# Vhi-UhiDIGEST

The Official Publication of the Worldwide TV-FM DX Association

FEBRUARY 2003

### THE WORLDWIDE TV-FM DX ASSOCIATION

Serving the UHF-VHF Enthusiast

THE VHF UHF DIGEST IS THE OFFICIAL PUBLICATION OF THE WORLDWIDE TV-FM DX ASSOCIATION DEDICATED TO THE OBSERVATION AND STUDY OF THE PROPAGATION OF LONG DISTANCE TELEVISION AND FM BROADCASTING SIGNALS AT VHF AND UHF. WTFDA IS GOVERNED BY A BOARD OF DIRECTORS:

TOM BRYANT, GREG CONIGLIO, BRUCE HALL, DAVE JANOWIAK AND MIKE BUGAJ.

Editor and publisher: Mike Bugaj

Circulation: Mike Bugaj Treasurer: Dave Janowiak Webmaster: Tim McVey Editorial Staff: Tom Bryant, Steven Wiseblood, Victor Frank, George W. Jensen, Jeff Kruszka, Keith McGinnis, Fred Nordquist, Matt Sittel, Doug Smith,

Thomas J. Yingling, Jr. and John Zondlo, Our website: www.anarc.org/wtfda

ANARC Rep: Jim Thomas, Back Issues: Dave Nieman

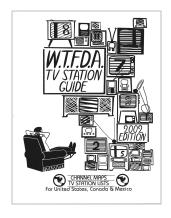

**FEBRUARY 2003 EVUD** 

Finally! For those of you online with an email address, we now offer a quick, convenient and secure way to join or renew your membership in the WTFDA from our page at:

http://fmdx.usclargo.com/join.html

Dues are \$25 if paid from your account and \$26 if paid by credit card because of fees charged. And of course you can always renew by check or money order for the usual price.

## The 2002 WTFDA TV STATION GUIDE

Start your new year with the most comprehensive listing off North American Television stations in print! Just \$23 US will get you one. Mail your check or money order

today. Make it payable to Dave Janowiak and mail it to John Ebeling, 9209 Vincent Avenue S., Bloomington, MN 55431-2157. Remember, there won't be a station guide for 2003 so get your copy now for the 2003 DX season before they're out of print.

Well, what can we say. This has been one heck of a winter from Buffalo to Daytona Beach, from Atlanta to Minneapolis. It has been *cold*. Not just cold...frigid! It snowed in Daytona Beach and Nashville went down to zero one morning. This is winter? Yes, I guess it is!

I've been walking around the house singing "I Love New York". I have a feeling that this will be another great convention.

And those antennas in this month's cover? Those belong to me and the rotor is frozen and will have to be replaced this spring.

So, sit back, keep warm and enjoy this VUD. We have some great reading for you

### WTFDA CONVENTION 2003!

WTFDA Convention 2003 will take place in Western, NY, brought to you by WTFDAers in Rochester (Scott Fybush, Rick Lucas, Jerry Bond), Buffalo (Greg Coniglio and others) and all points in between (Jim Renfrew). Look for a motel announcement (tentatively in Batavia, halfway between Rochester and Buffalo with a great shot into Canada on FM and TV) and more details in the March VUD.

## The Mailbox

P.O. Box 501, Somersville, CT USA 06072 MIKE BUGAJ MBUGAJ@SNET.NET

#### **FEBRUARY 2003**

Welcome to the Mailbox for February. We've had a rather uneventful January in most of North America. A couple of minor Es events were noted on the 5<sup>th</sup> and 6<sup>th</sup>, but nothing of a significant nature.

But then again, this is winter in North America. We can't expect much in the way of dx this time of year.

If there is any news in January, the news is that we have dates scheduled for the WTFDA convention this summer. The dates are July 11-13 and the location is Batavia, New York. Batavia is an easy place to reach from the east and from the west. All you do is take your favorite ramp to I-90 and take it to Batavia and get off at exit 48 (route 98). I did this drive back in September and it's an easy 6 hour drive from New England. Some details have yet to be confirmed. We'll let you know more when we find out.

#### **MEMBERS AND MORE**

Well, it's nice to see another Canadian member in our ranks. Hello to **Eric Conchie** who lives in Tweed, Ontario. Eric signed up on the internet with Paypal. Greetings, Eric!

We have a long list of renewals. Glad to have all of you aboard for another year:

- Melvyn Larson (MN)
- Wally Dickson (MA)
- Steven Wiseblood (TX)
- J Conway Dabney (MS)
- Bogdan Chiochiu (QC)
- Humberto Molina (El SALVDR)
- Adam Rivers (MA)
- Robert Fischer (AK)
- Glen Hale (KY)
- Lenny Goldberg (OR)
- Dave Pomeroy (KS)
- Todd Emslie (AUSTRALIA)
- Gill Morgan (MO)
- Tom Bryant (TN)
- Roger Sabella (IL)
- Russ Edmunds (PA)
- Peter Baskind (TN)
- Charles Gauthier (QC)
- Albert Gordon (CA)
- Jim Thomas (CO)

Long time member John Vervoort has

left Brooklyn NY and reports in from Murray, KY, his new QTH. John sent a quick note that he doesn't miss Brooklyn in the least.

