THE WORLDWIDE TV-FM DX ASSOCIATION

Serving the UHF-VHF Enthusiast

THE VHF-UHF DIGEST IS THE OFFICIAL PUBLICATION OF THE WORLDWIDE TV-FM DX ASSOCIATION DEDICATED TO THE OBSERVATION AND STUDY OF THE PROPAGATION OF LONG DISTANCE TELEVISION AND FM BROADCASTING SIGNALS AT VHF AND UHF. WTFDA IS GOVERNED BY A BOARD OF DIRECTORS: DOUG SMITH, GREG CONIGLIO, BRUCE HALL, KEITH MCGINNIS AND MIKE BUGAJ.

Editor and publisher: **Mike Bugaj**

Treasurer: **Keith McGinnis** wtfda.org Webmaster: **Tim McVey**

wtfda.info Site Administrator: **Chris Cervantez**

Editorial Staff: **Jeff Kruszka, Keith McGinnis,**

Fred Nordquist, Nick Langan, Doug Smith,

Peter Baskind, Bill Hale and John Zondlo,

Our website: www.wtfda.org; Our forums: www.wtfda.info

APRIL 2010

Finally! For those of you online with an email address, we now offer a quick, convenient and secure way to join or renew your membership in the WTFDA from our page at:

<http://www.wtfda.org/join.html>

You can now renew either paper VUD membership or your online eVUD membership at one convenient stop. Use the link above to either join the WTFDA or renew your membership in North America's only TV and DX organization.

IT HIT A NERVE!

Over the past few days I've received links from members concerned about the FCC's intention to drop channels 46-51 from OTA broadcasting and if I have the space this month I'll print one or two articles about it from the links I've received.

The biggest kick-in-the-butt to TV DXers comes from former FCC chairman Reed Hundt who admitted recently that between 1994 and 1997 he made the conscious decision to promote the internet over broadcast television. The broadcast plan published on March 17 is the culmination of his plan to throw OTA broadcasting into the trash heap and concentrate on broadband.

So it should be no surprise that ch46-51 are about to be taken away. More spectrum will be surely taken away later on. Perhaps OTA television will one day be history.

The future doesn't look too great for OTA television viewers and it doesn't look so sparkling for TV DXers either.

MEMBERS AND MORE

Moving on to a more pleasant subject, we welcome two new WTFDA members: **Stewart Douglas** (ON) and **Anthony Costa** (VA). Welcome to the WTFDA guys!

Renewals were received during the period of 2/13 through 3/13 from **Juan Gualda** (FL), **Harry Hayes** (PA), **John Cereghin** (DE), **Nathaniel Ely** (WI), **Jeff Wolf** (MD), **Steve Naetzker** (AZ), **Robert Grant** (MI), **Carlton Howington** (FL), **William Higgs** (CA), **Frank Drobny** (CA), **Allan Dunn** (MA), **David Cox** (AL), **David Nieman** (PA) who rejoined, **Robert Steadman** (WI), **Richard Porter** (IL), **Bill Dvorak** (WI) (Hi Bill), **Gerard Hart** (NY), **Frank Merrill** (IL) and **Peter Taylor** (WA). Thank you all for your support of the club!

Here's a little bit about this month's cover photo from **Fritze**: "I am sending a photo taken of the KXSA 103.1 Dermott AR broadcast tower at Collins in rural Drew County AR on February 27, 2010 at sunrise. The view is facing east with partly cloudy skies."

Those of you reading your eVUD will probably appreciate the photo and its colors. If you are reading the paper VUD you probably won't.

Stephen McGreevy writes "I wanted to say thanks for printing my "DXing on the Baltic Sea" article in the February 2010 VUD!

I also want to call to the attention of the WTFDA members that I have posted 5 audio files (MP3) on my website of FM airchecks and some MW DX recorded in Saint Petersburg, Russia, 15-16 September, 2009. Total time of all of the MP3 files is over 27 minutes in duration.

The URL is:

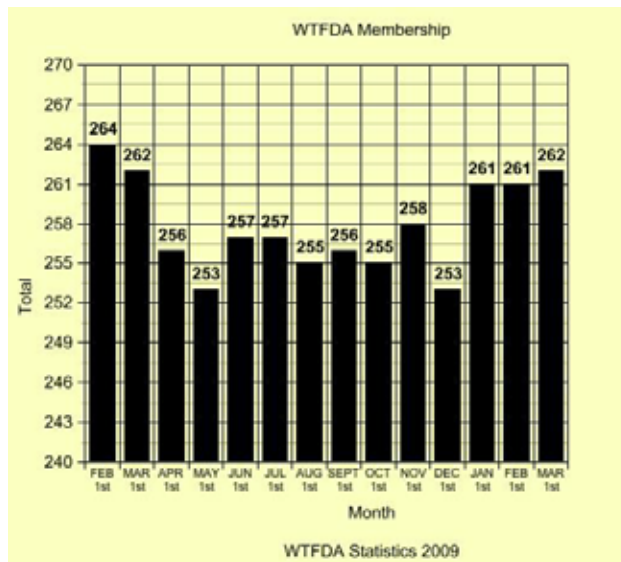

<http://www.auroralchorus.com/wr3gx.htm>

BACK ISSUES

Just thought I'd mention that I have back issues of the paper VUD here going back to September 2009. Amounts vary with ten being the maximum on some issues and maybe one or two of some others.

