CH3 TO CH12 WITH 8KW.

*TV and FM DXing was never so interesting!*

# THE WORLDWIDE TV-FM DX ASSOCIATION

*Serving the UHF-VHF Enthusiast*

THE VHF-UHF DIGEST IS THE OFFICIAL PUBLICATION OF THE WORLDWIDE TV-FM DX ASSOCIATION DEDICATED TO THE OBSERVATION AND STUDY OF THE PROPAGATION OF LONG DISTANCE TELEVISION AND FM BROADCASTING SIGNALS AT VHF AND UHF. WTFDA IS GOVERNED BY A BOARD OF DIRECTORS: DOUG SMITH, GREG CONIGLIO, BRUCE HALL, KEITH MCGINNIS AND MIKE BUGAJ.

**Editor and publisher: Mike Bugaj**  
**Treasurer: Keith McGinnis** wtfda.org Webmaster: **Tim McVey**  
wtfda.info Site Administrator: **Chris Cervantez**  
**Editorial Staff: Dave Williams, Jeff Kruszka, Keith McGinnis,**  
**Fred Nordquist, Nick Langan, Doug Smith,**  
**Peter Baskind, Bill Hale and John Zondlo,**  
Our website: [www.wtfda.org](http://www.wtfda.org); Our forums: [www.wtfda.info](http://www.wtfda.info)

MAY 2008

Finally! For those of you online with an email address, we now offer a quick, convenient and secure way to join or renew your membership in the WTFDA from our page at:

<http://fmdx.usclargo.com/join.html>

Dues are \$25 if paid to our Paypal account. But of course you can always renew by check or money order for the usual price of just \$24. Either way, it's still a bargain!

*eVUD members please send \$10 for membership or renewal to [mbugaj@snet.net](mailto:mbugaj@snet.net).*

## THE FINAL SEASON!

Here we go! The Es season is about to begin and it's going to be the last one for domestic analog television, so this year will be special. This is your last chance to take those final Es snapshots of those analog ch2 stations you all love to hate: WPBT, KGAN, WBRZ and the rest. Buy extra film or put more memory into your digital camera for all those shots because next year, they won't be there. So sit back, relax and enjoy the show that the E layer puts on every year. Next year, the season is going to be different.

Now that we're into warmer weather, we see changes happening to Bill Hepburn's tropo forecast maps. The black areas are giving away to some green and blues for the first time this year. Southern US DXers have been finding tropo about and it's spreading northward as coastal New England DXers are reporting tropo into New Brunswick. Midwesterners should have worked some tropo openings by the time you read this.

Make sure your antenna system is ready for this DX season. Check for damage to your coax and connectors and check for bent or missing elements to your antennas. Make sure your rotor still works. The worst time to notice that something won't work is in the middle of a super E skip opening. If you plan to do some work on your antennas, do it now before skip gets red hot. You'll thank yourself later.

## MEMBERS AND MORE

A big hello goes out this month to the following new members: **Hugh Hoover**, **Don Voegele**, **Ivan Silva** and **David Pierce**. Hugh lives in southern Portugal and has got some audio on the internet of multi-hop television E skip from North America on chA2 and A3. If you hear it you will be amazed.

Don Voegele is an old-timer who returns to the club through the courtesy of Dennis Smith in Santa Barbara, CA. Don has been helping Dennis with DTV Dxing from the Santa Barbara area and Dennis really appreciates it. Don lives in the state of Washington.

Ivan Silva comes to us from Brazil and shares a fondness for FM DXing with the rest of us.

And David Pierce is a youngster who found us through the Forums at <http://www.wtfda.info>. David lives in Virginia, goes to college and

does very well at FM DXing. Welcome to you all!

Renewals were received during the period of March 17 through April 15 from **Pete Taylor** (WA), **Todd Sprinkman** (WI), **Pat Dyer** (TX), **Ryan Grabow** (FL), **Jacob Norlund** (MN), **David Cox** (AL), **Aaron Mitterling** (IN), **Jason Hustedt** (NJ), **Gerard Hart** (NY), **Joe Perge** (OH), **Bill Dvorak** (WI), **Mike Cherry** (BC), **Kevin Short** (WV), **Greg Barker** (IN), **Milton C. Bay** (KY) and **Tim Clampit** (MI). Thank you all for staying for another year. There wouldn't be a WTFDA without you!