Peter Baskind sent in a couple of his QSL cards with his renewals. These are *really* sharp cards. I picked the one above mainly because I think it will copy better. If you have one, send it along with your dues. And by the way, thank you ALL for renewing.

Jesus Perez checks in again from Havana: 'Well Mike, let me tell you that I am making some friends of mine in other cities in this country to record some programming including the local TV channel identifications, since I want to make a collection of every of those logos to send you. It is going to take me a little of time since there are around 14 local stations and I have friends having VCR's in four cities, but I am sure I will get to do it all. Some of the stations produce good documentaries about their local geography too.

So far, one friend is going to record something from TELEYUMURI-Matanzas City, another friend is going to record something from TELEPINAR-Pinar del Rio, then, another friends will do the same from TELETURQUINO-Santiago de Cuba and TV CAMAGUEY-Camaguey City, and also a friend will do all his best (he doesn't have VCR ) to record something PERLAVISION in Cienfuegos City. So hope to take pictures of every of those logos recorded with the use of a digital camera and send them to you or to Jeff in Baton Rouge in Louisiana for the joy of the rest of the members of our club, OK? Have a nice day, Your friend, Jesús" It sounds like a great idea to me and I know that almost everyone, TV Dxer or not, will love to see them!

Well, it's an abbreviated Mailbox for February. We'll see you next month! -Mike

Thanks to John Zeis, Dennis Smith, Bill Draeb and Brock Whaley for information in this month-s column.

The ACDTV@ stations in Canada are experimental operations. I saw one in Hull, Quebec in passing (also on channel 67) but can no longer find it. It looks like they-ve been experimenting with a singlefrequency network in the Ottawa area. CITY-DT [53] in Toronto, however, is <u>not</u> experimental. This becomes the first DTV station in Canada to receive a permit for regular, commercial broadcasting. A condition of the permit is that they apply to increase power to 2.2kw by this time next year...

Yes, that-s an entire 40 watts at KHSD-DT in South An article in the Rapid City Journal indicates KSGW-DT in Wyoming will be on the air this spring. KELO-DT Sioux Falls will be on the air by the time you read this (channel 32, 869kw/589m), with KELO-s satellites elsewhere in the state signing on later this year.

Also noted in the Journal, plans to rebuild KDUH-4's lost 2,000-foot tower in western Nebraska. KDUH claims to have replicated coverage to 70-80% of their viewers with a temporary transmitter and some translators. They do expect to have the new tower in place by mid-September though. **KDUH-DT** also began broadcasts around The paper says A... from their Christmas. Scottsbluff transmitter...@ However, they have special temporary authorization to use a tower at 42-54-44N/103-39-38W, which is the Nebraska/South Dakota border between Chadron and Hot Springs, and nowhere near Scottsbluff. This is a DTV transmitter I think you really reasonably can assume nobody is watching; 40 watts at 42 meters in one of the most sparselypopulated parts of the country!

John forwarded an update from the Philadelphia On or before 23 December, WUVP-65 moved from New Jersey to the new Philadelphia community tower. The new facilities are listed above. WYBE-DT on channel 34 began testing from the same tower early in December, but as of January 2<sup>nd</sup> John was only seeing a dead carrier. Up in Allentown, WFMZ-DT on channel 46 is still off. Finally, he says the coordinates listed for WPPX-DT 31 in last month-s VUD are wrong. A tower planned for that location couldn t get zoning

approval and will not be built. I note this station is now listed at the same community tower as WUVP-65 and WYBE-DT 34.

Santa Barbara TV update from Dennis Smith:

- K15BD (KCET-28 translator in San Luis Obispo): Possibly switched from off-air feed from K55AP to satellite feed direct from Los Angeles? See K26FT. This translator is to be bumped from channel 15 by KSBY-DT. It will nearly quadruple its power when it moves to channel 16, and will have more than 10dB more power than KSBY-DT, whose tower it shares...
- # K15DB (KTBN-40 translator): Poor picture quality, dark picture since early November.
- # K21FP (TBN, Bakersfield): I made a mistake in December and tagged this station as a KCET-28 translator. It isn+t; it-s a TBN, formerly K55CN. The KCET-28 translator in Bakersfield is K67FS. (Which is moving to channel 46...)
- K26FT (KCET-28 translator): Used to lose its KCET-28 feed when K55AP went off the air. However, K26FT remained on the air during K55APs recent extended dark period. Presumably K26FT has switched to satellite feed directly from Los Angeles.
- KCET-28 (PBS, Los Angeles): Dennis confirms that KCET itself is not on the air 24 hours. Most days, KCET operates from 6am to midnight. TV Guide indicates college courses may bring KCET on the air early, at 4:30am, on Thursday mornings.
- KSBT-LP 32 (America-s Store): Blank screen only, with good audio, from December 2<sup>nd</sup>. Disappeared completely around Christmas and still off in early January.
- KPMR-38 (Univision): Off the air for two days in mid-December.
- KTSB-LP 43 (Telefutura): Off the air on December  $2^{\rm nd}$ , Returned the next day but with very low audio power. Then, on December 27<sup>th</sup>, developed same darkpicture fault observed on K15DB.
- K46GC (CTN): Began broadcasts at reduced power but has been gradually increasing to full power. However, as of January 1<sup>st</sup>, has been broadcasting a blank screen only. (Like KSBT-LP, with good audio...)
- K55AP (KCET-28 translator): Disappeared on October 31<sup>st</sup>, but suddenly returned on December 6<sup>h</sup>. In the past, this translator has occasionally Aphantomed@ XHJK-27 and KSDX-LP 29 onto channels 54 and 56. However, it appears a satellite feed is now available (see K26FT) so this may no longer happen. Time will tell.