Here's a reminder that every issue since January 1981 is stored at the WTFDA website. All you need to do is get a userid and password and you can go there and download whatever you want. If you need a hardcopy, print it out on your own printer. Your copy will most likely look better than the original paper VUD.

NOT BAD FOR MARCH

NRC/WTFDA CONVENTION 2010

Convention time will be here before you know it. We'll have more information on the location, hotel, rates, etc next month. See you all then!

Thanks to Bill Draeb, Bob Seaman, and Lewis Kruger for information appearing elsewhere in this month's issue.

The DTV transition has been partially delayed in Canada. The CRTC has backtracked on requiring all stations to convert to digital by next August. Stations in "mandatory markets" are still required to convert, but stations in smaller markets will be allowed to continue in analog. No deadline has been set for these stations to convert.

Small-market stations operating above channel 51, or whose continued analog operation would preclude digital conversion elsewhere, would be required to find new channels for their continuing analog operation.

"Mandatory Markets" are the 13 provincial & territorial capitals; markets with a population of more than 300,000; and markets with more than one local station. They are:

B.C.: Vancouver & Victoria

Alberta: Calgary, Edmonton, Lloydminster, and Lethbridge

Saskatchewan: Regina & Saskatoon

Manitoba: Winnipeg

Ontario: Toronto, London, Windsor, Kitchener, Thunder Bay, Barrie, and Hamilton

Quebec: Montreal, Quebec, Trois-Rivieres, Sherbrooke, Riviere-du-Loup, Saguenay, and Rouyn/Noranda/Val d'Or

New Brunswick: Saint John, Moncton, and Fredericton

Nova Scotia: Halifax

Prince Edward Island: Charlottetown

Newfoundland & Labrador: St. John's

Yukon: Whitehorse

N.W.T.: Yellowknife

Nunavut: Iqaluit

National Capital Region (Ottawa-Gatineau)

The CRTC is also considering a "consumer subsidy program", possibly similar to the coupon program in the U.S.. They do believe about 40,000 viewers may lose OTA signals altogether, and are considering subsidizing the purchase of satellite equipment for these viewers. Canadian satellite operators have offered to provide free service (but not free equipment) for a local-channels-only service; the CRTC seems interested in taking them up on this offer.

A consumer-education program, also similar to that undertaken in the U.S. Last year, is also being considered.

Finally, a test-market program is under consideration. In the U.S., Wilmington, North Carolina converted early – in Canada, Winnipeg is being considered as a test market.

WIAV-LP Washington will be using the old WRC-TV analog antenna.

The FCC has decided to go ahead and allot channel 4 to Atlantic City, New Jersey. Three firms filed comments in support of the move. One claimed existing stations don't adequately serve Atlantic City. Another promised to participate in the auction for the channel, and promptly build the station if they win.

The third supporting firm... was PMCM. Yes, the same firm that proposes to move two

Western stations to New Jersey and Delaware. PMCM says they support NJ-based television, as long as it doesn't preclude the move of their KVVN-3 from Ely, Nevada to a NYC suburb.

(While that proposed move has been denied by the FCC, it's still in litigation. The FCC says the channel 4 allotment at Atlantic City is not mutually exclusive, from an engineering standpoint, with PMCM's proposal.)

LPTV station W32DF Hempstead, NY has been fined \$15,200. The station was found to be operating with an antenna different from the one specified in their construction permit, a directional antenna favoring the wrong direction.

The station was also found to have no EAS equipment, and the antenna was found installed at a site 700 feet from the authorized location.

It seems the station had ordered the antenna for use by their authorized digital station W20CQ-D, at the same site. The W20CQ directional pattern, however, is different from the analog W32DF pattern.

The \$15,200 fine is a \$3,800 reduction from the originally-proposed \$19,000 figure. The Commission was unable to find any other violations on the licensee's record. They generally take a licensee's past record of compliance into account when fixing the amount of a forfeiture.

A Pittsburgh LPTV station has also been fined, to the amount of \$3,200. WIIC-LP was found to have operated on channel 32 since April 2007. Their license calls for the station to operate on channel 29.....

The station has an application on file to move to channel 32, but the FCC has not acted on that application.

