NTSC more and more. It works and is relatively simple."

The head of Sony Broadcast America, Ed Grebow, is said to be leaving Sony to head the broadcaster's consortium promoting the discovery of a new site for a master antenna for the NYC area. Why someone in this important position would want to take on such a challenging and potentially thankless job is a mystery to me. Ed has also worked for CBS and Chyron Corporation (the character generator people). The two sites now being proposed are Governor's Island and a site in (I think) Jersey City, NJ. It seems no one wants any part of the new tower structure. NYC mayor Bloomberg has nixed every concept so far.

And that's it for this month. See you all in September. Thanks for reading.-Mike

METEOR SHOWER GUIDE

We have a few showers peaking in August. The Alpha Capricornids Peak on Aug 1-2, the Southern lota Aquarids peak on the 6-7th, the Upsilon Pegasids peak on the 8-9th, the Gamma Leonids peak on the 25th and 26th and the Northern lota Aquarids peak on the 25th and 26th. Also bear in mind that four more minor showers peak from the 8th to the 18th (two of them on the 13th and 14th) besides the majors, so be prepared for some meteor bursts showing up on your receiver during the month of August

Puerto Rico:					
Aquadilla	20 W20CF	NS 5kw,			

Thanks to John Broomall, Rick Lucas, Dave Williams, and John Johnson for information in this month's column.

John Broomall works for WATC-57, a non-commercial religious station in Atlanta. A few months back, they added W42AO Athens (moving to channel 54) as a translator. Now, WATC has another one. WHDS-LP channel 32 in Savannah joins the group.

Also in the translator department, John Johnson reports new K09XJ on the air in Sheridan, Wyoming. (FCC DB says K09XK. Such discrepancies are not unusual.) It's a translator of John's employer KTVQ-2. (John celebrated his 30^{th} year with KTVQ in May. Most stations won't let anyone stay that long. Congrats!)

Temporarily, there was <u>another</u> KTVQ translator in Sheridan. New station KBNM-7 is on the air but the studio is not yet complete. KBNM has been simulcasting KTVQ, possibly with inserted character-generator IDs. (I suppose with the rare tropo in that area it's unlikely any DXer is going to see it...) Once the studios are complete KBNM plans to be a NBC affiliate.

Rick Lucas confirms that W59BV Rochester has moved to channel 42. I'm sure it has new call letters but we probably won't know what they are until next month.

K48BL is a locally-programmed LPTV in the Bend, Oregon area. Dave Williams reports it temporarily moved to channel 42 (without bothering to change the IDs), then moved back to 48. Oregon Public Broadcasting took over channel 42, which is now carrying KOPB-10 Portland. Best I can tell from the FCC records, channels 42 and 48 are still co-owned. My first guess is that the commercial owners are leasing the translator to OPB; second guess is that the translator has been sold to OPB but the sale hasn't yet reached the FCC database.

The new channel 44 station in Toronto had already been authorized from a non-technical standpoint. But another applicant was deemed more deserving of the channel 52 assignment. The grant to CFMT was contingent upon finding another channel that would be technically acceptable. Early word was that channel 69 would be used. (As the nearest other channel 69 station, in London, also belongs to CFMT) They seem to have changed their minds.

The KMOL=>WOAI-TV call change in Texas is not yet official. http://www.100000watts.com reports that the change will happen by the end of the year. Clear Channel recently (re-)acquired the station; WOAI-AM is where Clear Channel got its start. The TV station had been sold separately from the radio in 1965.

Note new full-power analog stations authorized in Pittsburg, Kansas (channel 14); Boise, Idaho (channel 39); and Destin, Florida. (channel 48) Also, new full-power analog stations on the air in Flagstaff, Arizona (KTFL-4, FN, already DXed by skip by several DXers) and Tuskegee, Alabama. (WBMM-22, Pax) KREX-5 Grand Junction, Colorado has had a substantial power increase - and more importantly, tower-height increase. It ceases to be one of the tougher skip catches, and will probably be widely seen next summer if we have a skip season. (<ouch>) East Coast DXers will probably notice WBPH-60 Bethlehem, PA has also increased power quite a bit.