**Bill Dvorak** (WI) writes "I note that my good friend Tim Noonan recently joined WTFDA (for three years, Bill! -m) There goes my only excuse not to renew. (So Tim, now you *have* to stay! -Mike)

**Dennis Smith** (CA) writes about Don Voegele "I was kinda surprised to find out that he is not presently a WTFDA member. He and his wife Julia have been very kind to me in these recent years...It was fun last September traveling and camping with him...it is a thrill to combine my DTV box with his 5 foot UHF dish for some good tropo DX." (Dennis, if you go to our WTFDA.org website you will find a picture of Don in an AIPA convention photo.)

Got an email from **Ralph Strobel** (IN) mentioning that he's got his coupons and is ready to hit the streets looking for a DTV converter box.

**Andy Bolin** (IN) and I also exchanged emails regarding the lack of analog pass-through on the Insignia box. Without it, Andy considers this box worthless because after transition he'll be faced with a band full of LPTVs and translators at his location. When he found that LPTV and translator operators were initiating a lawsuit against the government demanding they quit selling boxes without analog tuners included, he wondered how these digital-only boxes were able to be built and sold at all. And so do I.

## WHAT CAUSES TROPO

You and I think we have a good idea about what causes tropo ducting. But we could be wrong. **Dennis Smith** reports: "For many years, there was a TV repair business in downtown Santa Barbara. They had a good antenna system at the time (before cable), 1950s -60s, receiving Los Angeles and San Bernardino/ Riverside regularly quite nicely

(90-130 miles) and San Diego/Tijuana on tropo (175-200 miles). Sometime in the 1960s, one of their staff and I got into a discussion of Santa Barbara to San Diego/Tijuana coastal DX. The gentleman told me that the cause of these signals from such stations as KFMB-8 and KGTV-10 San Diego and XEWT-12 Tijuana (a line from the old movies "I got it all figured out, see?") is *ionospheric skip* (like Es), double hop between San Diego and Santa Barbara with the midpoint where the signal comes down and hits the L.A. smog and goes up for a second hop. I then asked him, why is there never any rough fading that often comes with skip? Oh, he had an answer for that too – fading is there but at high VHF the fading is so fast that you can't see it."

### THIS MONTH'S COVER

The VUD cover this month comes from **Paul Mitschler** who writes "KNME is located on the NW edge of the campus for the University of New Mexico here in Albuquerque. I recognize the TV antennas and some of the microwave dishes but I do not know what the small cylinders are for. The bulk of the system points to the Sandia Crest where the transmitter is located. KNME is on channel 35 and carries 3 channels of programming."

### THREE PARTS OF THE WTFDA

It wasn't all that long ago that when you thought of the WTFDA, you only thought of the VUD. But when people began using home computers, David Austin created a club website on his own webspace and the club became known for a website plus a magazine.

Later on the WTFDA website went to webspace provided by the ANARC and Tim McVey tended to the WTFDA website.

Around three years ago Chris Cervantez offered us the use of his vBulletin software and he registered the domain of wtfda.info for the club on his own server and the WTFDA Forums at wtfda.info were born.

A year or so later, the time came that we had to leave Chris' server, and we looked around for a host and signed up with Dreamhost for two years and got a great deal. Dreamhost gave us gobs of webspace for a great price. We got so much webspace that we began to look for ways to use it all.

By this time the ANARC had dissolved. Our website was still there but the ANARC site was quite dead and we wondered how long the site would last before somebody would shut it down and turn the clubs using it into orphans. Rather than keeping it there to find one day that our website had disappeared, we decided to move the WTFDA website to the space we paid for with Dreamhost. We couldn't use wtfda.info for the website domain because the Forums had it already. So we registered wtfda.org and Tim

built the new club website from the ground up.

Dreamhost hosts the WTFDA website at wtfda.org and it hosts the WTFDA Forum site at wtfda.info. Plus it hosts the tvfmdx and amdxd email lists.

So now there are three parts to the WTFDA. One is the **WTFDA Forums**. It's a great place to post audio and video files and pictures. Almost all of it is public. At this time it's one of *the* places on the internet for people to talk about DTV reception and equipment, as well as DX, and DXers all over the world are finding it. It's a great asset to the club and keeps us visible to the public.

