

# Vhf-Uhf DIGEST

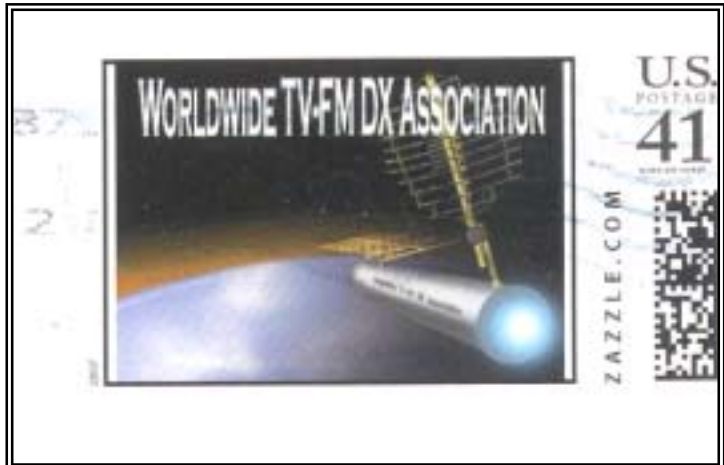

The Official Publication of the Worldwide TV-FM DX Association

JANUARY 2008

The Magazine for TV and FM DXers

**13**  
**MONTHS**  
REMAINING UNTIL  
ANALOG TV SHUTOFF

**HAPPY NEW YEAR!**

*TV and FM DXing was never so much fun!*

# THE WORLDWIDE TV-FM DX ASSOCIATION

Serving the UHF-VHF Enthusiast

THE VHF-UHF DIGEST IS THE OFFICIAL PUBLICATION OF THE WORLDWIDE TV-FM DX ASSOCIATION DEDICATED TO THE OBSERVATION AND STUDY OF THE PROPAGATION OF LONG DISTANCE TELEVISION AND FM BROADCASTING SIGNALS AT VHF AND UHF. WTFDA IS GOVERNED BY A BOARD OF DIRECTORS: DOUG SMITH, GREG CONIGLIO, BRUCE HALL, KEITH MCGINNIS AND MIKE BUGAJ.

Editor and publisher: **Mike Bugaj**

Treasurer: **Keith McGinnis** wtfda.org Webmaster: **Tim McVey**

wtfda.info Site Administrator: **Chris Cervantez**

Editorial Staff: **Dave Williams, Jeff Kruszka, Keith McGinnis, Fred Nordquist, Nick Langan, Doug Smith, Peter Baskind, Bill Hale and John Zondlo,**

Our website: [www.wtfda.org](http://www.wtfda.org); Our forums: [www.wtfda.info](http://www.wtfda.info)

JANUARY 2008

Finally! For those of you online with an email address, we now offer a quick, convenient and secure way to join or renew your membership in the WTFDA from our page at:

<http://fmdx.usclargo.com/join.html>

Dues are \$25 if paid to our Paypal account. But of course you can always renew by check or money order for the usual price of just \$24. Either way, it's still a bargain!

*eVUD members please send \$10 for membership or renewal to [mbugaj@snet.net](mailto:mbugaj@snet.net).*

## HAPPY NEW YEAR!

Welcome to a very special year. This is the year we've either all looked forward to, or just plain dreaded. It's our final year of analog television.

The cover this month is a special cover and seems perfect for the January VUD. Our cover this month was created by WTFDA member Paul Mitschler of Albuquerque, NM. Paul has sent us some nice material over the months but this takes the prize. One could almost see Captain Kirk piloting the USS DXable as it travels through the cosmos searching for those weak, elusive TV and FM DX signals. And we indeed will be "boldly going where no man has ever gone", at least on this planet, as we transition from analog to digital television.

## MEMBERS AND MORE

During the period from 11/20 to 12/14 we received renewals from **Randall Trapp** (MN), **Les Pruss** (VA), **George Hamer** (NY), **Matt Sittel** (NE), **John Reiger** (WI), **Steve Solomon** (MA), **Robert Delaney** (IL), **Gary Olson** (FL), **Alan Radella** (PA), **Ed Norris** (IN), **Adam Rivers** (MA), **Paul Mitschler** (NM), **Tom Bryant** (TN), **David Wurl** (WI) and **James Roggentine** (CA). We thank all of you for continuing on with the WTFDA!

**George Hamer** (NY) wants to know more about the Insignia TV we wrote about a couple of issues ago. I asked **Curtis Sadowski** to reply because he knows more about it than I do, and here is his reply: "Well, it will pick up some of the stronger local stations with the three-foot long whip antenna it has. It might actually work for DX on a better antenna, but I haven't tried that yet, using it to watch the local stations I can get in down at Champaign. As for the comparison, I've got a 2" Casio which can run rings around this on analog. Insignia is the house brand for Best Buy. If he gets one from there it'll probably be full price, which is too much all things considered. Radio Shack allegedly has a portable DTV which I haven't seen. These days it's hard enough to find a radio at one of those much less a TV. He might want to put off his purchase for a few months, I'm thinking all the handy-dandy small sets should be showing up from China about then. That is, if the Insignia portable DTVs haven't

frightened the manufacturers away. They haven't exactly been a money maker, and have had a very high return rate, either for quality issues, or from dolts who can't figure it out. Ebay is still saturated with returned sets on offer from closeout houses. It might be worth while for George to have someone pick up a set for him there if he's het up on getting one."