In the DTV department, stations keep popping up. Note this month a new DTV-only station authorized in Crookston, Minnesota on channel 16. This one belongs to Prairie Public TV out of North Dakota. Shenandoah Valley Educational TV in western Virginia has applied for on-channel boosters for two of their DTV stations. On channel 11, a booster at Charlottesville will relay their WVPT-DT Staunton. Channel 21 boosters at Fulks Run and Luray will relay their WVPY-DT Front Royal.

I'm not sure why WDTL-44 was reported last month as applying for a license to cover. This month, the FCC says the permit has been cancelled and the callsign deleted. This confusion, too, has happened before...

Not much of a skip season this year. Some interesting tropo reported though. Hopefully the tropo season will make up for what we missed this summer... Good DX!

WESTERN TV DX

VICTOR FRANK 12450 SKYLINE BLVD. WOODSIDE, CA 94062-4554 frank@horizon.sri.com

Dennis Park Smith, 3605 San Remo Drive, Santa Barbara, CA 93105-2523 (805)687-7803

This report is for June 2002. At Santa Barbara, tropo DX along the southern California coast, to San Diego/Tijuana on TV-FM (250-mi/320km) existed practically the entire month. The air boundary existed the entire month, but was quite high elevation much of the time (the lower elevation the boundary is, the better the tropo for my low elevation). Temperatures were quite high inland, which also means the air layer above the boundary along the cool moist coast was hot and dry which helps the tropo.

Jun 1: Poor Jun 2 – 3: None Jun 4: Fair Jun 5: Good Fair (Existing layer deepening; Jun 6: Jun 7: Poor i.e., boundary increasing Jun 8: Very poor elevation) Jun 9 – 12: None Jun 13 am: Poor Jun 13 eve: Good (Boundary down to lower Jun 14 am: Poor elev) Jun 14 eve: Good Jun 15 am: Fair Jun 15 eve - 17 am: Good+ Jun 17 eve – 18: Fair Jun 19: Poor Jun 20 – 21 am: None Jun 21 eve - 23 am: Poor Jun 24 am: Poor Jun 24 eve - 26: Fair Jun 27 – 31: Poor

Morris Sorensen, Winnipeg MB

Best of DX to all,

DXing with circa 1983 RCA b&w portable and Channel Master indoor antenna from circa late 1950's

Dennis

SMALL TV STATIONS REEL...Continued from page 40.

Stations bear digital risk

Underlying station owners' arguments is their feeling that they're taking most of the risks in the DTV transition.

For example, only a few cable operators have agreed to carry local stations' DTV programs. And TV makers still charge top prices for sets with DTV converters, dampening consumer interest.

"This is not really an orderly transition," Duhamel says.

"Smaller markets need a substantial amount of time, because there's no demand for DTV here. We're out there as the Lone Ranger. Cable isn't doing anything. Set manufacturers are sitting on their hands. Return on investment is so far out there that this thing is crazy from a financial viewpoint."

Despite their problems, small stations don't expect to get much more relief from the government.

Federal officials plan to get tough with DTV laggards. The FCC denied 71 of the 843 requests for sixmonth extensions from the May 1 deadline. Regulators also threatened, in sanctions proposed last month, to yank the licenses from stations that they see as stalling.

"For the most part, people are trying to get on with digital," Chessen says. Although there have been "some bumps in the road," progress has been "slow but steady, and we have to keep in perspective that it's a massive transition. These things don't happen overnight."

Still, the NAB wants to goose the process and shift some of the risk: The powerful lobby group is asking Congress to require cable operators to carry local stations' DTV broadcasts, as well as the current analog ones. It also wants to require TV manufacturers to include DTV tuners in all new sets.

Because stations must pay for DTV transmission even though there's no market for it yet, "we have no safety net," Fritts says. "We have to have this transition work. It's time for Congress to complete the circle. Without Congress acting, (small-market stations) have no hope. The FCC has been sensitive to the concerns of Congress and now we have to sensitize Congress to the concerns of small and rural markets."

Without dramatic change, station owners in the smaller markets will have little choice but to plead for even more time.

"We need to be flexible about the date when we go (from low power) to full power," Bongarten says. "It's really a question mark as to when the consumers and manufacturers will be in sync. If there isn't greater demand, then the FCC will have to take a closer look at what they're doing."