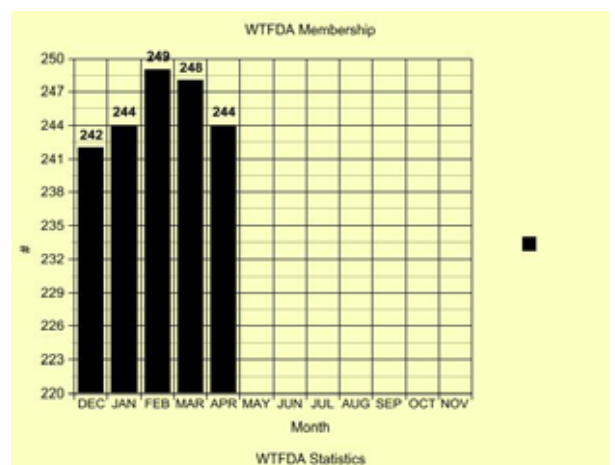

The second part is the **Official WTFDA Website** at wtfda.org. Some of it is public but much of it is for our members only. Because of the great amount of webspace we have available, we've been able to upload all the 80s VUDs and all of the eVUDs since August 2001. We are now in the process of scanning and uploading the series of VUDs from the 1990s and soon we will have all or most of the old AIPA bulletins available for WTFDA members. ***Any member can access these VUDs. All you need to do is use the "Contact Us" form on the website and ask for a username and password.***

This website also helps keep us visible to the online world and we've received email from folks who were once WTFDA members and find that we are still alive and well.

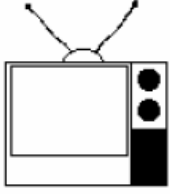

The third part of WTFDA is the email lists, also known as reflectors. The larger list is called tvfmdx and has around 185 subscribers, most of them WTFDA members. The email lists are for posting messages. When one person posts a message to [tvfmdx@wtfda.info](mailto:tvfmdx@wtfda.info), the other subscribers on the list receive it. Doing this gets your message, whether a comment or a request or a DX alert, out to a great number of people with just one email.

There is a large amount of DTV news on the list, DTV equipment news and DX reports and much, much more. If you want to talk about DX-related topics with others, this is a great place.

There's a huge amount of good reading at the Forums and the WTFDA website, so take advantage of them!

WTFDA MEMBERSHIP AS OF APRIL 1, 2008

(FC): Flash-cut from analog to DTV on same channel.

Thanks to Robert Grant, Bill Hepburn, and Peter Baskind for information elsewhere in this column.

And in Meridian, Mississippi, yet another applicant is shot down in their attempt to get a permit to operate on channel 37.... at least that applicant was able to spell "Meridian" properly...

Yes, there are two channel 50 LPTVs licensed to Hobbs, New Mexico... One of them is actually a lot closer to Carlsbad and roughly 60-80km from the other one.

And yes, the digital power for WNYI-DT in New York is fifteen watts. At one entire meter (about 3 feet) above average terrain. I think I know the geographic coordinates of the Ithaca, New York cable company!

The applications of YES TV and HDTV Networks for Canada's first DTV-only stations have been denied. YES TV proposed only one station, in Toronto. The CRTC felt YES's business plan was not adequately researched.

HDTV Networks proposed eight, including Toronto, Halifax, Montreal, Ottawa, Winnipeg, Edmonton, Calgary, and Vancouver.

The applicant wished to be guaranteed placement on both digital and analog cable, arguing that the demise of analog TV in the USA would open up channels that could be used for that purpose. The CRTC felt guaranteeing analog cable coverage for a station with only a digital over-the-air signal would set a dangerous precedent. They then ruled that the applicant's business plan might not be viable without analog cable carriage. They were also concerned with the applicant's plan to air only two hours a week of local programming on their stations.

The applications:

Vancouver: ch. 18/300w

Calgary: ch. 25/10kw

Edmonton: ch. 50/100kw

Winnipeg: ch. 40/15kw

Toronto: ch. 21/9kw; ch. 26/160w

Ottawa: ch. 50/9.5kw; ch. 54/180kw; ch. 62/9.9kw

Montreal: ch. 15/600w

Halifax: ch. 14/15kw

In Toronto and Ottawa, it's not explained which application goes with which applicant. (nor why there are three applications in Ottawa. One probably is a test station operated by the Canadian Research Council.)

Also in Canada, the two low-power stations in Saskatchewan were deleted as their coverage areas are already served by relayers CBKST-3 & CBKST-11.

Good DX!