George also wanted to know how the Conrad RDS Managers work. I have no clue how they do what they do. But you can hook up an RDS Manager directly to a tuner in a couple of ways. One is through the Multiplex-Out jack of the tuner (if it has one), or by finding and tapping into the correct point in the audio chain inside the tuner (and finding this point could be fairly easy, a pain or impossible, depending on the tuner.)

This unit does not need to be fed into a computer. The RDS Manager has an LCD screen that allows you to read the information there. But when used with a computer and downloaded software, it's much more sensitive than it would be when used without a computer.

Occasionally one of these shows up on eBay. The German eBay tends to have more of them up for auction. The Conrad unit has been discontinued for a long time now. With many FM DXers now using Sangean HDT-1 tuners for DXing, you never know when someone will decide to sell theirs RDS Manager.

## COAT HANGER ANTENNAS

Here's a question from **Al Radella** that somehow makes me think of Bob Cooper. Alan writes "Back in the sixties, while stationed at Oxnard Air Force Base above Los Angeles, there was an NFL playoff game in San Diego below Los Angeles that was blacked out in our area and the citizenry was outraged. The Los Angeles Times or the other LA newspaper published an article and picture of an antenna made from wire clothes hangers and we made it and were able to watch the game. Come to think about it, it probably was an AFL game. Can't remember when the merger was. Anyway, I've always been one to try to do more with less having traveled a bit and had to improvise in motel rooms, apartments in so many situations. It always intrigues me to

see what I can get. Maybe one of the members can remember this. In any case, thanks for all the club has provided over the last year. "

### **SPECTRALLY INEFFICIENT**

**Eric Bueneman** takes issue with Doug Smith's idea of placing HD stations on the 82-88mhz band. Eric writes: "I have read Doug Smith's comments on what to do with the 82-88 MHz band in the December 2007 VUD, and using that band for IBOC-DAB is not viable. The major issue is with its spectral efficiency; no matter what frequency the radio station is operating on, IBOC-DAB still wastes 600 kHz of valuable spectrum space; there won't be any room to accommodate all the stations. The best way to implement digital radio is to find frequencies above 1 GHz to use the technology on. Receivers for IBOC-DAB are not selling very well; many of the glitches cannot be fixed without risking further harm to analog-only stations on adjacent channels. Full-time IBOC on AM has been nothing but a disaster; I can no longer hear KFAB 1110 with KMOX 1120 now broadcasting the destructive technology around the clock. I have also lost several semi-local stations on FM due to IBOC, most notably KDJR 100.1 De Soto, MO (KATZ-FM on 100.3 has been in digital for several years). AM and FM radio should remain analog only because analog is spectrally efficient, and provides superior sound quality and signal coverage over digital radio. I also don't think channels 2 through 6 should be used for digital radio; it should be used for rural DTV only. In other words, assignments on these channels shouldn't be allowed in the top 100 markets with the only exception being if there isn't sufficient spectrum to allow a station like WTVF 5 Nashville, TN or WPVI 6 Philadelphia, PA to move to high-band VHF or UHF. DTV on low-band VHF could work in a small city like Rapid City, SD or Macon, GA, or even a small town."

### **720p or 1080i?**

Bob Cooper sent this item from his *Satfacts* magazine and although it pertains to New Zealand, we can all learn a few things from it.

"Bonner Martin (bonnermartin@entersurf.co.nz) has become one of several vocal television system designer practitioners questioning the Freeview (consortium) decision making terrestrial service a 720p standard here. But is it? In SatFACTS #159, Freeview's Steve Browning told us:

"Freeview terrestrial receivers (i.e. STBs) will be specified to decide SD and HD (including both 720p and 1080i). Each broadcaster will decide which resolution to use (there is no chosen standard and there is no need to do so)."

So contrary to early 'suggestions' pinpointing 720p as 'a standard' Browning is setting the record straight by assuring us each broadcaster will be able to set their own HD format, perhaps on a programme by programme basis. And, the terrestrial set-top boxes sold for approved Freeview use will include SD (576 lines interlaced), HD (720 lines progressively painted) and 1080i (1080 lines interlaced). What has not changed from the earlier announcement is only terrestrial reception sites will have access to HD; satellite Freeview receivers will have to get along with SD (see SatFACTS #159, page 6 for a detailed discussion).

Bonner Martin picks it up at this point:

"I recently inspected a Blu-Ray DVD demo on a 1080p 50" screen and within the demo DVD they showed the difference between 720p and 1080i using the same original source. Even with my less than perfect vision, the 1080i image had a great deal more detail (beyond that of the 720p comparison). The same display also allowed me to witness the difference between 1080i and 1080p. The DVD demonstrated an American baseball game, where the ball often travels at 160km/h and is a small object making its' proper resolution of most TV formats a non-starter.

"Another method of comparison involves long camera shots with a panning camera - the far side of the baseball park for example with the lens squeezed tight to pick out just a few people and then moving the camera sideways (panning). I consider catching the baseball in flight and the long crowd shots especially challenging although in a fast moving game like this there are ample other opportunities for HD to shine.

"The same scene was repeated three times on the DVD; one 720p, again on 1080i and then finally 1080p. There was significantly more detail with the 1080i and when all three were stacked up side by side across the screen (one-third each) it was only possible for me to differentiate the 1080i from the 1080p by a minute fine line separating the two.