With regard to the Aphantoming@on K55AP, Dennis notes that when that did happen, K26FT (which translated K55AP) did not show the phantom signals on channels 25 and 27. Of course, its a relatively rare situation where a translator relays another translator, so the chances of this Adouble

phantoming@ are extremely rare. In cases like this where it is possible, it is also possible the second translator has better filters. While K55AP may not have been able to reject the adjacent channel 27 and 29 signals, it is very possible K26FT could reject the phantoms on channels 54 and 56 at its input.

Bill saw WACY-DT 59 on the air for the first time on November 22<sup>nd</sup>. The facilities listed are for special temporary authority (STA) which I presume they re using. Other operating DTVs in Green Bay are WBAY-23, WGBA-41, and WFRV-56. The first two are operating at full power; WFRV has a STA for 115kw. It looks like they want to move to channel 39. No sign of WLUK-51, WPNE-42, or WIWB-21 yet. Nor of new analog station WMQF-19 in Michigans Upper Peninsula. (However, other sources say WMQF is on, so Im going to list it. Its a Fox affiliate with some UPN and WB programs.)

I know many DXers are lamenting the high cost of DXing DTV. (They really shouldn±. Hauppauge DTV tuner cards are now available on eBay for under \$250, and DTV Aset-top boxes@ can now be had at Circuit City and similar stores for similar prices. The set-top boxes can be connected to regular analog TVs. (possibly through an inexpensive Radio Shack ARF modulator@ if there isn± already a video input jack) Many models will also allow you to connect a VGA computer monitor.

Anyway, Bill has found a way of getting into DTV DX that-s even cheaper. Indeed, <u>free</u>. Provided

youre lucky. (So far, Bill isnt.) The DTV stations in Green Bay have been running contests to give away digital TVs. Bill has been making a serious effort at winning a DTV from one of his locals. This has happened in other markets; give it a try!

Emmanuel Granado wrote from Edmonton questioning some of the area channels in my database. He also passed along two web addresses that may be of interest to those DXing Canadian stations. Check out Nelson Media on <a href="http://members.shaw.ca/nelsonmedia/">http://members.shaw.ca/nelsonmedia/</a> and CDN:TV on <a href="http://www.cdntv.cjb.net">http://www.cdntv.cjb.net</a>. The latter site offers video clips and network lds.

Three applications for new LPTVs on channel 37 have been dismissed. Surprised? I am a bit unclear on what was going on here though. 47CFR0.283 has to do with which matters may be handled by the Chief of the Media Bureau without going to the whole Commission. 73.3566 states that applications patently inconsistent with FCC regulations will not be accepted for filing. And 74.603(c) states that radio studio-transmitter links may continue to operate in the 942-947MHz band until a separate rulemaking is concluded. (Which has what to do with low-power TV?!)

Its been a slow month. The holidays ensured that not much would happen at the FCC or CRTC. I expect the flood of DTV activity to reopen next month though. In the meantime, heres hoping for plenty of winter tropo!

200

KSWT 16

#### **DTV STAs**

The following stations have special temporary authority to operate their DTV stations at reduced power:

### Western TV DX

VICTOR FRANK 12450 SKYLINE BLVD. WOODSIDE, CA 94062-4554 frank@horizon.sri.com

**Dennis Park Smith,** 3605 San Remo Drive, Santa Barbara, CA 93105-2523 (805)687-7803

This report is for December 2002. Again surprisingly, there was some southern California tropo activity (to San Diego/Tijuana, 200mi/320km). Despite conditions that were still mostly cool and unstable as in November, there were a few occasional stable days which helped the tropo ducting (no particular warming this time), until mid-month, when instability and storms commenced in earnest, with no further coastal tropo except for a tiny bit betweens storms on Dec. 27.