# LOW BAND TV GRID SQUARES

ROB GRANT

I just prepared this list of the grid squares for the transmitter sites of all of the lowband TV stations in the full-license FCC database (a slightly old copy from May, 2006, but few of these have changed their TL's at all, let alone into another grid).

I can't guarantee it is free of errors, and many of the call signs of Canadian stations have been sold to the CBC/SRC and changed calls.

I also tried whenever possible to change the state where the transmitter is not in the same state as the city of license, but I was pressed for time and may have missed a few. 73, Robert Grant, N8NU

## DELAHUNT ANNOUNCES \$110,000 DIGITAL CONVERSION GRANT FOR WOMR RADIO

WASHINGTON, DC – Today, Congressman Bill Delahunt announced that WOMR radio in Provincetown, MA will receive a \$110,000 digital conversation grant from the Corporation of Public Broadcasting (CPB).

“I am pleased to announce that WOMR will receive these federal funds which are designed to help both public television and radio stations to convert from analog to digital broadcasting,” Delahunt said. “This technology will allow WOMR to significantly enhance the quality and scope of the services they provide to Provincetown and the Lower Cape while providing richer quality sound.”

These funds are part of over \$5 million that the Corporation for Public Broadcasting (CPB) is releasing in digital conversion grants to local public radio stations across the country. These grants are part of the nearly \$270 million in funding that Congress has provided to CPB since 2001.

Dave Myers, the Executive Director of WOMR said, “WOMR is honored that the Corporation for Public Broadcasting has chosen to award our station with a grant to help us convert our main transmitter from analog to digital/analog, using “In-Band On-Channel,” (or “IBOC”) technology, also known as “HD Radio.” The grant is for up to \$110,000, to help cover an estimated project cost of \$131,500. This conversion will help us improve the noncommercial broadcast services we provide to our listening community here on the Cape in a number of important ways.”

Specifically the overall benefit of the conversation will allow WOMR to:

Improve the audio quality of their broadcast signal so that it is comparable to that of a CD.

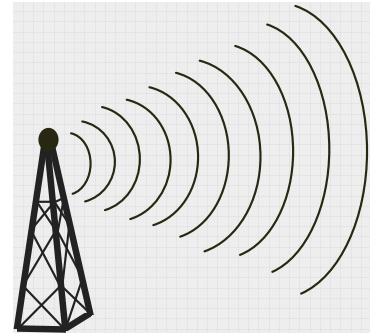

Have the option to “multicast” on up to two additional digital FM bands. In simple terms, this means that a listener could choose to listen to either WOMR’s primary FM broadcast on a regular radio, or, using a digital radio, could listen to completely different programming on “WOMR-2” or “WOMR-3.” This programming could take the form of additional classical or news content, or the re-airing of popular shows from the primary FM broadcast at different times of day or on alternate days of the week.

Provide digital listeners with additional information in text form through the “program associated data” function. Those listening to WOMR on a digital radio will see a constant scroll of information on the radio’s screen just below the frequency indicator. This can include the name of the program currently on the air, information on the music (song title, artist, album, genre, etc.), upcoming program and event information, public service announcements for local nonprofits, amber alerts, emergency information, and station news.

WOMR is a nonprofit, non-commercial educational radio station in Provincetown, Massachusetts that first went on the air on March 21st 1982. Since 1995 it has been operating at 92.1 FM. For more information, visit <http://www.womr.org/>.

## WTFDA ON MARS!

More Captions  
Rob Grant Adds His

- 1) New QTH, No homeowners association, but the commute's a b----.
- 2) Those Arcturan stations NEVER ID on the hour!
- 3) Can't do much on channels 5 or 6, too much interference from that old Viking Lander.
- 4) Ok, Mike, fine signal from FN31, the grid here is RR769,829.
- 5) Great meteor shower last weekend, took out half the backyard!
- 6) Thought I IDed Saturn, but it was an ad for a car from Earth.
- 7) Bob Cooper's old Rio channel 2 record's gonna be toast!
- 8) KCWX again!?! Puhhh-leeese!

## The Editor's Note

Opening day in baseball recently passed, and in some areas opening day for DX season has arrived in the form of unusual early-season coastal tropo in the Northeast and Gulf tropo in the South, while things have remained quiet in the Midwest and Great Lakes. We should also be just days away from the first widespread reports of TV E-Skip.

My expert prognostication for the upcoming Es season? (Laugh) With it being the last hurrah for analog TV, I think the atmosphere might just have something special in store for us. Wishful thinking I know, but we shall see.