Eastern TV-DX

Matthew C. Sittel 15013 Eureux Circle Bellevue, NE 68123 mcsittel@cox.net

August, 2002

September, 2002 column deadline: Aug. 12

Eastern TV-DX is for reporters from the following states: AL, CT, DE, FL, GA, IN, KY, MA, MD, ME, MI, NC, NH, NJ, NY, OH, PA, RI, SC, TN, VA, VT and WV, plus Washington, DC. Also for reporters from the following Canadian provinces: NB, NF, NS, ON, PEI and PQ. Overseas reports are also welcome!

I have a number of reports this time, but I doubt that will happen next month. Skip has been non-existent as of late for just about everyone. June 14 was a superb opening; a number of you Easterners had a pipeline to my backyard stations here in metro Omaha! But where is the skip now? Who knows... we can only hope it makes an appearance soon. In the meantime, here are some recent reports of DX, back when there was some...

Very few openings and generally short-lived and barely exceeding channel 3, except for a few cases when the openings were among my best ever. Very little in between. 73s, Saul.

DC plug was hot by then... had to unplug for a while and sleep before night job. I don't think I've ever had so many Es IDs in that short of a timeframe ever! Even 3-4 deep at one time! No matter what anyone else says, it was an increDXble month for me. 7 via tropo, a whopping 14 by Es!! 73, Keith K. Smith.

Notes:

- 1. No full power KEMC relayers on 89.1, but two translators; the other is K206BA Red Lodge. That's further away and less powerful, and there's no way to tell it from K206BN, so I'm going to count this one. 222 watts.
- 2. Logged on car radio about 7 miles south of home.
- 3. Plenty of local announcements but none give any indication of where the station is! Neither does their website on www.joyfmonline.org. IDed by the "whois" information for the Internet

Northern FM DX Northern FM DX

NOTE 1 - Odd to log MS in this decidedly midwestern opening. Heard an ad for Mississippi Congressman George Irvin.

NOTE 2 - CIUT's transmitter problems have gone on for weeks, and have seen the station signal suffer seriously. It's barely audible at Burnt River ON, whereas normally it blocks weak tropo.

NOTE 3 KSYE 91.5 OK Frederick heard IDing as KCBI Ft Worth TX with Dallas-Forth Worth traffic. Confirmed with station engineer.

NOTE 4: I left the radio on 96.9, fell asleep for a couple hours, woke up at 0053 and saw the following on the RDS readout: KIAK--FM. This is the first DX logging I have ever made in my sleep.

NOTE 5: CBFZ and CBFX4 are fairly new to air, easily in the last half year to year.

A couple incredibly good skip openings. But "couple" is the operative word, here. May and June have been fairly productive for nice tropo catches in the under-500-mile category. I use a Sangean ATS909 portable with RDS readout, and a Toyota car radio, No tower or rotor but make up with moderately high ground. 73's - Saul

Editors note: I really thought I had heard it all in terms of places to dx but Saul's logs from the DUMP (June 7 and 25) really had me rolling on floor.

MATTHEW SITTEL, 15013 Eureux Circle, Bellevue, NE 68123 http://members.home.net/mcsittel/dx.htm mcsittel@home.com

Equipment: Yamaha TX-900 tuner w/modified filters, Winegard PR-5030 VHF/FM antenna at 32 feet, Conrad RDS unit. Underlined are new.

An odd 2002 for FM DX. I logged exactly 100 new stations in the three early to mid June openings, 72 of those on Jnue 14 alone. The skip on June 1 was nice; after all those years of DXing in the southeast, it's fun to hear stuff I never got out there. The California loggings were a nice surprise; I was hoping to get all the way out to San Francisco but no such luck, although I had KTVU-2 Oakland on TV about half an hour after hearing Sacramento. I enjoyed June 13, some strong signals from good distances. I had one eye on TV, hoping for WLBZ-2 Bangor, but no luck. Still I wouldn't have thought I'd get my first Maine FM from that far into the state! June 14 has to be in my top 5 of all-time openings on FM. The only 'complaint' was that the cloud hardly moved for hours. Every time I'd go back through the frequencies the same stations would still be in, like WALK-97.5...AMazing!

All in all I'd rank this as a better season if the 100 new loggings had been spread outAMongst more openings. As it is, the season was great while it lasted. FM log total is now 731. 73s Matt.

The tropo season has been bad for everyone else, but good by my standards because this is the first season I am really DXing.