Dec 1-2 am: None (Continuing from Nov 25)

Dec 2 eve: Poor
Dec 3 am: None
Dec 3 eve-4: Very poor
Dec 5-6 am: Fair

Dec 6 eve-7: None (Dec 6 eve slight rain)

Dec 8-9: Poor Dec 10-11 am: None

Dec 11 eve: Fair (rather suddenly)

Dec 12 am: Poor Dec 12 eve: Good

Dec 13 am-14aft: Poor (Dec 14 night some rain) Dec 14-27 am: None (Dec 16 aft heavy rain)

(Dec 19 nigh moderate rain)

(Dec 21 rain)

Dec 27 eve: Barely fair for apx 3 hrs. Dec 28-31: None (Dec 28 eve rain)

Best of DX to All. Dennis

William Eckberg, 1032 Sterling Rd., Dixon, IL 61021

December 12 saw weak but briefly viewable tropo to AL and across TN to 600 mi. The weather map showed sleet and rain across TN, AL, GA, and southward. Sleet is sometimes a necessary ingredient for tropo. No local enhancement was seen.

For the first time on December 28, I triangulated an Es cloud and got a rough measurement on rate of movement. Perhaps from the data an estimate of the size could be calculated. To get the data only one station was received at each QTH on channel 2 and reception was brief—a rare happening.

Letheridge-2was received eight mi SSW of Dixon, IL for 10 minutes centered on 0443. Calgary-2 was received three mi NE of Toulon, IL for ten minutes centered on 0503. The midpoint of the Es cloud at 0443 was six mi west of Linton, ND and at 0503 was 16 mi SW of Bismark, ND. The cloud moved 42 miles NW in 15 minutes and traveled 168 mph. Does this correlate with other observations? I am no expert on Es propagation. The info might be interesting to someone researching Es propagation. The picture was excellent, but no audio was heard at my QTH.

A very quiet fall season for DX. The search for DTV signals livened things up, but more often than not there was too weak a signal to decode. I was teased more than once with Topeka, Kansas City and Cedar Rapids signals.

The payoffs were on November 9 and December 15, and both days featured the added bonus of 300 mile plus DTV catches. Interestingly, WISC and KYTV's analog counterparts have never been logged here (thanks to KMTV).

Locally, only WOWT-DT-22 stays on more or less 24/7 (but is off occasionally), while KETV-DT-20 airs about 4 hours of programming nightly. The 'slop' of DTVs 20 and 22 onto 19 and 21 has been significant, but strong DX will make it through, so I feel confident that I'm not losing too many analog channels. Once the Iowa and Nebraska PBS DTVs sign on, I may feel differently, but I'm hoping they will have downtime like their analog counterparts' nightly sign-offs. DTV log total is now 13, and overall is 590 for TV. 73s Matt

2032 WTND-LP 106.3 Macomb on the air! WTND-LP 106.3 Macomb Webfeed

http://live365.com/play/10653

There are a slew of new DTV stations listed as being on the air around here, but I am having little luck in getting them. My guess is that most of them are at very low power. DTV total @ 98.

73, Jeff

### It's Winter!

Rotors freeze and high winds bring down antennas in the best of installations.

### But wait! There's hope!

In about 7 more weeks winter turns into spring. Dxers come out of hibernation to check on their DX installations and make needed repairs.

#### SPRING ARRIVES MARCH 21

(Southern DXers can ignore this public service announcement)

Steven C. Wiseblood 28 LBJ Blvd. Brownsville, TX 78521 stevenwisebl@hotmail.com

ABBREVIATIONS:
AFA: American Family Association
CC: call letter change&: satellite programming
CL: city of license change
CX: a construction permit has been canceled
C1,C2,etc: a change in status to that
FM license class
DA: directional antenna

DA: directional antenna
DE: station has been deleted
FC: format change

GA: granted amendment to the table of

FM allocations
GE: granted extension of construction permit
GX: granted replacement of expired permit
LC: license to cover filed
(means station is ready to come on air)
MC: multiple-city legal ID
NC: no change yet on a reported change/permit

ND: non-directional antenna

NO: not on the air

NS: new station granted
NW: new station signs on
OSA: one-step application granted for change
PA: proposed amendment to change FM

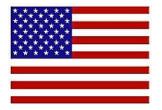

table of allocation

table of allocation
PC: power change on the air (">" for increase,
"<" for decrease, when known)
PG: power change granted (">" for increase,
"<" for decrease, when known)
QC: frequency change occurred
QG: frequency change granted
RA: silent station returns to air
PE: station requests extension on permit

RE: station requests extension on permit RX: station requests replacement of expired permit SG: slogan change or update

station is silent

XA: dismissed amendment to FM allocations XC: transmitter site change occurred XG: transmitter site change granted

### Has Your Dead Rotor Got You Down?

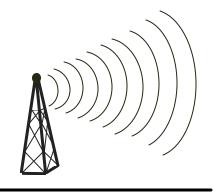

WE ALL KNOW IT'S A BRUTAL WINTER IN MUCH OF NORTH AMERICA.

If your rotor has died in the low temperatures and high winds and you have no idea where to look for your next rotor, here's help. I have recently purchased a ton of new and used rotors from a friend in the rotor business who was getting out, if anyone needs some standard duty Channel Master or HD rotors. I also have a ton of CDR and Yeasu rotors and a few Alliance HD-73 rotors. Some I have to rebuild and go thru. But I've got a bunch of new in-the-box units for great prices. So if you're frozen up. let me know!! STAY WARM. -Rich Wertman

### 20 YEARS AGO THIS MONTH!

The VUD featured the BBC Crystal Palace transmitter on the cover.