This \$3,200 figure also represents a reduction from the originally-proposed fine, of \$4,000. And again, it reflects the otherwise-clean record of WIIC-LP's licensee. The licensee also claimed inability to pay; however, he (the station is a sole proprietorship) failed to provide requested documentation of gross income, necessary to establish that ability.

KWSD-36 previously held a permit for 400kw. They had it modified to specify 36.9kw before going on the air; they now wish to reauthorize 400kw.

KAGN-LP Crowley, Louisiana has been

granted a permit to move from analog channel 31 to digital channel 37. 74.702(2) would seem to prohibit use of channel 37 by LPTV stations. (and there's another regulation which prohibits full-power stations from using this channel. It's reserved for radio astronomy.)

The FCC has granted two experimental applications for "fixed whitespace devices" to operate in TV channels 7-13 and 14-51. The call letters WF2XFA go to Spectrum Bridge, Inc. for tests in Lake Mary, Florida. WF2XGC goes to TV Band Service, LLC for Wilmington, North Carolina. Strangely enough, WF2XGC was granted permission to use one additional channel -- maybe we can call it "channel 6.9"? -- 168-174MHz.

A large number of permits have been granted for new LPTV stations:

Northern Mariana Islands (Saipan):

Garapan 29, 31, 33, 34, 39, 42, 44

CA	Buttonwillow	89.7	K209CW	License cancelled; call deleted
CA	Porterville	89.5	K208EI	License cancelled; call deleted
CA	Sacramento	91.5	KYDS	Fined \$1500 for failure to file for renewal in a timely manner
CA	Sacramento	97.7	KDEE-LP	Application for move to 95.5 dismissed
CA	Tulare	88.1	K201FB	License cancelled; call deleted
CO	Cortez, etc	103.5	K278AD	License renewed after being cancelled
CO	Pagosa Springs	92.5	K223AF	License renewed after being cancelled
ID	Boise	105.	KJOT	Fined \$4000 for broadcasting information about a contest without fully and accurately disclosing all terms of the promotion
ID	Kamiah	90.9	K215AB	Fined \$500 for failure to file for renewal in a timely manner
ID	Orofino	90.5	K213BN	Fined \$500 for failure to file for renewal in a timely manner
IN	Pendleton	91.7	WEEM-FM	Is alive and well, reversing an erroneous item from last month's column. Thanks to <u>Ralph Strobel</u> of nearby Muncie, who reports that although there are rumors the station <u>may</u> be shut down, it is on the air 24 hours-a-day. The licensee is the South Madison Community School.
IA	Des Moines	99.1	KFMG-LP	Employee and Family Resources is donating the station to The Des Moines Community Radio Foundation, which consists partly of station staffers. EFR took KFMG-LP off the air in January for financial reasons.
ME	Camden	90.5	WMEP	Is off the air due to storm damage
MI	Rose Township	90.9	WMSD	Fined \$1500 for failure to file for renewal in a timely manner
MN	Rochester	103.9	K280EL	Is silent; apparently supplanted by KDCZ-103.9 Rochester
MS	Meridian	91.7	WSQH	Application to move to Decatur dismissed
MT	Four Corners	90.3	KLSN	CP for a new station dismissed; call deleted (requested by applicant)
MT	Polson	107.9	KMDM-LP	Is silent
NE	Sidney	93.5	K228DI	Fined \$250 for failure to file for renewal in a timely manner
PA	Scranton	89.9	WVIA-FM	Is back on after a fire destroyed its transmitter, but is operating at approximately 75% (5.55 kW) of its licensed level.
SC	Ladsen	91.5	WKCL	Fined \$1500 for failure to file for renewal in a timely manner
SD	Sioux Falls	100.1	K261CI	License cancelled; call deleted per licensee's request
TN	Cookeville	88.5	WTTU	Fined \$1500 for failure to file for renewal in a timely manner
TN	Spencer	90.1	WZYZ	Fined \$1500 for failure to file for renewal in a timely manner
UT	Escalante	95.3	K237AD	Fined \$4000 for failure to file for renewal and subsequent operation

+++++

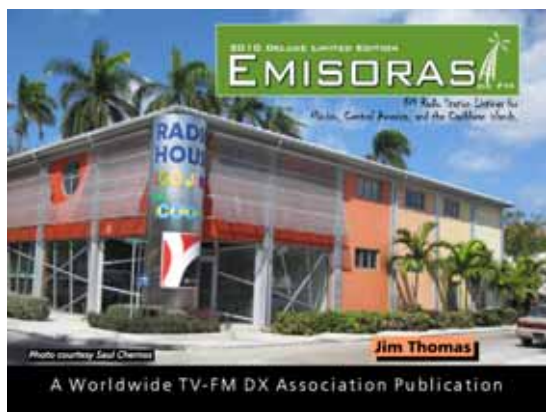

NEWS ITEM: Regent Communications has filed for chapter 11 bankruptcy reorganization. The company announced on March 1 it's reached a restructuring agreement with its lenders that will eliminate about \$87 million in debt and said the reorganization would have no effect on day-to-day operations. The Cincinnati-based company owns 62 radio stations in 13 markets nationwide.