Note 1- "Lite Rock 103-5 and 107-5". 316 miles. Never thought I would get it. Note 2- Not really tropo, but over a local and only 100 watts. Note 3- Was doing a bandscan before trip to visit relatives in RI and was surprised. Note 4- Never thought I would get this one. Note 5- Tried FOREVER to get this one and I finally got it! Note 6- very brief Es, but a relog on KKZY. Note 7- Was offair for a very long time, came back with a fringe signal. More distant WZBG much stronger.

KEITH MCGINNIS Winthrop MA Equipment: Yamaha T-85 with an APS 9 antenna at 15 ft AGL. Underlined are new.

RADELCO "BAR-X" CONICAL ANTENNA

with the ORIGINAL High Channel Director Bar

King of the Conicals!

Director Bar definitely improves performance on high channels where reception is most difficult.

Heavy duty construction thruout. Rugged 1" cross boom. Aluminum elements specially engineered to reduce vibration and noise. All boom fittings are pre-assembled.

SINGLE STACK consists of single Bar-X array. Ubolt mounting. Fits mast up to 11/2".

DOUBLE STACK consists of 2 bays, complete with jumper bars.

Model RS-752

List \$16.15

Ship. Wt. 381/2 lbs.

QUAD STACK consists of 4 bays complete with all linking bars and terminal block.

Model RS-754

List \$35.85

Ship. Wt. 20 lbs.

RADELCO DOUBLE STAR **ANTENNA** KITS

SAVE TIME! SAVE MONEY!

Made of finest materials and designed for trouble-free performance. Elements are tight butt seam aluminum tubing, reinforced with wood dowels. U-bolt mounting takes up to $1\frac{1}{2}$ " mast. Heavy gauge steel fittings with thick zinc plating. Mounting plates, U-bolts and saddle assembly are attached to becom before shipping.

REAL LOW PRICES!

Small TV Stations Reel Under Order To Go Digital

By David Lieberman, USA TODAY 7/16/2002

Duhamel Broadcasting Enterprises has provided a nice income to the Duhamel family since World War II.

First a radio company, it entered the television age with KOTA in Rapid City, S.D. The station beams ABC shows and local news to the No. 175 TV market: 88,000 viewers spread over an area the size of a triangle from Washington, D.C., to Boston to Buffalo, N.Y.

So company President Bill Duhamel was stunned when the federal government ordered all TV stations — even in tiny markets such as his — to buy the towers, transmitters and other gear needed to join the long-awaited and fitful national march from analog to digital television (DTV).

"I would guess it's going to take three to four years of operating profits just to pay for the first stage" of retransmitting ABC's digital signals, he says. The full transition can cost up to \$3 million per station.

"The deal I have with the family is, they better make their living someplace else. It's not a great situation."

A lot of station owners in small markets feel the same way about DTV. For them, it's not just a troublesome mandate. Many of them see it as a threat to their survival.

They find it next to impossible to amass the needed dollars in the midst of the worst ad recession in decades. And they grumble that the conversion mandate hits small stations harder than big ones.

"The cost really doesn't vary a whole hell of a lot whether you're in New York or Yakima," says Elizabeth Murphy Burns, president of Duluth, Minn.-based Morgan Murphy Stations. "In some cases, the cost of converting to digital is more than the station is worth. Right now, we're sort of stymied."

Federal officials ordered the national conversion from analog to digital TV in 1997. It seemed like a good idea. They wanted to spur development of high-definition TV (HDTV). They wanted to save valuable spectrum — six or more non-HDTV digital channels fit in airwaves used by one analog channel. And they wanted to raise billions by selling the spectrum saved to wireless companies.

But the transition has been rocky. Cable companies balked at carrying stations in both analog and digital form during the change. Digital TV sets remain costly. Consumers have shown little interest.

And nobody seemed to consider the plight of smaller stations.

Some 68% of the USA's 1,240 commercial television stations failed to meet the government's May 1 deadline to begin transmitting some digital programming. The majority of the laggards are in small markets. Just 13% of the 443 stations that now offer DTV are in the 110 smallest markets — those smaller than No. 100, metro Brownsville, Texas.

They'll have to move fast, though, unless they can persuade the Federal Communications Commission or Congress to give them more time. "The law says you have to do it, and if you don't, they have the right to take your license back," says CEO Don Cornwell of station owner Granite Broadcasting.