Technical Topics featured photos and specs on the Finco series of FM antennas, the FM4-G and the FM-5. It also compared them to the CM Stereo Probe 9.

Central FM DX's header was "Another Dead Winter." Some things just never change.

Jeff Kruszka, Editor 5024 S. Braxton Ave. Baton Rouge, LA 70817 jkruszka@bellsouth.net

February 2003

Here's the last of the photos from Girard Westerberg, Lexington, KY:

KXJB-4 Valley City, ND 1305 mi Es seen 6/14/02

WLS-DT-52 Chicago, IL 317 mi Tr seen 6/8/02

And now for some photos from Roy Barstow, Teaticket, MA. Roy recently rebuilt his DX shack and as you can see, has it stocked with loads of antennas and receivers. Roy has 3 TV's, 4 VCR's, 5 rotors, 8 amps, and 12 coax lines coming into the shack from outside antennas!

Below, on the North tower he has on top a FUBA UHF, followed by a Blonder-Tongue high band, and a B-T low band. On the roof tripod he has his high-band meteor scatter magnets: on top a 10 el. cut for ch. 11-13, and below is a 10-el. cut for ch. 7-8.

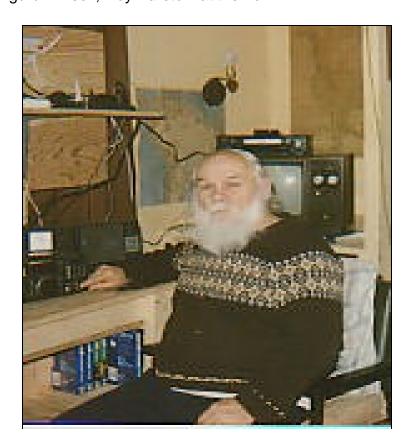

On the South side of the house, he has a 10-el. cut for ch. 2-3 and fixed in position for Trinidad recepton (!), then an 8-el. low-band B-T fixed toward Cuba, a 10-el. cut for ch. 2-3 and fixed toward Central America, a B-T low band (rotor but no amp) for Es to the South, and in the background, a 7' UHF dish:

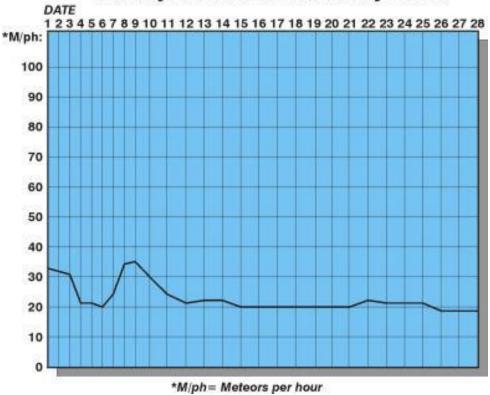

Finally, at ground level we have a 6-el. cut for ch. 5-6, with trap for ch. 6, fixed and no amp, for ch. 5 Ms work. Behind that, on the shed top is a 10-el. cut for ch. 4 with rotator (no amp), again for Ms work.

And here he is, the DX guru himself, Roy Barstow at the helm:

#### February 2003 Meteor Scatter Projections

#### **Meteor Shower Guide**

February is an "off" month for meteors. We have five minor showers peaking in February, and these are the Aurigids (Feb 5-10), Alpha Centaurids (Feb 8/9), Beta Centaurids (Feb 8/9), Chi Capricornids (Feb 13/14), Delta Leonids (Feb 22/23) and the Sigma Leonids (Feb 25/26). As the chart above indicates, none of them are biggies. The random meteor count is best on the 8<sup>th</sup> and 9<sup>th</sup>, and this coincides with the Centaurids showers. Good luck!

## Technology: Viacom wants FCC to require HDTV anti-piracy technologies

By JON HEALEY, Los Angeles Times

(December 23, 2002 8:58 p.m. EST) - Viacom Inc., parent of the CBS television network and Paramount Pictures, has threatened to stop all high-definition TV broadcasts on CBS unless federal regulators mandate certain anti-piracy technologies by this summer.

CBS is the leading source of free, over-the-air HDTV, transmitting most of its prime-time programs and many sports broadcasts in the format for the last four seasons.

In comments filed Dec. 6, Viacom told the Federal Communications Commission that it would transmit no HDTV in the 2003-04 season unless the commission mandated "broadcast flag" technology to deter digital TV broadcasts from being retransmitted over the Internet.

Viacom warned the FCC that without

protections for free over-the-air broadcasts, HDTV programs would shift to more secure cable and satellite services. Some Viacom programs already are heading in that direction: 11, HDNet of Dallas On Dec. announced a deal to rebroadcast TV series several defunct from Paramount in HDTV on cable and satellite.

