VHF-UHF DIGEST

The Official Publication of the Worldwide TV-FM DX Association

OCTOBER 2010

The Magazine for TV and FM DXers

T-R-O-P-O

HOW DO YOU SPELL RELIEF??

THE WORLDWIDE TV-FM DX ASSOCIATION

Serving the UHF-VHF Enthusiast

THE VHF-UHF DIGEST IS THE OFFICIAL PUBLICATION OF THE WORLDWIDE TV-FM DX ASSOCIATION DEDICATED TO THE OBSERVATION AND STUDY OF THE PROPAGATION OF LONG DISTANCE TELEVISION AND FM BROADCASTING SIGNALS AT VHF AND UHF. WTFDA IS GOVERNED BY A BOARD OF DIRECTORS:

DOUG SMITH, GREG CONIGLIO, BRUCE HALL, KEITH McGINNIS AND MIKE BUGAJ.

OCTOBER 2010

PayPall®

Finally! For those of you online with an email address, we now offer a quick, convenient and secure way to join or renew your membership in the WTFDA. Just logon to Paypal and send your dues to sales@wtfda.org.

Use the address above to either join the WTFDA or renew your membership in North America's only TV and DX organization.

Membership with Paper VUD: \$25/year Membership with eVUD (.pdf): \$11/year (subtract \$1.00 if paying by check or m/o)

Over 110 WTFDA members renew their club membership with Paypal. Why not join them?

TROPO!

So far, the month of September has turned out to be a decent month for tropo. I've been scanning the posts on the tvfmdx email list and find that September 2nd, 3rd, 6th, 17th and 18th tended to be the best days of the month for tropo. Steve Solomon and Roy Barstow saw WTAT(24) in Charleston, SC, 770 miles, on the 2nd. There was a path from NJ to NC on the 3rd and a path from MA to NC on the 6th of the month. The 17th showed tropo from ON to VA and other states. And then a really big opening occurred on the 18th which brought FM stations from Nashville and surrounding towns 850 miles into NJ, CT and western MA. Also the same morning another duct formed from NJ into Cleveland and Western MA to Buffalo/Toronto. And the month isn't over quite yet.

MEMBERS AND MORE

This month let's say hello to the following new members: **Donald Barnes** (FL), **Michael Levintow** (and Victor Schmidt) (DC), **Dave Hines** (NY), **Richard Cabral** (MA) and **Peter Luskey** (NY). Peter was at the NRC/WTFDA Convention in Rochester and decided to join.

Glad to have you all aboard!

Now we move on to the renewals from 8/16 to 9/13. We received them from William Hein (TN), William Eckberg (IL), Howard Fountain (GA), Frank Aden (ID), John Tudenham (MO), Wolfgang Schneiter (CA), James Snow (GA), Roosevelt Crawford (KS), Melvin Dishong (GA), Glen Boche (MN), Larry Weil (NH), Scott Fybush (NY), Lee Freshwater (FL), Mike Bugaj (CT), Glenn Hauser (OK), Trip Erikson (VA), Jeff Kadet (IL), John Lentz (WI), Bob Seaman (PA) and a rejoin from John Vervoort who is now living in Flint, Michigan. Thank you all for staying with us another year!

Peter Luskey writes that he's also a member of the National Radio Club and he's using a Sangean ATS-909 (Radiolabs version) for FM Dxing. I feel sorry for anyone trying to DX the FM band from anywhere near

Pinnacle Hill.

John Vervoort is also an NRC member and uses a Sangean ATS-909 for his FM DXing

THE FCC, ENGINEERS AND DTV

Al Tobia posted this on the WTFDA Discussion Boards and I'm re-posting it here. Al says "If you got time (like about 153 minutes total) check out the video of the

forum back on 6/25/10 with Broadcast Engineers and the FCC. They talk about taking spectrum for broadband, channel sharing, is it GOOD or BAD ,Distributed Television Systems (TV like cell phone tower methods), issues with VHF low and high band reception ,etc. Also power increases, can antennas be made better, a softer approach to the cliff effect, etc.

They bring up spectrum sharing with other services in low-band VHF only, how spectrum sharing would hurt the rest of TV (high-band VHF) and UHF, depending on the area, etc. The first part talks about channel sharing and poor picture quality issues because of it, the next part about DTS systems and one that was already tried in NYC by WCBS-TV, the last part talks about power increases, antennas, etc. with discussion centered around VHF reception issues. You can bounce around to part of video that interest you.