NEWS ITEM: The first HD Radio portables to include either analog or digital AM reception are planned for release this year. Two working Sangean prototypes were in iBiquity's booth at a recent Consumer Electronics Show. In June Sangean plans to release the DT-600 HD personal receiver that supports analog AM along with FM analog and HD Radio reception. The pocket-size unit features a built-in speaker, a lithium-ion rechargeable battery, 20 presets (10 each for FM and AM) and a sleep timer. The radio is multicast-capable and supports program-associated data services. HD Radio options include emergency alert and iTunes tagging via a USB port. In October, it plans to release the DT-800 HD, which would be the first portable to support both AM- and FM-band HD Radio reception. The pocket-size radio includes the functions and features of the DT-600 HD. Prices have not been announced. Up until now, manufacturers have resisted including analog or digital AM in HD Radio portables, citing the difficulty and expense of getting good reception with a small antenna. It appears this problem may have been solved, if manufacturers are actually beginning to include AM in their portable HD Radio devices. The -600 uses an ear bud cable as an antenna, while the -800 uses that, plus a telescoping monopole.

NEWS ITEM: Followers of shortwave broadcasting know well the publication "Passport to World Band Radio." Larry Magne's labor of love that stretched two and a half decades was the bible of shortwave broadcasting. The first edition appeared in 1984 (then known as "Radio Database International") and at its peak it sold 80,000 copies in one year. Its last issue was the 25th anniversary 2009 edition. Now the Web site too is signing off — a victim of seismic changes rattling the broadcast industry. Magne wrote in a message at his Web site: "World-band radio gained vigor during the buildup to World War II, and of course during the war. After that, the Cold War with its ideological bent kept the field thriving. "But once the Berlin Wall came down, questions arose as to why these government broadcasts were taking place in the absence of any major conflict. So, some reinvented themselves, while many phased down or terminated their shortwave operations. "Add to that Sony's near-downfall, the growth of the Internet, and even the possible fading away of print publications — and it's sadly evident that the time has come to shutter Passport's declining operation." [Here's a publication I'll miss - Ed.]

NEWS ITEM: Revenue? The news format has been good to Bonneville and CBS. In the list of the top 10 earning U.S. radio stations for 2009, BIA/Kelsey reports that three of the top four air news formats; six of the top 10 have some combo of news and talk. The top earning station again was KIIS(FM), the Clear Channel CHR giant in L.A., which brought in an estimated \$55 million, according to BIA/Kelsey. But at number 2 was Bonneville's news station WTOP(FM) Washington at \$51 million, up from No. 6 last year (its accomplishment even more notable given that WTOP is the only station in this list not located in one of the three biggest markets; DC is Market 9). In third place came news station WCBS(AM) in New York at \$43.6 million, and fourth was its sister CBS station, news formatted WINS(AM) at \$42.9 million. Fifth was CBS alternative station KROQ(FM) at \$42.2 million. Rounding out the top 10 are Clear Channel's "lite AC" station WLTW(FM) in New York, Clear Channel's news/talk outlet KFI(AM) in L.A., CBS news station WBBM(AM) in Chicago, Clear Channel's CHR station WHTZ(FM) in New York and Tribune's news/talk/sports outlet WGN(AM) in Chicago. Last year, the top five were KIIS, KROQ, KFI, WLTW and WINS.

++++

The Editor's Note

March is perennially one of the slowest months for DX on the calendar, but this past one did have some isolated E-Skip activity, including on the 22nd and 23rd when paths with MUF into FM were reported from Texas into Nevada and California. Let's hope it's a good sign for the upcoming E-Skip season! Meanwhile, the always reliable Gulf of Mexico tropo pipeline was starting to kick into gear by the end of the month, with reports of 1,000+ mi. paths from Texas to Florida surfacing. Conditions should only improve from here on out.

Dennis Park Smith

Times 24-hour PDT

This report is for February 2010. Only tiny bits of tropo were noted at my & Don Voegele's places, along So-Calif coast to San Diego/Tijuana up to 200 mi / 320 km. Late in month, what tropo there was, did bounce back quicker between apparently el nino-influenced rains.

Jan 28-Feb 1	Very poor (calm, cool)
Feb 2-11	None (unsettled, rainy)
Feb 11-14	<i>Out of town – WASCO</i>
Feb 14-18	Var. poor-fair (warming)
Feb 19-22	None (unset., a little rain)
Feb 23	Poor+ (a clear calm day)
Feb 24-25	None (unsettled, rain)
Feb 26	Poor+ (a clear calm day)
Feb 27-28	None (more rain)

There was no Wasco DX, except this.