Α variety programmers, TV manufacturers and high-tech companies have backed the concept of a broadcast flag, which would require future TVs, computers and other digital devices to block digital TV shows from moving onto the Internet. But the proposal has drawn sharp criticism from some technology companies and consumer advocates, who warn that it would hamstring innovation to guard against nonexistent threat. а

## BACK TO THE BORDER

In order to set the stage for a 'hot' new story, a trip back to "TV TIME TUNNEL" in the July 1989 VUD will be helpful. Away we go!

#### INTERNATIONAL INTRIGUE

This unusual chain of events began in 1961 when KCND-TV began telecasting on channel 12 in Pembina, ND, with a primary objective of drawing advertising dollars out of the half-million plus Winnipeg market (which had more people than the entire state to which KCND-TV was licensed). The tower was situated just south of the US/Canada border 55 miles due south of Winnipeg and one of the tower guy lines was anchored just a few feet away from Canadian soil. Thanks to tabletop flat terrain, the station put a good signal into the Metro Winnipeg area.

KCND-TV was an independent, but did manage one major coup d'etat! They carried the "Tonight Show With Johnny Carson"... never before seen in Winnipeg.

After ten years on the air, a lot of red ink, and some bad breaks regarding Canadian advertising, the channel went dark and re-mained off the air for better than 10 years.

Shortly after KCND-TV bit the dust, CKND-TV (note the similarity in call letters) went on the air in Winnipeg. Meanwhile, the ex-KCND-TV tower re-mained in place at the border; tower lights blinking but no signal being transmitted...for another 10 years!

Eventually the tower (which was part of the KCND/CKND deal) was dismantled and shortly afterword re-assembled at Minnedosa, MB, where it serves as the 'stick' for CKND-2, a re-broadcaster of CKND 9 in Winnipeg.

The final chapter in this bizarre affair is that after being dark for so many years, channel 12 in Pembina has been reactivated and is now KNRR-TV, a satellite of KVRR-TV in Fargo.

There's a new tower at almost the exact location of the former KCND structure. There is also a new

Winnipeg reception problem in the form of adjacent channel interference from CHMI-TV (13) with transmitter near Elie, MB; about 25 miles west of downtown Winnipeg.

###

#### **NOW...THE "HOT" UPDATE!**

When KCND cranked up in 1961 the skimpy studio/office building was at the edge of the village of Pembina, and just a couple of blocks east of Interstate 29. The transmitter was about 10 miles west. The station went on the air in the fall, and experienced a relatively trouble-free startup.

In mid-summer of the first full year of operation a problem cropped up. On very hot days, something happened to the KCND-TV video. "Sparkles" and occasional dropouts would begin at about 1 or 2 PM, worsen, and then begin to disappear about 8 or 9 PM. Remember, it can get mighty hot up there. 100+ isn't uncommon..and along the 49<sup>th</sup> parallel, the sun doesn't set until after 10 PM.

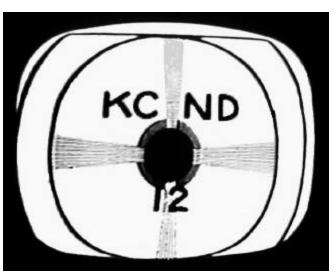

After a good bit of head-scratching, some sharp engineer locked onto the problem.

Heat rising from the concrete surface of fourlane Interstate Highway 29 was creating inversions that were deflecting the STL signal and causing the dropouts. The microwave path was only 15 feet above the road surface.

The problem was solved by building a lightweight 50 foot tower beside the studio building, and moving the STL transmit dish up to the top of it from the roof of the one story studio building.

Amazing stuff; surely too good to be forgotten!

###

This off-the-air photo of the KCND-TV test pattern reveals what may have been one of the crudest lettering jobs in circular test pattern history. It looks like the call letters and number were sketched onto the pattern template with a 'magic marker'.

## SATELLITE NEWS

#### George W. Jensen 4604 Antanna Ave., Baltimore, MD 21206-4220 SCISATMAN@AOLCOM

There are a number of changes to list this month.

Here goes - TELSTAR 7 - delete 681 - Vision ID Card and 724 - Unused.

AMC1 - transponder 20

now ID's as MTV2 and on the KuBand side - delete Americas Collectibles

Network on transponder 18 - it is now elsewhere.. Also on AMC1 Ku is an

unused or unld'd 780. Now to AMC4 - add the

following - Transponder 10 - HBO2 East VC2, 12 - HBO2 West VC2, 17 - MoreMax East VC@ and 19 -

HBO Signiture - East VC2.
On TELSTAR 5 - C-Band - 602 is now N3 and the Nebraska Public Television

HDTV feed is on 603. GALAXY 3 - delete the

following - 16, HBO Plus East, 17 - MoreMax East, 19 - HBO Signiture East

and 20 - HBO Plus West as well as the NFL 4DTV Digicipher feeds on 400, 401, 402, 403 and 404.