"I cannot help but wonder if TVNZ is wrong in going with 720p rather than 1080i. I agree that it will suit the universe of 756p screens already in place and in the marketplace but is that not being short sighted to protect an inferior technology? Surely in five years time the 1080i and 1080p problems as they now present

themselves will be resolved; will we, then, as a country be stuck with either another receiver replacement round or a less than world-class video image?"

The arguments at very high design engineering levels have been with us for nearly a decade. The one written report which has survived as a 'reference standard' was published in the EBU Review (January 26, 2005) and the technology from that critical assessment has not significantly changed. Bonner contacted the editorial staff of this publication and asked:

"I read with great interest Philip Laven's article on HDTV 720p and 1080i and note that Yves Faroudja comments that the conversion from interlace to progressive does not work well at the 1080 line level. Is there an update to this technical paper?"

The answer (from Mike Meyer, Editor for the EBU Technical Review) follows:

"I am afraid that, sadly, physics prevents us from making a perfect upconversion for 1080i to 1080p - as much as we would like to - as Yves Faroudja said.

"If you look at the spectrum of an Interlace signal in three dimensions: vertical, horizontal, and temporal, you will see that the top vertical/temporal quadrant is missing. The interlacing has thrown away this high vertical detail/high motion speed information; this being how it achieves a 50% reduction in bandwidth. (Editor's note: Interlacing consumes approximately half the mega-bandwidth of a progressive signal, both starting from the same input source). In the past this was a good idea and a very efficient thing to throw away, in the 'CRT age', because it does not make a large contribution to our perception of picture quality.

"Today, things are different - and that is the problem - the new age of flat panels and content adaptive digital compression requires new thinking. For those who started HDTV during the 'CRT age' - which likes Interlaced signals, this is a problem. We now use flat panels which are all progressively scanned, and the technology of content adaptive motion compensation in compression, and this process needs the 'missing information' to work best.

"Simply put, there is no way to recover the missing vertical/temporal information in an Interlaced signal. Once it is gone, it is gone. No amount of clever processing can bring it back. The Interlace to progressive converters can be bad or less bad, but they can never do a perfect job; and this was Yves' point.

"So, the 1080i signal does NOT have a resolution of 1080 by 1920, it has a resolution which is limited vertically by a phenomena known as incomplete field aliasing cancellation at the top end. And what is more, the resolution falls off with motion speed. The faster the object moves, the less sharp the image!

"Furthermore, I should say that in Europe more or less everyone who uses 1080i rolls back the horizontal resolution from 1920 to 1440 (as they do in Australia) to reduce the compression artefacts. So for a 720p signal you have a luminance pixel rate (this is the important thing) of 74.5 Mpixels/sec, and for Interlace you have a rate of about 56 Mpixels/sec - somewhat less.

"Plus - the 720p signal also has 'square pixels' - equal vertical and horizontal resolution. The 1080i has more horizontal resolution than vertical resolution, for one reason being you need to multiply the number of lines by an 'interlace factor' which is a field rate dependent fraction.

"So you see that the static picture quality of a 720p signal is about the same as a 1080i signal, and the resolution of 720p when objects move is better. Please remember, then, that the simple calculation of number of lines times samples per line is not really the truth, and that perfect Interlace to Progressive conversion would require something of a miracle; a quality usually not found in consumer electronics.

"Sometimes broadcasters have other reasons for choosing 1080i - such as lower production equipment costs, and these may well be strong arguments, but I don't think there are any 'technical arguments of viewer quality'. Do you?"

Editor's footnote: Bonner in his original questions to the EBU folks pointed out a recent announcement from Panasonic concerning a new chip which they claim can hold (store) two full 1080i frames and the process that to 1080p. While this device might have some application to origin (transmission) end signal processing, the heart of issue boils down to Mike Meyer's insightful:

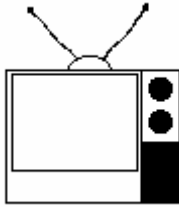

"Simply put, there is no way to recover the missing vertical/temporal information in an Interlaced signal. Once it is gone, it is gone. No amount of clever processing can bring it back."

Sometimes the most complex problems have the least complex answers. Our thanks to all involved for providing us with this quite brilliant education in a short span of space and time!

## **AND FINALLY**

Thank you all for the cards and all the nice comments you made about me on the tvfmdx list in December. I really appreciate your comments. It's been a good 6 years as your publisher and I hope I can do it for a few more. But I only publish what you give me to publish. You all play the biggest part and you keep the club alive!

I hope that the VUD/eVUD, discussion lists, wtfda.info and wtfda.org websites live up to your expectations. Happy New Year!

Thanks to John Lentz, Jim Thomas, Tom Bryant, and Bob Seaman (via Mike Bugaj) for information elsewhere in this column.

If granted, the channel 21 operation in Toronto would be the first DTV-only station in Canada. (not counting various experimental operations in the Ottawa area)

Yes, the new power for KUPT-DT is 380 watts, not 380 kilowatts. The minimum power allowed by the FCC for "full-power" stations is 100 watts.

K36ID in Beaumont, Texas is the digital side of KUIL-LP 64, the market's Fox affiliate. It carries Fox HD on subchannel 36-1 and a SD version on 36-2.

Severe weather in December took down WNEP-16's tower near Scranton, Pennsylvania. Their DTV antenna is on a different tower, so the digital signal on channel 49 is still on the air.

However, on the way down their tower also took the top off WVIA-44's. (the lower part of the tower, where WVIA-FM lives, managed to stay erect!) WVIA has a shorter backup tower for their analog signal, so that's still on the air, but WVIA-DT is still off at this writing.