The industry's National Association of Broadcasters warns that consumers may lose in the rush. Stations scrounging for cash "have to cut back on news or services to a community to fulfill a government mandate," says Edward Fritts, NAB chief executive. "That's just wrong."

In fact, several news operations at Emmis Television's 15 stations — in midsize markets such as Orlando, Wichita, Omaha and Topeka — have felt the pinch. "Everything from cameras, news production systems and satellite trucks have had to fall to a lower priority, and some have been eliminated" to accommodate DTV, says Randall Bongarten, Emmis president.

The threat is real

Industry analysts say small-station owners aren't just crying wolf.

"These guys have really got a problem," says Sanford C. Bernstein's Tom Wolzien. "It can cost \$3 million to convert to digital. But a smaller TV station is lucky if it makes \$300,000 a year in free cash flow "

The government's General Accounting Office reached a similar conclusion in April. In a survey of station owners, it found that:

Digital expenses represent an average of 11% of yearly revenue for the mostly big-market stations that have already made the transition. By contrast, the costs for stations in the 100 smallest markets, when they do go digital, will be about 242% of annual revenue.

Lack of money was "one of the most prevalent problems" for stations that haven't made the transition.

Some 6% say they can only pay for DTV by putting themselves up for sale.

About 56% of station owners say that consumers in their markets have "low" interest in DTV. An additional 7% said their viewers have no interest in it.

The last point, a consumer yawn on DTV, helps explain lenders' reluctance to help stations. "When you go to bankers for a (DTV) loan and they look at return on investment, there isn't any," says Liberty President James Keelor.

There's no mystery why. Digital conversion raises stations' costs. Advertisers supply virtually all of a station's revenue. But advertisers won't pay extra for their ads to appear on DTV when only a handful of consumers have bought TV sets capable of receiving digital signals.

The FCC gave stations some relief in November.

"For the first time, the commission created the possibility of an extension of time based on financial hardship," says Rick Chessen, who chairs the FCC's DTV task force. "You can't just come in and say, 'I don't have the cash.' You have to show why your financial condition precludes the build-out."

The FCC has gotten 193 hardship requests but says it doesn't track them by market size, so it could not say whether small stations dominate the list.

In another easing of the burden, the FCC cut the requirement that a station transmit digital signals to everyone in its current broadcast territory. That lets small stations with big areas install low-power transmitters that reach homes just in their immediate home city.

"That downscales a number of items needed for the investment," says Dale Mowry, vice president of transmission systems for Harris, which supplies about two-thirds of the market for DTV transmission equipment. "A station can get on the air with a digital signal for as little as \$160,000."

There is disagreement in the industry, however, over whether that's a smart investment in the long run. Mowry says it is. He thinks most of the equipment can still be used later when the FCC sets a date for stations to raise power to reach everybody.

But others say that low power would leave a lot of viewers feeling left out now and that the equipment may not last that long. "I wouldn't call it a waste of money, but when you want to go high power, you'd have to throw it out," Cornwell says.

Low-power technology also is just part of the story.

Whatever the power level, many stations still have to pay much more to build or modify their towers to accommodate DTV. They would pay higher electric costs. And production costs would soar to produce local programs.

Several station owners in rural markets add that low power doesn't solve one of their biggest problems: To cover vast territories, they often have several repeater stations that basically just relay programming from the largest outlet in the group.

The FCC wants each of these repeaters upgraded to carry DTV.

(continued on page 16)

DTV Interference Issues Loom

As stations move to full power, problems among stations are expected to increase

By Ken Kerschbaumer Broadcasting & Cable 6/24/2002

Industry experts warn that, when broadcasters get on-air with full-power DTV signals, interference issues like that being experienced by WBOC-TV Salisbury, Md., may be the norm rather than the exception.

"I think it's inevitable that there are going to be a lot of these problems, and a lot of it was predicted," says William Meintel, president of Chantilly, Va.-based TechWare, which was hired by the FCC to create the software used to make the DTV propagation tables. "We just haven't seen it because there aren't a lot of stations on the air and an even smaller number on-air at their full power. And I think that, once these stations start firing up with their full-power signals, we'll see a lot of interference to NTSC, and it may be worse than what was originally predicted."