Britain's Clandestine Nazi Television Surveillance

BOB COOPER

1942: British investigators on the South Coast have discovered “unintelligible radio signals” apparently originating from deep inside France; Paris as it would turn out. Additional research reveals the German military have resurrected an experimental French television transmitter operating from atop the Eiffel Tower. What happened next immediately became ‘Top Secret’ as teams of intelligence professionals pored through up to seven hours daily of internal Nazi television broadcasts unwittingly ‘giving the war away’ to the Allied Forces.

During December 1938 Germany's Reich Minister of Propaganda, Dr. Joseph Goebbels, inspects the television production studios of Fernsehsender Berlin following which he would not be convinced their pioneering work was important to his mandate from Herr Hitler. Moreover, his own image on the 12 inch studio monitor was, he would tell associates, “more appalling than enchanting.” Television, even in 1938, usually creates the visual impact of adding weight to a human on display; in Goebbels' case his wiry physique only seemed to lose stature and a deformed right leg clubfoot made his posture uneven when moving. There, perhaps because of a misadjusted studio monitor, the future of German television began an immediate slide towards wartime obscurity. As the world was discovering, Goebbels ‘had a way with words.’

It had once been a promising initiative, briefly important, building to a crescendo of popular acclaim during the 1936 Berlin-hosted Olympiad XI games. Telefunken, in a rush to meet the August 1 start date, created an estimated 600 ‘Volksvision’ receivers with perhaps 500 installed in hastily completed public viewing chambers; German propagandists proudly advised the world, “More than 160,000 people viewed the [16 day] events on Fernsehsender-Paul-Nipkow-Berlin and Hamburg.” While some might dispute the claimed viewer numbers, this was without question the very first Olympics to be shown on ‘live television.’

Goebbels probably made the correct decision when electing to disfavour television and concentrate on radio. Virtually everyone possessed a radio; it was flexible and instantly available to his office whenever a message was deemed appropriate. All categories of broadcasting and the print media fell within Goebbels' portfolio and after the Olympiad XI he was simply not impressed with television. German technology had, in 1936, proven its world-class superiority and lacking the resolve to create millions of receivers and hundreds of transmitters, a self-critical analysis of his tube-image would temporarily seal future television's fate. This left the briefly-important fledgling technology without direction or a plan; basically, the engineers, technicians and program creators were left alone to ‘play’ with the new medium absent top-level direction or involvement. In July 1939, anxious to reclaim their 1936 level of importance, Fernsehsender management presented a plan to Hitler's minders urging 10,000 television receivers ‘for the Christmas market;’ their timing was atrocious. On 1 September, Germany and Russia joined forces for the invasion of Poland; World War Two was now off and running and one side effect would be German television reinventing itself.

To arrive at late 1942 when a British engineer made a startling discovery requires backtracking to revisit the events in sequence. Television actually had an aborted start in the late 1920s but the technology of this era was only capable of creating crude images and halting sound. It was simply not commercial: intriguing? Promising? Yes. The primary shortcoming was the hardware required to create a television image depended, until 1934, on a large electric motor that spun at high speed a segmented round disc perforated with rows of miniature pin holes. This in turn demanded powerful floodlights to illuminate the object being captured; motion plus picture depth beyond a single individual's head and shoulders was simply impossible. The transmission system was ‘mechanical’ meaning it lacked an electronic camera to capture the images. It will surprise many to learn that while 1928-1935 television was crude and seldom displayed on a screen larger than 3 inches in diameter, the British (BBC), Americans and Germans actually created regular broadcasts with newspaper promoted schedules in this era. Viewers for individual shows numbered in the low hundreds – if that high - and most of these would have been technophiles using home-built receivers, more interested in creating the image than in the content.

This all changed abruptly when, in 1934, a Russian immigrant named Vladimir Zworykin, employed by the New Jersey based Radio Corporation of America (RCA), announced an 'electronic TV camera' which immediately did away with spinning discs, electric motors, powerful floodlights and even made practical cameras which could be moved out of a studio into the bright out-of-doors to televise sporting events; including Olympiad XI. That Zworykin might not have done this without some assistance from places such as Hungary and Utah is fodder for another day's discussion.

The electronic camera made mass-scale television practical for the first time. After testing, the BBC would be the first to initiate regularly scheduled programming outside of a maverick Los Angeles experimental station pioneering transition from daily-mechanical to daily-electronic. The importance of 'all-electronic' was overpowering because now, for the first time, 'TV receiver standards' could be promulgated allowing real mass production of 'home receptors.'