It is overall good if you have time to check it out. Go to FCC website, to FCC LIVE, then to PREVIOUS LIVE EVENTS then to BROADCAST ENGINEER FORUM 6/25/10."

MIDWEST DXERS FALL GTG

It's that time of the year again! There are country fairs and DX Get-Togethers. And the 18th annual fall Midwest DX GTG will be held this year at Branson MO from Nov 5-7 starting around 2pm Friday Nov 5th.

LOCATION SUPER 8 MOTEL 2480 GREENMONTAIN RD BRANSON MO PHONE 417 354 8880

Activities include possible station tours on Saturday Nov 6, and a few limited tickets to Silver Dollar City and the Mickey Gilley Theater shows. There will be a short AM DX Quiz with a donated prize and there's a free breakfast available at the Super 8. For those that may want a lower priced Motel there are many in the area.

Location is in center of Branson close to Highway 76. Maps are available of Branson at most business places.

And that's it for October. See you in November! -Mike

104-22-35

An application for a new digital LPTV on channel 16 in Santa Barbara, California has been dismissed. The City of Los Angeles objected – it's my understanding channel 16 is assigned for public safety radio use in Southern California.

The three digital replacement translators in southern Illinois (and the one in Cape Girardeau, Missouri) are to relay WSIU channel 8 in Carbondale.

On September 23rd, the FCC adopted Memorandum Report & Order #10-174, establishing rules for "TV Band Devices", also known as "White Space Devices".

These are unlicensed devices, expected to be used to extend Internet access to currently-unwired locations. "White space" consists of unused TV channels. (the definition of "unused" depends on who you talk to...)

A few highlights:

- A TV Band Device (TVBD) will contact a database and

provide its geographic coordinates. The database will respond with a list of available channels.

- A TVBD must be located some distance outside the protected contour of co- and adjacent-channel TV stations. For co-channel TV stations, the distance must be at least 6km if the antenna is 3m or less above ground; at least 8km if the antenna is between 3 and 10m high; and at least 14.4km if the antenna is more than 10m high. Again, these are distances that the TVBD must be beyond the protected area of the TV station. For adjacent channel operation, the separation is at least 100m for antennas up to 10m high, 740m for higher antennas.
- TVBDs must protect TV translator receive sites, cable system receive sites, and satellite (Dish/Direct) receive sites up to 80km beyond the service contour of the TV station being protected. The TVBD must be at least 80km away from a site receiving a co-channel TV station, and at least 20km from a site receiving an adjacent channel station, if the heading from the receive site to the TVBD is within 30° of the heading to the TV station. The distances are 8 and 2km respectively if the heading is more than 30° off.
- Systems more than 80km from the service contour have 90 days from the effective date of these rules to request a waiver. This waiver would entitle them to protection. New systems (and presumably new stations) would have 90 days from the initiation of service to request a waiver.
- Fixed TVBDs ("base stations") may operate on channel 2, channels 5-35, and channels 39-51.
- Portable TVBDs may not operate on any channel lower than 21.
- TVBDs must check the database of available channels when first turned on, or when moved to a new location.
- If a TVBD is not able to contact the database on a given day, it must shut down by midnight.
- The FCC will consider authorizing TVBDs that use "sensing" instead of the database. These devices must detect a -107dBm signal, using an antenna at least 10m above ground and of zero gain.
- Such TVBDs may use a channel if nothing is detected within 30 seconds. They must continue to check every 60 seconds and cease using a channel within 2 seconds if a signal is detected.
- Devices that use <u>both</u> sensing <u>and</u> the database need not shut down if they sense something but the database says the channel is available.
- The database will be maintained by one or more private firms. These firms may (presumably will) charge for access.
- Fixed TVBDs must transmit an identifying signal. The nature of this signal is not defined.
- For fixed TVBDs, the height of the antenna above ground may not exceed 30m. Also, the elevation of average terrain at the base of the tower may not exceed 76m. This precludes the use of extremely high sites to increase coverage.
- Fixed TVBDs may not exceed 4 watts EIRP. EIRP means ERP relative to a hypothetical "isotropic" antenna, which radiates equally well in all directions in both the horizontal & vertical planes. IIRC, EIRP is 1.8dB less than ERP so 4 watts EIRP is 6 watts ERP.
- Portable TVBDs may not exceed 0.1 watt EIRP. (0.15

watt ERP) Devices using sensing mode only are limited to 0.05 watt EIRP/0.075 watt ERP.