For now, a larger ETVDX this month, including a detailed report from Jim Pizzi on the DTV situation in Rochester. Enjoy!

**Robert Grant (N8NU)** 231 E Temperance Rd. Temperance, MI 48182

 (also noted WEWS-5, WILX-10, CFPL-10, WOSU-34, WLAJ-DT51, WLAJ-53, WFUM-DT52, CBLFT9-53, WILX-DT57 and CHWI60-60)

**Says Robert:** "Not much usually happens this time of year. A brief break from the wintry weather provided some welcome tropo, adding both stations and gridsquares for the year. Two curiosities were seeing WKBW-DT and WGRZ-DT, but not the usually easier WIVB-DT (perhaps because WADL-DT 39 was extremely strong) and seeing CBLN4-45 through WDIV-DT but getting no trace of the usually much easier CKNX-8."

**Says Jim:** "Got a chance to talk  
some engineers at my locals. Lou at  
WHAM said that they would be  
broadcasting digital on Channel 13  
after Feb. 09. Trying to get 30 kw.  
ERP, but was having problems with  
CRTC...couldn't elaborate. Greg at  
WHEC said their Channel 45 signal  
was 415 kw. but will be on Channel  
10 with digital at 5.8 kw. After Feb.  
09.

I told Greg that Lou was trying for 30  
kw. And he said that if Lou gets 30  
kw., so will they. I said that 5.8 kw.  
might not get a signal out of this  
county...he didn't seem concerned.  
Finally (I talked to) Ed at WXXI and  
they will stay on Channel 16 after  
Feb. 09, shutting down analog 21.  
Channel 16 has nearly 200 kw. Ed  
seemed to think that was a lot of  
ERP. I said they should try for more  
power, but he said people would  
have to go to cable, satellite, or get  
bigger outdoor antennas.

(Continued on next side...)

(Jim continued...)

"Eric for WUHF and WROC never  
returned my call, but I understand  
from talking to the others that they  
will stay on Channel 28 (WUHF-DT)  
and Channel 45 (WROC-DT) but  
don't know at what ERP.

So, there is a lack of concern about  
extra household sets and the  
potential lack of fringe (25 mile)  
reception. Rochester & Syracuse are  
very touchy with an indoor  
bowtie...even with signal amp (KT-  
100VG).

This may be an opportunity to  
experience late 1940s – early 1950s  
analog long haul, double-triple Es,  
TE, F2, who knows? Sun spot cycle  
is predicted to be intense. Hopefully  
some or all of us will see and hear  
the impossible...let's be prepared.

Best DX to all.  
Jim"

**Mike Bugaj** 69 Sherman Road, Enfield, CT  
06082 Equip: Insignia NS-DXA1 with a  
Winegard HD-9032 at just over 30' agl. Also a  
CM 7775 preamp.

4/19 Tr

1133 WNAC-DT 54 RI Providence

4/20 Tr

0923 WTEN-DT 26 NY Albany  
2140 WWOR-DT 38 NYC

4/22 WSBE-DT 21 RI Providence

All of these are new to my log and were  
received just after I raised up my UHF antenna  
to just over 30' and replaced the CM4228 with  
the Winegard yagi because of weight  
concerns. The Winegard is working out well.

WWOR-DT was seen through my Hartford  
LPTV, WHCT-38. I was not expecting this  
since I was just watching WWOR-DT on ch44-  
2, (the WNYW-DT channel). When WWOR  
popped up on ch38, I thought the Insignia box  
was acting up.

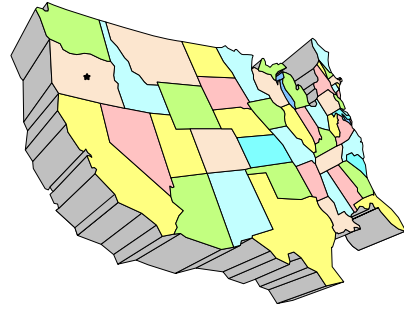

My DTV log stands at 48.

**beansdad@bendcable.com (541) 420-4704**

I've been doing a ton of traveling and haven't been quite the correspondent I should be. I apologize for poor communications now and I'm not sure it will be much better this Spring/Summer; I'm in Portland regularly for work and when home focused on family. I will produce a June column (deadline to me, May 22), but I will not be able to produce a July column – I'll resume in August.