The BBC's Alexandra Palace (London) transmitter operated to a published schedule from November 2, 1936 to September 1, 1939. It shut-down abruptly, without fanfare, in the middle of a Mickey Mouse cartoon ('Touchdown Mickey') because, on September 1, Great Britain and Germany had formally entered a state-of-war resulting from the invasion of Poland. You might ponder why this would affect television. The answer is semi-technical. The Alexandra Palace BBC transmitter was akin to having a bright (although invisible to human eye) 'search light' marking central London. As long as it remained functional, German bombers (and later V1 and V2 rockets) could simply 'follow the signal' into the heart of the city. Turning off BBC-TV was a defensive act to make it more difficult for German devices to locate Number 10 Downing Street.

On May 10, 1940 after intimidating and over running Poland and Czechoslovakia Hitler's Panzer divisions roared, without slowing down to sample the dairy products, through Netherlands and, end-skirting a hastily French re-enforced Maginot Line, arrived in Paris by mid-June. The French Government fell; hundreds of thousands of British and French soldiers were evacuated from Dunkirk as the coast line from Bordeaux to Brest to Hamburg fell firmly into German hands. Great Britain might be next.

When the Panzers raced with little opposition into Paris, Parisians fell into three camps: those who would relax and enjoy the occupation, those who would go underground to hassle the occupiers, and finally those who hardly looked up to notice tanks in the streets. Rene Barthelemy, French of course, and his Compagnie Francaise de Television went on doing what they did before the Germans arrived; he was creating what his mind imagined would become "the world's most advanced television system." The French government, before Germans arrived, had provided Rene with access to the 985 foot Eiffel Tower, a suitable location for his TV transmission antenna. This would, by 1942, become a key ingredient in the subsequent British discovery.

Largely ignored by Goebbels and his Propaganda Ministry, the several dozen Germans engaged in creating daily and weekly television programming for Fernsehsender-Paul-Nipkow serving Berlin was, by Christmas 1939, evolving a new reason to justify their existence. Following the onslaught into Poland and Czechoslovakia and the later Panzer dash through The Netherlands, Belgium and into Paris, German hospitals were quickly receiving war-damaged soldiers. The eastern war front into Russia, launched from the Baltic to the Black Sea in June 1941, would immediately overload the hospitals with amputees and bullet-infested blond-headed 'pure German' youth. Fernsehsender found itself thrust into the rehabilitation world; the Berlin transmitter 'left over' from the Olympiad XI, after 1938 largely engaged in gardening and social graces programming, was now instructed to "provide recreational entertainment and encouragement for the wounded." 500 'TV Parlour' receivers scattered throughout Berlin and Hamburg were reinstalled at 11 newly established hospital facilities and it was the task of the TV folk to create 'mind-diversion' programming on the 7 and 12 inch screens.

Francaise television facility; a new studio with seating for 250 and a control room supporting six

high-grade electronic cameras was backed up by a second complete with an in-stage swimming pool, and two smaller production studios of 30 by 15 feet. It was from this complex, connected to the 985 foot tall Eiffel Tower transmitting antenna, that a curious British engineer named George Kelsey would first decode the 'mysterious' transmissions.

Fernsehsender Paris 1943

441 Zeilen Technik,
Bildsender 46 MHz positive Modulation
mit Zeilensprungverfahren,
Tonsender 43.2 MHz SPECS: 30KW
Amplitudenmoduliert

Kelsey was acting on orders. His rank was 'Wing-Commander' but his pre-WW2 history included a stint with the BBC's inaugural television service. British Underground Intelligence already believed the Nazis were transmitting from Eiffel and early tests to determine if the distant signals were somehow arriving atop the 570 foot cliffs rising above 'The Channel' had indicated, indeed, they were. But it required Kelsey's ingrained BBC skills to resolve the 'mysterious transmissions' to images on a TV screen. The first attempt was a failure; the

Beachy Head receiving location had been pre-empted by early British radar installations which, as Kelsey would later report, "attracted daily low-level over-flights by Messerschmitts" rattling the very foundation of the tiny hut he and accomplice Alfred Hunt were using for the tests. To block the radar interference, Flight-Lieutenant S.F. Brownless was assigned to the small crew. They erected twin 105 foot masts, laced with pieces of wire and pipe, to create a 'monster' antenna peaked on the distant Eiffel source. It worked.

Kelsey would later report, "The pictures were to be resolved at all costs and at top speed. The real purpose was top secret." In fact, as British 'leaks' only appearing after the war in 1948 would first-reveal, Prime Minister Winston Churchill was personally in charge of the operation. What Kelsey and Brownless would initially discern was a static slide that read "Fernsehsender Paris" overprinting a line drawing of the Eiffel Tower. After several days of monitoring, Kelsey handed over command of the tiny hut's equipment to the Intelligence Service. "Brownless and I stayed long enough to appreciate one valuable service the enemy was rendering; his newsreels depicting our bomb damage in France (and Germany), with a commentary to whip up hate of the British, provided a wonderful record at close quarters of the success of our (RAF) efforts! It would have required almost suicidal reconnaissance crews flying at zero feet to obtain such shots of bomb damage in close-up. These pictures were ours for the watching for nearly two years."