Most Scranton/Wilkes-Barre stations were off at least briefly as either the ice itself or the collapse of the WNEP tower knocked out electricity on the mountain.

Jim Thomas reports seeing a weak DTV signal on channel 24 in northern Colorado. His first inclination (and mine) would be to think it's KRDO-DT in Colorado Springs. However, Jim said the Colorado Springs stations weren't coming in that day & his inclination was to think it was something else.

It looks like the best possibility is K24HQ-D in Boulder. This is the digital companion channel to K44CT, a translator of Denver's KRMA-6. (or in channel 24's case, KRMA-DT 18, in all probability. I should however note it would be technically possible and legal for K24HQ-D to relay an up-converted version of KRMA's analog signal.)

Jim also reports that Mayor Chuck Baroch of Golden, Colorado was soundly defeated in the November 6<sup>th</sup> election. Mayor Baroch led the (unsuccessful) opposition to the siting of Denver's DTV stations on Lookout Mountain, where their analog towers already are.

Getting closer to home... Tom Bryant reports hearing a mystery TV sound signal on 87.7MHz on his car radio in Nashville. He's also hearing it at home, on the city's far west side. It's not unusual to hear WPSD-6 Paducah sound on a car radio around here – but this station was not WPSD.

Tom did eventually get an ID for "White Springs TV", a national network. Some more digging turned up an ID for this station: WKRP-LP, Alexandria, Tennessee. Alexandria is east of Lebanon, about 40 miles east of Nashville. Not a bad haul for a 300-watt aural signal!

(I'm envious: I've yet to hear a thing from this station. DXing TV-6 video at my location requires a very strong TV signal, as I have a powerful 88.3 FM station only about 15 miles away.)

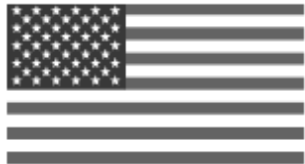

Good DX!

BC Vancouver	104.1 NEW	Applies for 8 kw/600 m: active adcon
BC Vancouver	104.1 NEW	Applies for 8 kw/600 m: indie rock
BC Vancouver	104.1 NEW	Applies for 8 kw/600 m: adult alt
MB Winnipeg	100.7 CHNK	CP granted for 60.2 kw.
NB Plaster Rock	91.7 CIKX-FM-1	Applies for FC 88.3 to avoid interference to new CBAF-FM-21
NS Glasgow	93.1 CKEC	After 54 years on the air, <i>CKEC Radio New Glasgow</i> has made the change to FM. The new East Coast FM was launched Wednesday, 12 December at 9:41 am, to mark the new frequency: 94.1 FM. The station is broadcasting at 80 kW from a transmitter at Mount Thom, Pictou County, reaching most of Northern Mainland Nova Scotia, as well as sections of Cape Breton and PEI. CKEC Radio began its career on December 23rd, 1953, with a power output of 250 Watts on 1270 kHz. In 1958 they moved to 1320 kHz, and the power increased to 1 kW. Later the power was increased to 5 kW. In 1989 the transmitter site was moved from Frasers Mountain, near New Glasgow, Pictou County, to Frasers Road in Abercrombie, Pictou County (about 7 km from New Glasgow). Before switching to FM, CKEC was transmitting at 25 kW. The two stations will now simulcast for three months before making a complete transition to FM. [via <b>Shawn Axelrod</b> ]
NS Grace Bay	89.7 CKOA	<b>New station is on the air</b> with 'Maritime Music' as <i>The Coast</i> .
NS Halifax	98.5 CKRH	<b>New station is on the air</b> with 19.9 kw/140 m, 43-55-55/66-06-10; a relay of CBH-FM Halifax (CBC R. 2) AC; Variety; FF. CP granted for 91 m, 44-41-11/63-30-39
NS Halifax	93.9 CJLU-FM	CP granted for new station with 100 kw-H/43 kw-V/160 m, 44-38-47/63-39-40 (same tower as CIOO 100.1, CKHZ 103.5, CKUL 96.5, CFRQ 104.3); to take the place of CJCH-920.
NS Halifax	101.3 CJCH	CP granted for new station with 100 kw-H/43 kw-V/160 m, 44-38-47/63-39-40 (same tower as CIOO 100.1, CKHZ 103.5, CKUL 96.5, CFRQ 104.3); to take the place of CJCH-920.
ON Elliot Lake	102.5 NEW	Applies for 865 w/117 m; religious, much relayed from CJTK-FM Sudbury
ON Goderich	99.7 NEW	Applies for 750 w/89 m, to relay CIYN-FM Kincardine. Previous permit for a CIYN relay here expired unbuilt due to a dispute with the tower owner.
ON Kingston	98.9 CKLC	<b>New station signed on</b> with 15 kw/132 m, DA, 44-12-36/76-25-05; to replace 1380 AM.
ON Pickle Lake	96.5 NEW	Applies for 50 w/20 m; religious,

ON	Thunder Bay	98.1	NEW	English and First Nations languages Applies for 50 w/20 m; to relay Pickle Lake religious station if granted			applicant submitted, within three months of the date of that decision, an amendment to its application proposing new technical parameters that are acceptable to both the CRTC and the Department of Industry. Meaning, the requested facilities were more powerful than necessary to replicate old AM coverage.
PI	Charlottetown	91.3	NEW	Applies for 50 w, religious (Intl. Harvesters for Christ)			
PI	Summerside	91.1	NEW	Applies for 50 w/11 m, to relay new 91.3 station in Charlottetown, if granted	NU	Alert	105.9 CHAR-FM Canceled ROA (moved to cable-only. Was the northernmost radio station in the world, at N82-27-12!)