On a recent trip to Wisconsin, I enjoyed watching some DTV/HDTV in both Minneapolis and Appleton. Not any DX per se, but I continue to add to my collection of DTV/HD screen captures. 73- Dave

## **Dennis Park Smith**

3605 San Remo Drive  
Santa Barbara, CA 93105-2523  
Telephone (805) 687-7803

This report is for March, 2008. There was a little tropospheric DX on only occasional days along the Southern California coastline, to San Diego/Tijuana, up to 200 mi/320 km. This type of tropo is inversion-layer ducting and around here it is mostly across ocean water. There is more of it in summer. It is the same stable condition that contributes to Los Angeles smog. Maybe sometime I will describe what one person here (no, not Don Voegele) figured out that causes our coastal DX. It is good for a laugh.

Mar 1 – 4 aft None (stable but cool, since Feb 29)  
Mar 4 eve – 12 Variably poor to fair; mostly poor (some warming)  
Mar 13 – 17 None (unsettled, windy)  
Mar 18 – 19 Variably very poor to poor  
Mar 20 None (wind forecast?)  
Mar 21 – 25 Poor to fair (25; peaked good mid-day)  
Mar 26 – 31 None (definitely windy, cooling)

On March 30, I got together locally once more with Don Voegele with my Accurian DTV box at his place with his Finco 5-ft dish antenna. Conditions were normal (no tropo), but with some effort, we aimed the antenna eastward (new direction) to Ventura/Oxnard and Los Angeles, for 9 more new DT stations, all across very hilly land terrain (beyond those seen, not all possible DTs were received by we weren't sure what to expect) btw apx 1800 & 2130 PDT. Approximate distances are uncertain for some of these. Our Santa Barbara DTV total is now at 22 stations.

Mar 30 presumably normal regular fringe, ATSC/digital TV, all California

**KBEH-DT** 24 Oxnard Spanish, some MTV3 50 mi

KJLA 57 Ventura "LATV" Span/Eng 50 mi?  
KLCS 58 Los Angeles (tentative) 90 mi  
KRCA 62 Riverside Spanish 150 mi  
KBEH 63 Oxnard Spanish, some MTV3 50 mi  
KHTV-LP 67 Inland Empire (tentative) 150 mi?

We had a great time DXing on these occasions. After 3 months here, Don left Santa Barbara on April 1 to return to Washington State.

Old business: I noted Channel 55 MediaFLO as on "since at least Nov 2007". On remembering, it has been longer, since mid-Summer 2007.

Feb 15 in Wasco: KBID-LP 31 is new tentative (apx 90 mi), so far only offset CCI under closer KBTF-CA 31 Bakersfield (35 or 45 mi). It is fairly new on the aid and is most likely the signal noted.

Best of DX to all, Dennis

Note 1: I have permanently lost my very first DTV DX notes. They were all the common stuff but, nevertheless, I don't seem able to re-create my first easy loggings by date, with a few exceptions. (I did some summarizing in November 2005 VUD, and mentioned several specific DTV's in so doing.) Therefore, in a few cases where I have ascertained reloggings at a later date, I've included them in my notes here. That will reduce the number of DTV loggings forever destined to be "undated" though, of course, that means some loggings aren't in true sequence.

# Small Stations Sue Over Digital TV Plan

March 26, 2008 8:40 PM ET

**AP** Associated Press

WASHINGTON (AP) - The low-power television industry is facing a "death sentence" because of a flaw in the government's plan to force broadcasters to shift to digital broadcasting and has asked a federal judge for a reprieve.

The Community Broadcasters Association, which represents owners of small television stations, wants the Federal Communications Commission to ban all digital set top converter boxes that are not equipped to receive an analog signal, a request that has the potential to derail the biggest broadcasting transition since color television.

As of Feb. 18, 2009, all full-power television stations in the U.S. are required to stop broadcasting an analog signal. Anyone who gets programming through an antenna and does not have a newer-model digital TV set will need to buy a box that converts the digital signal to analog. The government is providing two \$40 coupons per household that can be used to buy these boxes.

The problem facing the 2,600 low-power television stations represented by the association is that they are not subject to the deadline. Most of the converter boxes now on sale will actually block the low-power analog signal from those stations, while the full-power digital signal will display normally.

The association, in a petition filed with the U.S. Court of Appeals for the District of Columbia Circuit on Wednesday, asked the FCC to "prevent the marketing and distribution" of the boxes.