Fernsehsender Paris did much more than show newsreel clips, although for Churchill's Intelligence officers this was the frosting on the stealthy cake. Paris was in the business of 'entertaining' Germans of high rank, whether injured or not, and it did this with no expense spared. In that process, notable Germans of every persuasion appeared on 'Fernsehsender Paris' and their close-up TV images immediately became still photographs in London which,

attached to 'shoot-on-sight' orders, doubtless resulted in premature death of multiple Nazi hierarchy by the hands of the French Underground. During this period, which ended abruptly on August 14, 1944, Fernsehsender-Paul-Nipkow (Berlin) continued to operate until bombed into oblivion by Allied planes (late 1943). The importance attached to the reinvented Fernsehsender service was only apparent after the Allied forces were in total control of both cities. In Berlin they found twenty-five cameras for studio use, six cameras for film and two complete mobile production units. The BBC, when it closed in September of 1939, had but seven studio cameras. Germany's on-going engineering development of video technology became even more alarming as the captured resources were catalogued following Nazi capitulation.

In late 1943, a U.S. group conducted two weeks of intensive tests away from prying eyes in a remote northern New York state area to evaluate the promise of marrying television technology to battlefields. It would turn out, on analysis, the Germans were even-with if not ahead in the same technology field when the war ended. Most impressive was a facility discovered manufacturing miniature electronic TV camera scanning devices in Reichenberg, Czechoslovakia managed by German firms Femseh and Blaupunkt. The Germans were within days or weeks of bringing into warfare large bombs and rockets equipped with in-nose-TV-cameras capable of being 'flown' or 'guided' by remote control from a mother plane up to fifty miles distant from the target. We might accept as routine such GPS (Global Positioning System) weaponry in 2009 but fifty years before GPS technology this would have been but one step lower in the war game.

The as-the-signal-flies distance from Eiffel to Beachy Head was (and remains today) 160 miles; 258 km. In terms of 1942 technology, it was a major stretch to create dependable reception over such a distance and if in fact the Germans even gave it a thought, the distance defied likely interception. German Kurt Hinzmann, the Fernsender Production Supervisor at the time in question, recalled his 'Ministry of Propaganda marching orders' during a late 1990s interview (<http://smashingtelly.com/2008/07/14/television-under-the-swastika/>). "We wanted to distract people from the war; this was at the time the largest television operation in the world." A 1943 film clip, carefully resurrected from over 200 hours of 35mm celluloid recently discovered in an East German vault, displays double amputee soldiers equipped with artificial limbs being 'exercised' in a ballroom dance marathon. The unidentified soldier relates, "All it takes is good cheer and will power to learn to move minus your legs." The 1943 voice-over announcer added, "And soon he will be fit for war again."

FCC Broadband Plan: Commission Sets 2015 Spectrum Deadline

Plan lays out clear timetable for broadcasters to clear off 120 MHz of spectrum, or about half their current allocation

By John Eggerton -- Broadcasting & Cable, March 15, 2010

The FCC's broadband plan lays out a clear timetable for broadcasters to clear off 120 mhz of spectrum, or about a third of their over 290 Mhz allocation, which has already been reduced by 108 MHz in the DTV transition, when channels 52-69 were reclaimed.

The FCC wants to issue the band-reclamation order by next year, then hold an auction in the 2012-2013 time frame, and clear them off the band in 2015.

While the plan is voluntary, the FCC also talks about freeing up 36 MHz by repacking the channels, which could come in the form of taking another six channels off the top, as it were, reducing the allocation to 45 channels and relocating the current occupants. Broadcasters would likely not have a choice about moving out of that 46-51 allocation if that were the plan.

The voluntary proposal, in which broadcasters would be compensated for moving, is part of its five-year spectrum plan outlined in Connect America: The National Broadband Plan, a report to Congress being publicly unveiled at the FCC's monthly meeting Tuesday (March 16).

Broadcasters will be encouraged to give up the most spectrum to reach that 300 MHz mark, with mobile satellite services giving up the second-most at 90 MHz.

While the need for broadcast spectrum will be greatest in urban areas, the FCC is looking to make it available nationwide to make it easier on carriers' cost structures.

It is unclear how that will sit with some of the legislators the plan was prepared for.

Rep. Rick Boucher (D-Va.), for one, chair of the House Communications Subcommittee, one of the key committees the FCC will need to work with on the plan, said two weeks ago that the FCC should not make any decisions about who to reclaim spectrum from until after conducting a spectrum inventory that Boucher thinks could take up to four years after a bill to that effect he co-sponsored has passed.

But the FCC's advice to Congress is that there is a growing spectrum crisis that needs to be addressed sooner rather than later. "If the U.S. does not address this situation promptly," says the plan, "scarcity of mobile broadband could mean higher prices, poor service quality, an inability for the U.S. to compete internationally, depressed demand and, ultimately, a drag on innovation."