**OTHER ACTIONS**

NS	Windsor	92.9	CFAB-FM	The CRTC received an application by Maritime Broadcasting System Limited to move its CFAB-1450 to 92.9 MHz with an average ERP of 23.8 kw-H/12.3 kw-V/159 m 44-57-08/63-55-30, which was denied. The applicant filed this application further to the Commission's direction in which the Commission stated that it would only issue a licence for this station provided that the	ON	Cochrane	104.7	NEW	AF denied for community station. Planning not adequate.
					ON	Ottawa	99.7	NEW	AF denied for CIWV-94.7 Hamilton relay
					ON	Peterborough	100.7	NEW	AF denied for CIWV-94.7 Hamilton relay
					ON	Timmins	100.7	CKOG-FM	Application for new station denied; inadequate plans for balance in religious programming (apparently in Canada, you can get call letters assigned before you get your CPI).

**NEW RULES FOR LPFMs  
 by Doug Smith**

On November 28, 2007, the FCC announced some major changes to the LPFM rules and FM translator processing procedures.

**TRANSFERS OF LPFM LICENSES & PERMITS:**

Originally, LPFM licenses & permits were not transferable to new owners (however, that restriction was frequently waived).

The Commission will now routinely allow transfers of the licenses of operating stations. The sale price may not exceed the depreciated fair market value of the physical facilities. The buyer must be legally qualified to hold a LPFM license. An anti-trafficking rule will be imposed: for three years after a license is issued, it cannot be transferred.

Only operating stations may be transferred. Construction permits must be built by the original permittee.

**MULTIPLE & LOCAL OWNERSHIP:**

Originally, a given entity could only control one LPFM station. However, this restriction was allowed to "sunset" in 2002. (since no further LPFM windows have been held, and transfer of LPFM licenses required a waiver, I don't believe any entity has managed to obtain control of more than one LPFM, even though it's been legal for five years.)

The FCC has reinstated this one-to-a-party rule.

Also allowed to sunset in 2002 was a rule providing a preference, in the case of mutually-exclusive applications, for applicants who agreed to produce programming locally.

This rule, too, has been reinstated. The Commission has also clarified the rule, providing that a program is only "local" the first two times it airs. A station may not produce a 30-minute local program and then play it back ten times and claim it aired 5 hours of local material. Only the original broadcast and the first rerun will count.

Finally, the original LPFM rules considered an applicant "local" if it's physically located within 10 miles of the transmitter, or if 75% of its board of directors live within this radius. The Prometheus Radio Project suggested this standard is difficult for rural applicants to reach. They recommended the FCC extend the distance to 20 miles for applicants outside the 50 largest markets. The Commission concurred.

**TIME SHARING:**

In cases where multiple mutually-exclusive applicants receive the same score under the points-based resolution system, the FCC gives the applicants 30 days to reach a voluntary agreement to share time. If no agreement is reached, a sequential time-sharing situation is imposed - one applicant is allowed to operate for a year or two or three, then their license is cancelled and another applicant is allowed 1-3 years on the channel, and so on. After all applicants have had a turn, the channel is declared vacant and is eligible for a new round of applications.

LPFM advocates argued 30 days is not enough. The Commission agreed to extend the negotiation period to 90 days. They also agreed that if, after a mandatory sharing situation is imposed, \*all\* the applicants involved reach a voluntary agreement, their licenses will be renewed for as long as they continue to apply

and to comply with the regulations. The FCC did NOT agree to renew LPFM licenses that remain in an involuntary sharing situation through their entire 8-year terms.

REC Networks cited a situation in Visalia, California where one LPFM station operates from 5-9 AM Monday through Saturday, and another station uses the same channel from 5-9 PM. This of course leaves 9 AM-5 PM and 9 PM-5 AM (and all day Sunday) unused. The FCC agreed to allow stations in such a situation to modify their voluntary sharing agreements to divvy up the unused time, without having to go through a new filing window. They will also allow new applicants to apply to use the unused time, but those applications can only be filed during a LPFM window.

Of course, when two or more stations share time on the same frequency, it's usually advantageous for them to also share the same transmitter! The problem is, that moving a LPFM transmitter more than 5.6km (about 3.5 miles) constitutes a "major amendment" that cannot be filed outside a filing window.

The FCC has agreed to modify this rule, to treat transmitter moves of more than 5.6km as "minor" if the move is made to consolidate several time-sharing stations' transmitters at a single site.

#### LENGTH OF CONSTRUCTION PERMITS:

Right now a LPFM construction permit is valid for 18 months. This differs from the 36-month period allowed for construction permits for other broadcast stations. An 18-month extension was frequently granted.

Some LPFM advocates suggested "normalizing" the permit period, allowing 36 months for all LPFMs. Others suggested this might result in permittees "warehousing" spectrum - obtaining a permit and preventing anyone else from using the frequency, but making no effort to construct the station.

The FCC decided its existing policy was adequate - LPFM permits will continue to be valid for 18 months, with another 18 months available if the permittee can show good cause why they couldn't complete work in the first 18-month term. Further extensions beyond 36 months are not likely. (though they didn't say they'll \*never\* grant a second extension...)