ADD - AMERICA 1 ON Transponder 21 - one of it's new homes. On the Ku

side - delete the CCTV 4 channel on xpdr 24. I want to relist the digicipher/4DTV channels on GALAXY 11 - they are as

follows:

400 - NBA Television. 500 - Unknown, 600 -

Ovation, 601 - Bloomberg, 602 - VTV - Varsity Television, 603 - KTVD - Ch 20 -

Denver, Colorado, 604 -

KVMD Ch 31 - Los Angeles/29 Palms, California,

605 - KJLA Ch 57 - Los Angeles, California, 606 - KXLA Ch 44 - Los

Angeles/Rancho Palos

Verdes, California, 607 - JCTV - religious pop videos (it seems) 680 -

The Church Channel, 750 - International Channel, 751 - TV 5 Paris,

France, 752 - CCTV4 - Peking, China 780 - Access Television Network 1,

781 - Access Television Networl 2, 800 The SET of which there may

eventually be a 1, 2 and 3. 801 and 802 are barker channels for

Crawford Communications.

AMC2 - KuBand - delete 400, 401 and 402 - American Sports Cable Network

and finally - Intelsat K at 21 West is no longer

beaming any material in this direction.

That's all for this month - see you in 30. - George

#### **New System Uses Indoor Antennas to Improve Digital TV Reception**

Los Angeles Times

Hoping to boost the appeal of digital television, News Corp.'s Fox Group unit and Philips Research announced a new technology Wednesday that they say will deliver perfect digital TV signals to more homes through indoor antennas.

The technology resulted from three years of research into digital TV reception in four major metropolitan areas. The companies' study found no fundamental problems with the way stations broadcast digital TV; instead, the shortcomings were in the digital TV receivers inside people's

The work by Fox and Philips is just the latest in a series of efforts across the television industry to improve indoor reception, one of a handful of issues slowing the transition to digital TV. Such

improvement is critical for viewers who use antennas but can't have or don't want one on their roof, particularly those in densely developed cities or hilly neighborhoods.

Even homes with cable or satellite TV frequently rely on antennas for one or more of their sets, such as a small TV in the kitchen. Researchers have found that up to 40 percent of all viewers receive some television through an antenna.

The study by Fox, the Australian National University and Philips Research, an arm of Royal Philips Electronics, found that the biggest difficulty for digital receivers is distinguishing between the original broadcast and the echoes bouncing off of buildings and hills. On a conventional analog TV, such echoes cause ghosts, or multiple images. But on a digital TV, those reflections can wipe out the entire picture.

Andrew G. Setos, president of engineering for Fox, said the team studied the reflections in hundreds of locations around the four cities, using newly developed tools to capture and analyze the echoing signals.

"It turns out everyone had made bad assumptions" about the reflections' impact, Setos said. Using computer models of the most severe conditions, the researchers developed software that microchips in digital receivers could use to filter out the reflections more effectively, he said.

The Federal Communications Commission ordered broadcasters five years ago to switch from analog to digital transmissions, which promised flawless reception, richer pictures and cinema-quality sound.

But the public has been slow to make the leap.

#### MORE DXING IN A DIGITAL WORLD

Well, a couple of issues ago I speculated on the DTV and the future of TV dxing. A few members responded to that article, and here we share their thoughts with you:

I think that's an excellent analysis of DT/analog DXing. It truly is a new frontier, and something that those of us who enjoy DXing must embrace if we are to continue in the hobby.

There are several things I've learned in a few months with a WinTV-D card and now a settop box. Analog and digital signals can and do co-exist on a given channel. With strong tropo, I've been able to pull out 140 mile analog dx on channels with digital signals just 10 miles away. For program viewing, digital is spectacular. I get a somewhat snowy signal from an analog WKRC about 65 miles to my north, but the digital WKRC is flawless. From a program viewing perspective, I'm actually wishing for all of the semi-local digital stations to go full-power so I can quit watching the analog signals altogether.

It's a trade-off for DXing, but I still have some open channels to do that on. –Glen Hale--Georgetown, KY

-----

I don't seriously DX TV - only FM & AM. I have yet to see an analog computer TV card that can receive the same # of stations I can get on a regular TV and rabbit ears - and we've tried a few including Hauppauge.

But Mike hit on something I've thought about at some length. I figure that as long as there are any significant number of FM analog signals out there, and if the conditions are strong enough, I'll still be able to hear those. I don't yet know what digital signals I'll be able to hear on an analog tuner, but if I can hear them, and conditions bring me some, I'll hear them. Pretty much the same story on AM.

But as of right now, I cannot possibly justify the expense involved in converting to digital equipment of equal quality to the analog equipment I have. It's quite possible that by the time prices get to be reasonable enough to consider by today's standards, I may be in a more limited-income situation. Since I don't use either AM or FM for much beyond DX'ing other than occasional sports events and the local news station, I have no driving need to go digital to replace entertainment value. The good news here is that there's probably a significant portion of the non-DX'ing population in that same situation.

My hope continues to be that the market won't support the cost/benefit equation of digital radio as presented today. And if that hope is lost, then I may also have to choose to find other ways to use my hobby time. And, even though I know I'll get an argument from some on this because I have before, I'm one of those who believes that no amount of letter-writing, complaining, etc. by a small minority special-interest group of DX'ers will make any difference to the FCC, the industry or Congress.