- The FCC expects these devices to spread their power throughout the channel. There are also "power density" limits - limits to how much power a device is allowed to radiate within a small fraction of their 6MHz channel.
- These limits are 16.7mW/100KHz for fixed devices, 1.67mW/100KHz for portable devices, 0.83mW/100KHz for sensing-only devices.
- This issue of the VUD would probably be more than 100 pages long if I tried to discuss what will be done to wireless protect microphones from interference......

So, what does this mean for TV DXers?

I think it depends. I am not an expert on these interference ratios, but it sure seems to me as if these rules are adequate to protect stations within their service

I think the question will be, how well does the FCC enforce these rules? Will devices reliably and accurately report their locations? Will the Commission adequately verify that sensing-only devices actually do sense signals?

I don't think a 6-watt device is going to ruin your reception, or even your DXing, unless you're pretty close. The 100mW devices that will be found in residential areas will be even less of a problem.

And as I posted on the mailing list, I would not be at all sure this service will ever get off the ground. It'll be complicated, expensive, and of questionable reliability. It may be touted as a means of getting broadband into rural areas. But the high cost of infrastructure means that, IMHO, we'll never see these in rural areas unless telecoms providers are re-regulated and required to serve high-cost areas in order to receive the franchise to serve lucrative low-cost areas. I will not be holding my breath.

Stay tuned.

Fred got to some of the LPTV wireless cable sites in outstate Minnesota, and forwards some translator primary info. In all cases, the translators are not modifying the virtual channel numbers broadcast by the primary stations. For example, KMSP-9 comes up as 9.1 not only in the Twin Cities, where you're watching directly from the main Minneapolis transmitter, but also if you're watching translator K14KE in St. James, or K23FO in Jackson, or K27FI in Frost.

The translators, listed by virtual channel:

St. James:

2 KTCA K26CS 4 WCCO K41IZ KSTP K30FN 9 KMSP K14KE KARE K21DG 11 KEYC (main xmtr.) 12 17 KTCI K29IE 23 WUCW K32GX WFTC K34JX KSTC K44AD 29 45

There is no KEYC translator at St. James; KEYC is available over its own transmitter. (on RF channel 12, as well as virtual channel 12)

At least three analog LPTV "cable" channels are available at St. James:

16 Discovery K16CG 40 TBS K40BU 42 CNN K42AV

All three are scrambled. Fred says he knows there are more analog channels here, but due to a receiver programming issue he wasn't able to monitor them.

Jackson:								
2	KTCA	K36IV						
4	WCCO	K35IZ						
5	KSTP	K40LA						
9	KMSP	K23FO						
11	KARE	K19HZ						
12	KEYC	K50KL						
23	WUCW	K43ML						
29	WFTC	K51KT						
45	KSTC	K45EH						
46	KDLT	K41EG						

Frost:

2	KTCA K40JS
4	WCCO K35IU
5	KSTP K14KD
9	KMSP K27FI
11	KARE K31EF
12	KEYC K49JG
23	WUCW K23FY
29	WFTC K29IF
45	KSTC K51KB

Most of these primaries carry two (or more) programs:

2	KTCA	2.1 2.2 2.4	"tpt 2", PBS "tpt MN" "tpt WX"
4	wcco		CBS (no subs)
5	KSTP	5.1	"KSTPDT1", ABC
0	KMCD	5.2	"KSTPDT2"
9	KMSP	9.1 29.2	"KMSP-HD", Fox
11	KADE		"WFTC-SD", My
11	KARE		"KARE-HD", NBC
40	1/51/0	11.5	"KARE-WX"
12	KEYC		"KEYC-DT", CBS
		12.5	"KEYC-FO", Fox
17	KTCI	2.3	"tptLife"
23	WUCW	/ 23.1	"WUCW-HD", CW
		23.2	"WUCW-SD", CW
29	WFTC	29.1	"WFTC-HD", My
		9.2	"KMSP-SD", Fox
45	KSTC	45.1	"KSTCDT", ÎND
		45.2	"KSTCDT2", ThisTV
46	KDLT	46.1	"KDLT-HD", NBC
-		46.2	"KDLT-US", U-Sports

Interesting, about KARE & KEYC being on minor channels 4 & 5 instead of 1 & 2. Fred says their primary stations are using minor channels 1 & 2, somehow the translators are changing it.

Note that for KTCA and KTCI, there are four virtual channels spread among the two transmitters, all using major channel 2. This is permitted under the ATSC standard, if the two transmitters are co-owned and in the same market. Subs .1, .2, and .4 are on the KTCA transmitter; sub .3 is on the KTCI transmitter.