#### LPFM vs. TRANSLATORS:

First, a few statistics about the recent FM translator filing window . . .  
According to the FCC, 13,377 applications were filed by 861 applicants (this averages more than 15 applications per applicant).

~50% of applicants: filed one or two applications  
80%: filed ten or fewer applications  
97%: filed 50 or fewer applications

Radio Assist Ministries & Edgewater (which are co-owned): filed 4,219 applications

15 most active: filed 50% of applications.

R.A.M. & Edgewater: have already applied to sell more than half of the 1,046 permits they're already received and have completed the sale of more than 400 permits.

Of the remaining translator applications on file, the FCC has decided to process only ten per applicant. They will allow the applicant to specify which ten they wish the Commission to process.

The FCC says they hope this move will allow them to reduce the period between filing windows.

#### INTERFERENCE TO/FROM FULL-POWER STATIONS:

LPFMs are secondary service to full-power stations. They can be "bumped" from the air if a new full-power station is built, or an existing station seeks to increase power, change frequency, and/or move to a new site. The FCC says that so far, only one LPFM has been forced off the air this way, but LPFM proponents suggest nearly 150 stations are at risk due to pending full-power applications. The FCC itself has identified 40 LPFMs at risk.

This paragraph in the release is rather confusing, but what I \*think\* the FCC is doing is to eliminate completely the restriction on use of second-adjacent frequencies by LPFM stations. The presence of WKDF on 103.3 and WGFX on 104.5 will not prevent WRFN-LP from using 103.7 or 104.1.

Strangely enough, WRFN would NOT be allowed to use 103.9 - because a rider on the "2001 DC Appropriations Act" passed by Congress seven years ago still prohibits the FCC from relaxing \*third\*-adjacent restrictions. However, the FCC has voted to ask Congress to repeal this rider, and allow them to relax the 3rd-adjacent restrictions.

What I may instead be reading is that these restrictions are not lifted entirely, but that stations at risk of displacement may receive a waiver to use a second-adjacent channel, if no other channel is available.

Much to my surprise, the FCC has also proposed to prohibit upgrades to full-power stations in some cases, if those upgrades would "bump" a LPFM.

In situations where a change to a full-power station would displace a LPFM from its frequency; would cause serious interference \*to\* the LPFM (even if the LPFM didn't interfere with the full-power station); where no suitable alternate channel is available for the LPFM; and where the LPFM regularly provides at least eight hours a day of local programming; in those cases the full-power upgrade will be denied.

Merry Christmas and Happy New Year!

I've been sitting here in my office on December 11, watching channel 2 pop in and out with either Es or Ms, and I'm hoping for at least one good Winter Solstice opening!

Don Voegele passed along Christmas greetings and sent along some TV listings from Cortez, CO showing that they still get both NTV St Johns and CBUT there (via the SW Colorado Television Translator Association, <http://www.swcotv.org/>). When I was last in Cortez in 2001, it was like a dream – seeing so many distant stations OTA is a lot of fun, even if they are directly off of the satellite.

Don is also looking for an address for DXer David Kanaar of the Buffalo, NY area. I didn't see anything similar in the WTFDA membership list, so if you have it, please send it to me and I'll forward it on to him.

My snail mail seems to be working again, Dennis re-sent several items, and Jeff Kadet kindly re-sent the report that my computer ate, so let's hope the Western TV DX hiccups of the past couple months are history.

73, Dave

## **Dennis Park Smith**

3605 San Remo Drive

Santa Barbara, CA 93105-2523

Telephone (805) 687-7803

This report is for August, 2007. Southern California coastal tropo (to San Diego/Tijuana, up to 200 mi/320 km) continued very steady, though not particularly strong, for the entire month as observed.

Aug 1-2	Poor
Aug 3-28	VHF fair to good UHF poor to fair
Aug 29	Off to the Boise convention!

This report is for September, 2007, though it is abbreviated because of traveling here and there. I took Amtrak and bus to the Boise DX convention (a great time), then went camping and steam-train riding in Colorado with DXer Don Voegele, and then busses and Amtrak back to California. Later on was a driving trip to visit relatives toward San Francisco. Southern-CA tropo observed, to San Diego/Tijuana, up to 200 mi/320 km

Aug 29-Sep 15	The convention and camping
Sep 15 eve-16	Fair
Sep 17-23	None (unsettled wx)
Sep 24-30	Out of town to SF Bay Area
Sep 30 eve-Oct 1 am	Poor
Oct 1 eve	Good

(Ed.: Dennis's October report ran last month)

This report is for November, 2007. Southern-CA tropo is as usual with indoor antennas, to San Diego/Tijuana up to 200 mi/320 km. With cooling weather, tropo conditions are diminishing.

Nov 1-2	Variably poor to fair.
Nov 3	VHF very good (peaking briefly in the afternoon at excellent), UHF poor
Nov 4-5 AM	VHF very good, UHF poor
Nov 5 PM-17	None (cooler and unsettled conditions)
Nov 18-19	Fair (stable again, somewhat warmer)
Nov 20	Poor (cooling)
Nov 21-24	Variably poor to non (colder) (Nov 24 windy in spots in region)
Nov 25	Fair to good (but getting colder yet)
Nov 26-29	Variably poor to very poor
Nov 30	None (unstable, rain to south)

Best of DX to all, Dennis

---

The only ad I could make out on the inID ss on ch. 2 was for the "Universal card".there were others I missed. Then they started to play a movie or something which had a date and time stamp on the lower right of the screen.

i think this was WKAQ in San Juan, but don't need it. if it wasn't, what was it?

the signal was very ghosty. sort of like F2 but not nearly as bad.