But if enough consumers across the board refuse to convert, then that's a voice which might be heard.... -Russ Edmunds - PA

-----

What is needed here is software or windows module or whatever it's called to record the screen when there is a station on and stop recording when the screen is black. This would allow us to log stations without having to stare at a black screen and still have a good picture of what came in. Sort of like leaving the Conrad RDS thing going all night to catch MS.

My ATI All-in-Wonder card has the ability to record but you have to start and stop it yourself. It would also take "screen shots." It is for analog signals or cable, not for DTV, and I've never hooked it up to the rooftop system, just cable, DVD, VCR and back out to the TV. But it is neat to put up all the channels in thumbnails and have them updated every few seconds. Then you just click on a thumbnail that you want to watch in the ATI window and it pops up. Pretty cool!

I think that we'll be able to transition OK from analog to digital. As for how much skip and how far - well that remains to be seen.

Never surrender, never give up!! --Guy T. Falsetti, Lockport, NY

-----

The Jan.2003 Sound & Vision magazine (Pg. 92) has the following: Add-on tuners, mainly available from Samsung, Sony, Mitsubishi, and Zenith, generally cost between \$500 and \$800". Maybe your figure of \$400 is a bit low. –John Ebeling, MN

Mike's e-mail got me thinking about some things: A downside:

If we ever reach a point where all the analog signals are gone, and have been replaced by their digital counterparts, I can foresee having trouble determining CCI and subsequently attempting to null one digital signal for another (i.e., how will you know there are two signals there).

An upside: Guy brought up an interesting possibility: the 'security camera wall of screens' where you, potentially, could have many DTV signals on your computer screen simultaneously and could DX many channels at once! And the potential to record them

could mean you really could DX every channel all at once! We know we've missed signals before when tuning the band... maybe we won't do that in the future.

A question: When this transition occurs, will all the little TBN translators convert to digital too, or will the cost prove too high and they'll all go away? Or is there any special rule that would allow them to continue operation as analog (I'm assuming not). Is there any chance some of our dials will be cleaned up with the 'survival of the (financially) fittest'?

#### A wish list:

I note that KVBC-DT-2 is now on the air in Las Vegas. If there's one I'm looking for on skip to log here, that is probably it. Other interesting targets for skip that NAB claims to be on air include:

WBBM-DT-3 in Chicago WKYC-DT-2 in Cleveland WWMT-DT-2 in Grand Rapids WHP-DT-4 in Harrisburg PA WMAZ-DT-4 in Macon, GA KTVM-DT-2 in Butte, MT

That's seven skip targets out there for any DTV DXer to be looking out for when skip fires up. Some of them strike me as very promising targets, free from nearby alternate signals (e.g., Macon, Butte and Harrisburg)... I think we'll learn a lot in 2003 about what is possible when it comes to skip.

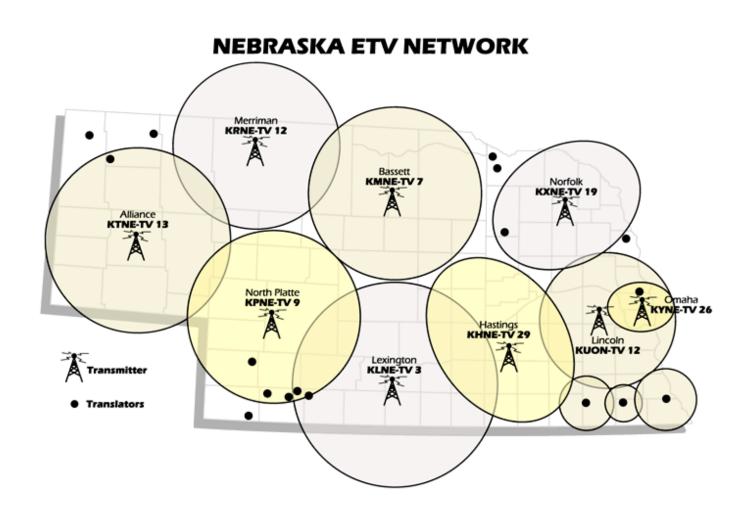

I fully expect at least one of us to log DTV skip in the next year. How hard will it be to get it to stay in long enough to lock? We'll see. Heck, a number of us, myself included, have seen the DTV snow of WKYC-DT via skip...but I didn't have the DTV card installed yet.

A closing thought: I look forward to the possibility of logging them... and there are more potentially that will be on air with those. In a way it's comparable to the pioneering efforts of earlier DXers on various other bands. We'll be the ones who will find out what is possible. Imagine if there was a massive skip opening and multiple DTV signals came in at once... could we get instantaneous IDs on our skip, similar to RDS/XDS?

The future may have some neat stuff for DXers! And while I certainly enjoy DX the way we've known it for years, I see that DTV is certainly a DX-able signal, and one I'll continue DXing! –Matt Sittel --NE

----

As long as the FCC doesn't change the characteristics of the atmosphere..there will always be ionospheric & tropospheric abnormalities around to produce DX. This at least is certain and will prolong our hobby no matter what form the signals themselves take!
--Bill Hepburne –ON