The association cited a 1962 law called the All Channel Receiver Act which was adopted during the early years of UHF broadcasting. The law requires that devices that receive television signals be capable of picking up "all frequencies allocated by the commission to television broadcasting."

It is not certain how many viewers may be affected. The association characterizes its viewers as rural, underserved urban, elderly and non-English speaking.

In addition to low-power stations, about 4,300 translator stations, which boost signals from full-power stations and relay them to rural areas, also are exempt from the 2009 deadline.

Nothing in the law prevents low-power stations from converting to digital, but for most stations,

the cost is prohibitive, according to the association.

Ronald Bruno, president of the association, said converter boxes currently for sale will decrease viewership for low-power stations.

"Every time a person gets a coupon, buys a converter box and plugs it in, we lose that viewer," he said.

The petition asks the court to order the FCC to act immediately to ban the boxes and says a delay would be disastrous.

"The dire consequences for such stations -- effectively a death sentence -- will be irreparable through any available administrative or judicial remedy," it reads.

The FCC had no comment on the court action.

The converter box program is overseen by the National Telecommunications and Information Administration. Agency spokesman Bart Forbes said the law ordering the transition says boxes can "only receive digital signals" and the NTIA specifications on box design are consistent with the law.

Gary Shapiro, president and CEO of the Consumer Electronics Association, accused the broadcast association of "trying an 11th-hour litigation strategy to freeze the entire nation in analog."

As of March 25, the NTIA reported it has received requests for 8.5 million coupons from 4.5 million households.

Six of the converter boxes that have been approved for sale by the NTIA allow for an analog "pass-through" feature. According to the NTIA, they are the Philco TB150HH9, the Philco TB100HH9, the ECHOSTAR TR-40, the Magnavox TB-100MG9, the Digital Stream DX8700 and the Digital Stream DSP7700T.

Such a feature would allow televisions to receive an analog signal, but Bruno says such boxes "do not create an acceptable solution for the over-the-air viewer." To watch analog channels, viewers would have to turn off the digital converter box and use a separate remote control.

## ZENITH - INSIGNIA - RCA STB NEWS

Danny (and others tracking this information),

According to LG Electronics, their product number for the sixth generation chipset is LGDT1111. There are several persons on the various dtv forums claiming that the Zenith/Insignia model indeed has the LGDT1111, but I have not been able to **\*confirm\*** this in OFFICIAL documents. And they are saying that there are at least a half dozen models that have/will have this particular chipset.

IF someone can confirm that the Zenith/Insignia has the LGDT1111 chipset in them, then we will know for sure if its a fifth or sixth generation chipset.

BTW, electronics industry analysts are now saying there is a T1 chipset which is supposed to be even better than the LGDT1111, due out in other DTV stb models this summer or late summer. It even features a full function EPG (electronic program guide), which provides several hours worth of program content listings, versus the LGDT1111's "Now and Next" EPG. FYI.....

---

Jim Thomas, wdx0fbu

Mine is LGDT1111-1D on the large chip. My SN is 712SHAR046423 Dec 2007. V6.

"Does anyone have a comment on the Radio Shack Digitalstream DTX9900?I am considering buying the Insignia and the Digitalstream.The other day,I purchased the RCA DTA 800 from the local WALMART. What a piece of junk. It seems to only allow you to autoscans for the channels. It does not appear that you can delete the channels once they have been entered nor can you enter channels manually."

Marv Shults

---

I have not tried the RCA box and I've read very little about it, or them. Actually, I've read that there are two different models, with very minor differences.

Regarding your comments relating to the Insignia (Zenith) box, I have a feeling it is going to be quite good with Es. In capturing PSIP, the Insignia is somewhat like the Accurian, but it's also MUCH better, too. With the Accurian, if you missed the PSIP info or didn't have time to hit the "Add Channel" button, you lost the PSIP info. That is not the case with the Insignia (Zenith).

You'll be able to park the Insignia on, let's say, RF channel 2 while you are at work. When you get home from work, you hit the "DISPLAY" button and it reads "DTV 40-1." It appears that sometime during the day the box decoded WTWC-DT-2, but you want to see the PSIP info. As long as the box was not turned off or the channel was not changed on the unit from the time the box actually decoded WTWC-DT, the box has retained the PSIP info. Hit the "MENU" button, then hit the "SETUP" button, scroll to "Manual Tuning" and then hit the ">" button to highlight the RF channel number on the screen, and then when you hit the center button (multi-purpose) button which will "Add the channel" the screen will highlight the call letters. As a reminder, just make sure the unit is not set to automatically shut off after 2, 4, etc. hours or the PSIP info will be lost.