23:43 WESH rearing its ugly head. I guess this is  
my 44th year of them ('63) also my first E-skip  
catch. I could barely get them in Daytona Beach in  
the van unless parked  
right on the beach  
23:58 WCBD-2 Charleston, SC

Denon TU-1500RD won on ebay for \$123 is  
working great. Now need to put on a larger tuning  
knob and the filters. The mute between channels is  
a downer as expected. Also the 100 khz tuning  
steps make it necessary to look at the freq. readout  
when changing freqs. 200 khz steps would have  
eliminated that.

00:11 Reno-2 is 1539 mi and never seen  
KWGN-2 is halfway between Reno and here  
00:24 Las Vegas-3, DTV snow on ch. 2 w/ KNAZ dominant

On the 14th I left on a trip to Bogota, Colombia for two weeks (a great city); and then another 2 weeks in Lima-Miraflores and Cusco-Machu Picchu, Peru. TV DXing is virtually impossible anymore, because of cable tv in hotel rooms, but looking at local cable channels is interesting. My spanish vocabulary increased dramatically on this trip out of pure necessity as very few people in either country speak any English. Peruvian cable tv is much more commercial than in Colombia. Peruvian FM, oddly, does not run many commercials at all. Bogota was all Spanish except for one French station.

73, Jeff

**John Ebeling**  
Bloomington, MN

Dxing from his cabin in Prosit, MN, a tiny dot in the Alborn Township, which consists of one tavern and a few lakes!! Lat:47.0107 Long 92.6190. Set used is a GE 19" with fixed antennas SE and S. CDT used.

Comments: This summer was very average for Es and I found no tr openings whatsoever. Also, where have the meteors gone? I seldom hear any meteor bursts. Usually there is a lot of Es to TX, but not so this summer. Only one new TX station. TX is my best state with 321 identified. I have been able to log 22 new Ed. Band stations so far this year. My total in the Ed. band now stands at 840.

I spent a week in Chattanooga, TN at a glass convention August 13-21 where it was a blazing 105 degrees and the highest humidity possible. Yet, listening to my car radio on the way home, there was no signs of tr at any time. Nothing new in august at all.

Acquired a Sangean HDT-1X-A very good tuner more sensitive or quieter (SN Ratio) and more selective than my old Akai AT-V04 (150s mod). My first tuner with RDS. It appears to take a pretty strong signal to display RDS info. Just Rochester and Syracuse stations with HD noted on FM - not very impressed for all the hype. Only WXXI 91.5 uses WXXI 1, 2 & 3. All the others have only main plus a second signal.

This is actually an antenna for shortwave. I have a dedicated FM antenna but haven't used it for awhile because it doesn't work that well indoors. I live 2 blocks from Lake Michigan and can hear stations from Western Michigan quite often. Not sure if that is any big deal because I think it's really only about 70 miles. However, was surprised to hear Rockford on 97.5 as I usually hear Kalkaska, MI, if anything.

---

**John Jefferson Box 203 Auburn, WA 98071-0203**

I hope your fall DX has been more inspiring than mine. The only event of interest since the skip season was a trip to New England from Sept. 7 – 17. I flew in and out of Providence, and drove through Rhode Island, Massachusetts, New Hampshire, Vermont, and Maine (all new states to me). I packed my inexpensive Yamaha TX-492 tuner and rabbit ears for air checks, not expecting it to provide much DX excitement. The Yamaha is NOT a DX machine, but it fits in a suitcase, unlike the bulky McIntosh MR-80, and if destroyed by the airport baggage handlers would have been easily replaced. The first night, in Middleboro MA, provided the most exciting catch: WBXB Edenton NC on 100.1, "WBXB, your love station", 9/8 at 3:41 am (500 miles). Also on 100.1 was WJRZ Manahawkin NJ with calls at 2:44 am (215 miles), and WPUR 107.3 Atlantic City NJ at 4:08 am, "WPUR Cat Country, Atlantic City", wasn't too shabby (245 miles). All that was done with the modest Yamaha. Otherwise, the best ground-wave/trops catch was CBTC Charlottetown PEI at the Thunder Hole parking lot near Bar Harbor ME on 9/15 @ 4:57pm (CBC news and a local reference I neglected to write down) with the rental Rabbit's car stereo (270 miles). The Rabbit radio was fairly decent – more user-friendly than the Yamaha for rapid presets & band scans, and equipped with RDS – but limited by the directional antenna (one of those in-the-window jobs, I believe). But the best distance was due to MS – WNOR 98.7 Norfolk VA (hard rock, "FM-99") 9/15 @ 12:17pm with the Yamaha (660 miles). It's too bad a cold front moved in on 9/8 and killed the coastal propagation, but there was certainly plenty to monitor just driving through so much new territory. In all, 425 new stations noted, 6 during a plane change in Las Vegas and all others from RI, MA, CT, NH, VT, ME, ON, PQ, NB, NS, and PEI – all but MA, CT, & ON new to my master log of 5700+ stations heard somewhere or other.

Please excuse the lack of organization. I've been run ragged at work ever since that much-needed vacation, and haven't had a chance to think much about this report.