The National Broadcast Plan

Doug Smith

Last year's *American Recovery and Reinvestment Act* charged the FCC with establishing an agenda to extend affordable broadband Internet access to the entire country. The Commission established a task force to research means of achieving that goal. That task force has presented its report, and the Commission has forwarded that report to Congress.

The *National Broadband Plan* is a rather lengthy 14-chapter document, downloadable from <http://www.broadband.gov>. I believe Chapter 5, "Spectrum", is probably the most relevant to broadcasters and DXers.

In particular, Recommendation 5.8.5: **"The FCC should initiate a rulemaking proceeding to reallocate 120 megahertz from the broadcast television (TV) bands,..."**

It proposes to achieve this through five steps:

- Update rules on TV service areas and distance separations, allowing the revision of the Table of Allotments to more efficiently use TV spectrum.
- Establish rules to allow two or more stations to share a channel.
- Establish rules for auctioning broadcast spectrum reclaimed through these methods.
- Consider additional alternatives, such as changes to technical standards or more extensive channel sharing, if necessary.
- Take additional measures to increase spectrum efficiency.

The plan does not envisage the elimination of over-the-air television. It does however suggest the UHF spectrum is far more valuable for other services. It notes that spectrum in the channels 52-69 zone, auctioned in 2008, sold for an average of \$1.28/MHz/person reached. The market value of TV spectrum is around 13¢/MHz/person.

The task force believes the FCC should:

- Update the technical rules defining service areas and distance spacing. This may allow stations to operate closer together on the same or adjacent channels without creating interference. (my opinion: in some cases stations are already too close together – ds)
- "Repack" assignments more efficiently, allowing existing stations to fit into a smaller number of channels.
- Establish a framework to permit two or more stations to share a single channel. The task force believes two stations could transmit HD in a single 6MHz channel. (my opinion: I'm very skeptical of this. I can see an HD station sharing a channel with a SD station, or multiple SDs sharing, but I don't think HD set owners are going to appreciate multiple HDs on a single channel. - ds)
- Auction off spectrum freed by repacking and voluntary channel sharing. Stations agreeing to sacrifice some spectrum for auction would receive a cut of the revenue and would be entitled to reimbursement for expenses. (for example, for replacing an antenna to move to a different channel)
- Establish a deadline for digital transition of LPTV stations by the end of 2015.
- Improve VHF reception, by increasing power limits or establishing minimum receiver and antenna standards. The idea is to discourage VHF DTV stations from seeking UHF allotments – those UHF allotments are more valuable for wireless broadband.

If additional spectrum transfer proves necessary, the task force suggests:

- Switching from the current "single large transmitter" model to a "cellular" model. Auctioning "secondary" rights to TV channels; winners could negotiate with broadcasters to clear their bands.
- Mandatory channel sharing.

The task force proposes a rather speedy deadline for this action. It believes the Commission should complete rulemaking no later than the end of next year; auction reallocated spectrum in 2012; and clear reallocated spectrum by 2015.

Channel Master[®] GOLDEN COLOROTOR[®]

*All-around World Champion[®]
in quality, performance and dependability!*

Rotator Features that Focus on Strength
Model 9510A

- Structurally integrated mounting studs provide maximum support for mast and tower mounting
- Reinforced mast support adds extra strength where stress is the highest
- Shortened housing improves support of the upper bearing ring and allows it to fit inside tower section
- One-piece cast aluminum housing
- EPC corrosion resistant coating
- Heavy-duty rotator motor
- Built-in steel thrust bearings
- Precision-cut, heavy-duty gears
- Wind-tested brake pads
- Captive screw closure

*COLOROTOR[®] is the world's largest selling rotator.

Simple, Quiet and Reliable Operation for Pinpoint Reception Control

- **Economical Design**
Sleek and compact with recessed knob. Features a low profile design that blends into any decor
- **Quiet Movement**
Overall noise levels are reduced with polyurethane insulation and a plastic fast gear. A single compression spring provides continuous, smooth action
- **Pinpoint Positioning**
Synchronized motors are accurate to within one degree for crisp, clear reception
- **Cable Strain Relief**
Protects terminals from tugs, twists and pulls
- **Short Proof/Shock Proof**
Barrier strip terminal board eliminates shorts due to strand contact between terminals
- **3-Conductor Wire**
Easier, faster, less costly installation

SPECIFICATIONS

Rotation	1 RPM
Gear Ratio	3200 to 1
Max. Mastng	2"
UL Listed	

ROTATORS

Single-Length Conductors

No need to go to great lengths to match conductors to the terminal board.

AUTOMATIC CONTROL UNITS

Model 9510A

115 volt 60 cycle AC, Rotor and Control Unit

Model 9527A

115 volt 60 cycle AC, Control Unit Only