Note also that Fox's two transmitters serve as backups for each other. KMSP, the Fox affiliate, airs in HD on channel 9.1 on its own transmitter (and translators), and in SD on channel 9.2 on WFTC's transmitter. (and translators) In the other direction, WFTC, the My affiliate, airs in HD on channel 29.1 on its own transmitter, and in SD on 29.2 on KMSP's transmitter.

Fox does the same thing with their New York City transmitters for WNYW and WWOR.

The colon in the name of the city of license for the denied channel 26 LPTV in Oregon is not a typo on my part. (": Eugene")

Good DX!

TV NEWS CONTINUES FROM PAGE 11

FCC proposes drop-dead date for analog LPTV

On September 17th, a drop-dead date was set for analog LPTVs. Sorta. A Further Notice of Proposed Rulemaking and Memorandum Report & Order was released, proposing to further clarify the digital transition for low-power stations, Class A stations, and translators.

- "...we seek comment on whether to adopt an analog shutoff date in 2012,..." That's what I mean by "sorta" you'd think they could have been more specific!
- They ask whether a later shutoff date after the proposed transfer of channels 46-51 under the Broadband Plan or possibly at the end of 2015 might be in order.
- An earlier shutoff date is proposed for LPTV stations operating above channel 51. (yes, there <u>are</u> still LPTVs up there.) The FCC proposes to require these stations to move below 52 by the end of next year. (this includes *digital* LPTVs operating above channel 51, there <u>are</u> some of these too.)
- The FCC has frozen applications for new analog LPTVs. There will be no new analog low-power stations authorized. (I thought they'd already done that...)
- They have also frozen applications for new or modified LPTVs above channel 51.

Comments will be due within 60 days of publication in the Federal Register (probably around the beginning of December) and reply comments within 90 days. (probably around early March, 2011) I suspect we'll see a shutdown date in mid-summer of 2012.

FM DXers note! This means the death of the "FrankenFMs", channel 6 LPTV stations operated as 87.7MHz FM facilities.

Stations like WNYZ-LP "Pulse 87" in New York, WLFM-LP "The L" in Chicago, and KFMP-LP in Lubbock, Texas have been licensed as analog LPTV stations. Under a loophole in the FCC regulations, the limits on the modulation of a TV sound signal do not seem to apply to low-power stations. And, best I can tell, it was legal for <u>any</u> analog TV station (even full-power stations, when they still existed) to use the FM stereo system. As a result, it's been legal for these channel 6 LPTVs to operate their audio transmitters at 87.75MHz using *FM* technical standards.

This frequency is of course receivable on most ordinary FM radios. (one station is rumored to have pushed things by operating their audio transmitter at 87.9MHz. From what I've heard the FCC didn't buy that & forced them back to 87.75.)

Now, I can't rule out the possibility the FCC will create (by mistake or otherwise...) another loophole..

But I think we can reasonably assume that, when LPTV stations are required to go digital, these 87.75MHz analog audio signals will go away – and with them, the "FrankenFMS".

The Editor's Note

September featured several tropo openings of note across the eastern half of the country, most notably on the 17th and 18th. DXers in the Midwest reported UHF tropo as far east as Virginia on the 17th. Several DXers in the northeast received over 800 mile tropo to Tennessee on the 18th, but those distances seemed only confined to FM. As we head into October, the best chances for tropo will shift farther south, with the Gulf of Mexico beginning to come into play. The early portion of the month however is favorable for tropo pretty much anywhere east of the Rockies, so keep an eye out.

channel 46 January 16. A check with KEYC revealed that they never operated on channel 46 and went from analog channel 12 to DTV channel 12 directly. They have no channel 46 translators. At this point I suspect the channel 46 was a translator in Falls City, NE which normally rebroadcasts KUON on channel 12 from Lincoln. Both KEYC and KUON have PSIP as 12-1. I also thought I had KMSP on channel 14 from Minneapolis on August 22. Turned out to be K14KE-D from St. James, MN. Remapping in DTV continues to cause confusion. Thanks to Glenn Hauser I logged KWTV on channel 9 not long before "Old KWTV" shut down and they were on channel 39 only.

Dennis Park Smith

3605 Sam Remo Drive Santa Barbara, CA 93105-2523

Tel: (805)687-7803 Times 24-hour PDT

This report is for August 2010, continuing with mediocre southern-Calif coastal tropo up to about 220 mi, steady but poor strength. Not a typically good summer for tropo ducting---until Aug 22, when it finally improved. Late-August stable combination of inversion and high pressure (usually a summer-long pattern) may have made the difference---for a week. Still past years were better yet, even on my small antennas. Another negative may be cold ocean water temps, this summer 55-60F and continuing, compared to 60s and up to 70 in past years. All seen on LG 20" flat screen at my place with inside antennas, except Aug 23 & 26 at Don Voegele's place with outside antennas.