Two weeks ago, WBOC-TV filed an emergency request asking the FCC for relief from interference that its signal is getting from the 950-kW DTV signal of WHRO-DT Hampton Roads, Va., located nearly 120 miles away. In April, when WHRO-DT made the move to full power, WBOC-TV began receiving consumer complaints (even from cable subscribers) not only from the area of its viewing audience closest to Hampton Roads but also from Dover, Del., which is about 150 miles away from Hampton Roads.

The cause of the interference in the case of WBOC-TV is "duct skipping," a phenomenon in which the signal skips across a body of water, causing interference where it usually wouldn't occur. It is not just a DTV phenomenon. Analog stations, typically in Florida or Louisiana, have been subject to duct-skipping interference for years.

WBOC-TV General Manager Rick Jordan says the situation is unique because ducting was not taken into account in the FCC's DTV interference modeling. WHRO-DT's tests showed interference of only 0.9%, well within acceptable limits, but they do not take into account the ducting interference.

"I wish that 0.9% was all that we were receiving, but I have cable systems as far north as Dover, Del., receiving an unbelievable amount of interference," he says, adding, "It's also unbelievable that propagation can have that much impact" from so far away.

The concern is obvious, Jordan says: The analog signal is the station's livelihood, and there are only a handful of DTV viewers.

"I'm hoping that this will be resolved with a gentlemen's agreement," he adds. "And I hope everyone sits down at the table and says this is a real-world issue and not that the computer model says this doesn't exist so we're done."

WHRO-DT plans to file a reply to the FCC concerning WBOC-TV's complaint, according to spokeswoman Donna Hudgins. "Everything that we've built and constructed has complied with the FCC's regulations," she adds. "And our engineers don't see that the facts presented really demonstrate a reception problem that needs extraordinary action by the FCC."

The situation is similar to one experienced in 2000 on Lake Michigan. WMVS-DT Milwaukee's signal was interfering with that of WOOD-TV Grand Rapids, Mich. The solution then was for WMVS-DT to voluntarily cut its transmission power by 75%.

That was a temporary solution, because the FCC told WOOD-TV that the interference from WMVS-DT was acceptable within the Grade B contours.

Today, WMVS-DT is back on at full power, and WOOD-TV has spent about \$200,000 putting in an LPTV translator transmitting its signal on ch. 46 to serve cable headends and viewers within that Grade B contour.

"The rules provide up to 10% interference within a Grade B signal," explains Mike Laemers, director of engineering for WOOD-TV, WOTV(TV) Battle Creek, Mich., and WXSB(TV) Grand Rapids. "That doesn't sound like a lot of people, but, if you have a cable headend that is considered one of those 10% being affected, that equals a lot of people. That headend is serving 40,000 households."

The potential number of complaints about DTV interference seems destined to rise to flood levels when it comes to stations on or near large bodies of water.

"Anytime there's a large body of water with an unobstructed path," says Laemers, "interference is going to happen a lot, not only when temperature inversions occur."

Complaints may spread to land-locked stations as more stations increase DTV power levels, although just how large of a problem it will become remains to be seen.

"The root problem is that some people think that the DTV spectrum was spectrum that wasn't being used," says one industry source. "For all practical purposes, there was no available spectrum on the East and West Coasts."

MSTV Vice President, Technology, Tom Gurley points out that the spectrum of a digital station is noise-like: Any interference raises the noise level and creates snow and sparkles in the signal. Analog-station signal spectrum is very concentrated around the visual and aural carrier, causing interference that is much more distracting to viewers.

Meintel concurs. "Digital is different than analog, and the interference characteristics are different. The FCC knew there was going to be interference, but it was the only way to assign the digital channels."

So what is the solution? Meintel says lower power levels may be the only way to solve interference troubles because changing channel assignments is not easy and may just move the problem elsewhere. "You can play with the statistics all you want, but it's not going to solve the problem."

The problem with lowering the power is that digital broadcasters then lose service in some areas.

Meintel says that the extent of interference problems from DTV signals remains to be seen. But everyone seems to agree that it could become a fairly large number. The question is, what can the FCC do?

"If the interference is a temporary thing, then the commission is not likely to do anything," says Meintel. "If the station causing the interference is complying with all of the commission's regulations, I don't know if there is anything the commission can do about it."

Gurley says that, if the digital station is operating at a power it was licensed for and the allotment table says it can operate at, what the FCC can actually do remains to be seen. "If the FCC does something for a station that is getting interference from that signal, then they almost have to start looking at the whole table again."