## The Editor's Note

Happy New Year! The close of 2007 brought some decent tropo to the Deep South and occasional bursts of low-band E-Skip. Certainly we hope for an active 2008, but before we turn the page, we look back to the past season, highlighted by Roy Barstow's loggings from Cape Cod including several instances of UHF tropo from Florida. Congrats on a great season, Roy!

**Says Robert:** "The 2007 tropo season can only be categorized as a disappointment. The summerlike weather continuing well into fall somehow did not produce any tropo.

The 11/13 openings must have been true ducts (with simple enhancement, WLIO analog would have made WLWT-DT impossible). Channel 39 was already the channel with the most digital loggings at four. Now WKOI-DT has made it five!

The new signal(s) on channel 55 are a broadband noise over nearly the whole 716-722 MHz channel, but whereas the pseudonoise in an ATSC signal is concentrated in the upper third of the channel, this has many differing energy levels across the channel, no carrier, and "brick walls" right at 716.300 and 721.700. In Detroit, it makes WTVS (analog 56) difficult to tune.

My assumption is that the MediaFLO service has come online in the Detroit area. The hypersnow looks quite strong in Temperance, and looks exactly like that of an ATSC signal.

Glad to see winter Es came in on 12/2. KCWX was logged for the 19<sup>th</sup> time this year! For at least seven years, and as recently as 9/21, KCWX and WJBK have been at almost exactly the same carrier frequency, about 1/2Hz apart. Now the difference is umpteen-Hertz. Question is who moved, KCWX or WJBK?

So we close 2007 as an OK season for analog, but disappointing for DTV. No digital Es loggings, and only 8 new DTV stations for the Temperance log (at least three of these due to facilities changes, rather than great propagation)."

**Says Jim:** "Recently got some new equipment: Magnavox DVD Recorder/VCR with digital tuner Model ZV450MWB. Seems to be ok on digital (but hard to tell with no signal meter). Buffalo DT's 33 & 39 all the time others have to wait for tropo enhancement as with Watertown 35 & 41, Utica 29 & 30 – Syracuse all the time. Also got an RCA 26" LCD model L26WD21. Not as sensitive as the Magnavox (didn't lock on DT's 14 & 32). Also you can't enter a digital channel that wasn't scanned in to begin with – odd. Then got a 14" CRT TV with digital "Durabrand". Works best of all (even with rabbit ears & bowtie indoors). Locks with weaker signals-very easy tuning. Oh, analog on the Magnavox is terrible, the RCA is ok, the Durabrand is very good. All came from Wal-Mart on sale, \$180 Magnavox, \$378, \$95 Durabrand. I'll try and track down that RCA LISD20 locally. Merry Christmas & Happy New Year – Jim."

Boy, it sure has been quiet lately.

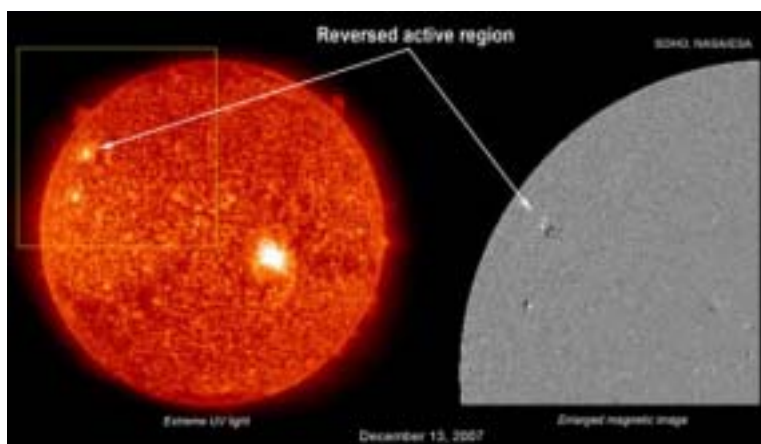

As I type, it is a couple of days after Christmas. Ordinarily, I expect to see a nice sporadic-E peak right after the 25th; in fact, December 26th seems to be the hot day, according to past years. So far this Holiday Season, there has been barely a whimper. This does not seem to be just a mid-Continent issue, save for a few openings up and down the Atlantic and Pacific Coasts, no one has been seeing too much.

Maybe, just maybe, the short Winter Seasons is late, not off. The ARRL January VHF Contest is coming soon, and occasionally, sporadic-E will filter in that weekend. When it does, it is a fun contest. The contest is the weekend of January 20<sup>th</sup>. Full rules can be found here:  
<http://www.arrl.org/contests/rules/2007/jan-vhf-ss.html>

\* \* \*

There has been much talk in amateur radio circles about the coming new solar cycle, Cycle 24. Here at the absolute bottom of the Cycle, as 23 is ending and we wait for 24 to start, there is almost no F2 layer activity above 14 MHz. That means, of course, we are still *at least* a few years away from those tantalizing and heady F2 days on 6 meters. Finally, though, we may be seeing the very, very early signs of Cycle 24.

The Solar Cycle is all about magnetism. As magnetic "knots" pop up on the Sun's surface, sunspots may follow. But, all spots are not created equal. When Cycle 24 begins, we'll see high-latitude spots on the surface, with reversed magnetic polarity to Cycle 23 sunspots. We may be half-way there. Recently, a reversed "knot" appeared, though, as I write, it has not become a true spot.

While this may be a hopeful sign, it appears that sporadic-E will be the only game in town for the foreseeable future.

Hopefully, by next month, we might have a few loggings. Gosh, let's hope so, anyway. As always, we encourage contributions of loggings, QSLs, and anything you might have that's interesting.