I hope this makes sense. Once you do it, it's quite simple and you won't lose the call letters for verifying your reception while away from home or during those necessary bathroom breaks right in the middle of some hot Es or tropo.

Steve Rich

## WTFDA-APPROVED SET TOP BOXES

Of course, there is no such thing as a WTFDA-approved set top box. Remember that any reviews of these boxes you read are the reviews of individual WTFDA members and should not be interpreted as being approved by the club. The BOD is in no position to approve anything except raises for ourselves, and we haven't even done that!

Just because someone writes a glowing review of a product does not necessarily mean that the product will suit your particular

needs. For some of us, analog pass-through is not a big deal at all, but for some of you, it's a very big thing and something you want to look for.

Just remember to read the reviews for what they are and, in the end, make your own judgment what to purchase. And remember that there are many boxes that nobody in the club has purchased or checked out. Pick up one of them, check it out and tell us what you think. And if it's terrible, get your money back.

### Letters, We Get Letters...

In the past couple of columns, I have been discussing getting a starter station together for 6 meter VHF. I have gotten a couple of interesting responses.

First, Kark Zuk, N2KZ in New Jersey, took issue with one of my comments in last month's "how-to" column. I had suggested that 6 meter newbies refrain from making copious CQ calls on a dead band. Karl writes:

Listening is a wonderful thing. I sit on 50.125 and wait forever too. BUT...I also call my brains out endlessly. I have logged some exceptional skip this way. My best catches have been all alone when the band was "dead." If no one calls, we are all standing in the dark waiting for beacons to come in.

CALL ANYWAY! OFTEN! I'm sitting on 50.098 or 50.125 at any given time if I am home. Waiting and waiting and waiting -and - calling and calling and calling. I p\*&% off a lot of the big boys who miss because of the very sporadic nature of six. Be there or be L 7.

Another great tactic is to listen to someone holding court. When they say they are about to QSY, run to that frequency and call them before they get there. You'll be the first one they hear. You'll log them every time!

I agree totally. But, again, my suggestion was for those new to the band. Calling CQ without a response can be frustrating, especially to a beginner. I don't want someone to try the band, find nothing, and never return. So, let me be a bit more clear – *if you're new to 6 meters*, it might be a good idea to listen first, then try to make contacts. But, above all, stick with it; contacts will come.

Interestingly, Karl's callsign seemed very familiar. After a quick look-up, I realized why. I worked Karl quite a while ago, and received his QSL card:

I liked it so much, it became the inspiration for my card, when my then-four-year-old handed me a picture a few years back. Thanks, Karl!

*Another member* asked a question about 2 meters – the 144 MHz band. He was wondering about what was needed and what to expect in setting up a basic 2m FM station for general chat and repeater work. I have less to add here than I do on 6 meter work. 2m FM is quite a bit less complicated. All that is needed is a basic 2m FM radio, some feedline, and an antenna.

For basic 2m stuff, I really don't advise buying used. There really isn't much of a point. From what I have seen on sites like eBay, used prices aren't low enough to justify the risk and annoyances of buying used. If you buy new, you know who you are dealing with, and get a warranty, too.

By my experience, 2 meter monobanders by either of the “Big Three” manufacturers (Yaesu, Kenwood, and Icom) are all acceptable. Find one you like at a good price, and you should be fine. Expect to pay something below \$200, depending on what you bought and from whom. The cheapest radio I found in a quick look was the Yaesu 2800, available for \$124. Not too bad, at all, especially considering the weak dollar.

As far as antennas as concerned, again, one doesn't need much for just chatting around town. For the most part, if you have a robust local repeater, a very simple antenna and even just 5 Watts will often suffice. My attic is full of antennas, including a couple of high-end ground planes. But, often, I am using my simple dipole. It works great on my local repeater and, you can't beat the price.

So, if chatting with the locals on 2m excites you, jump on in. Getting on is cheap, and not much training, if any, is needed. 2 meters is not much above CB with manners. But, I enjoy it, and many others do, too

\* \* \*

So, as we stare down the beginning of a new sporadic-E Season, I am wondering if we have any new hams out there, ready for the VHF bands. If so, let us all know.

Pictures of your station, QSLs, or even antennas are always welcome!