Jul 25-31	Poor to very poor
Aug 1-5	Variably fair
Aug 6-7	Poor
Aug 8-21	Var. poor/very poor
Aug 22-27	Var. fair (some signals good)
Aug 28	Poor to very poor
Aug 29	None
Aug 30 morn	Very poor, improving
Aug 30-Sep 1	Out of town – WASCO

SBARB, tropo from So-Calif tropo list last month & more stns here, analog & DTV, my place. Apx mi.

7/23 - Es

1148 KBHZ 91.9 Willmar MN Contemporary Christian music, "Praise FM"

Well, the Es season ended abruptly and this is the last of this season's DX from here. The season featured my first Mexican logging on FM but the number of new stations was down, partly due to a number of brief, spotty, low-MUF openings and partly due to many of the better openings occurring during work time, leaving me with only 3 sets of unattended recordings.

Jeff Falconer - Clinton ON EN93fo Sangean HDT-1X, Sony XDR-F1HD, APS-13 at 22', 10db preamp New=* New calls={XXXX} Time=ELT Distances=Miles

Winegard introduces Gold * Star, the best performing, best built "V" line of antennas for television reception.

Gold Star V/U models feature our patented UHF tetrapole driven element. Results in no loss coupling of the VHF and UHF sections of the antenna. A special corner reflector screen acts as both VHF high band directors and UHF reflector. VHF models have full wave directors on the hiband to increase gain and capture area.

It was a good but all too short skip season for me (and everyone else). I especially enjoyed my virtual mini vacations to Canada and the Pacific Northwest. I am very thankful that I received two copies of the new 21st edition of Dr. Bruce Elving's FM Atlas, which has been a huge timesaver in IDing stations. I keep one at home and one in the car. As always, the maps are top notch! 73

6 Meter/2 Meter Amateur DX

50 Mhz The *Magic* Band

Peter Baskind, N4LI 3225 Forest Hill-Irene Rd Germantown, TN 38138 N4LI@ARRL.net

We have already discussed how the summer sporadic-E (E_s) season came to an early and abrupt end. It was a bit disappointing, but it is all part of the game. So, the next several weeks are the lean times for VHF hams -- E_s is over and tropo openings are few and far between.

Still the occasional tropo opening does happen. And, since the E_s season ended, there have been a couple of good ones.

Here in the middle of the continent, a very nice band opening surprised us the evening of August first (early in the morning August second, UTC). I was lucky enough to be at the opening's "sweet spot," right at the far end of the duct. I managed to squeeze out EN22 on 2 meters (144 MHz), new grid in Iowa, and two new grids in Minnesota, EN33 and EN35 (a distance of 743 miles). I also worked Bill, K0AWU in EN37, northern Minnesota, at 857 miles. Interestingly, Bill was my first sporadic-E contact on 2 meters *ever*, back in 2004. He's a good guy and a fine operator; it was fun to work him again. The contact did illustrate, however, just how fickle some tropo openings can be. At my station, K0AWU was often as strong as S7, an easy "armchair" copy. Still, another operator fewer than 30 miles away could barely copy Bill and after a couple of hours of trying, was never able to make a contact, even with me working as an intermediary.

An even better opening materialized the morning of September eighteenth. Again, I was in the right place, almost perfectly at the far end of the duct. While WTFDA FM DXers were hearing paths between Middle Tennessee and Pennsylvania, the 2 meter band was hopping. I squeezed out four new grids – a very nice haul – with EN81 and EN91 in Northern Ohio (grids that, frankly, I should have gotten long ago), EM96 in Southern Virginia, and FN10 in Middle Pennsylvania (the longer of the two contacts being 822 miles). I was also shocked to work two stations in Connecticut, one of which was a whopping 1043 miles out. I had worked both stations multiple times before via E_s, but it was fun to work them again via tropo. Again, these were easy contacts, peaking to S7, strong enough to have a brief but friendly chat.

The most impressive signal on the band during the September opening had to be WA2FGK in FN21. He was strong... *really* strong. Signal was a good, honest S9+20 at 867 miles! The station was so robust that Doug, W9WI near Nashville in EM66, worked him with only 50W and a single-element halo just above the ground. That's amazing for a contact of nearly 700 miles.

Those lucky enough to be in the Plains States got their share of tropo on August 22. It was quite an event – so intense that one ham commented that 144.200, the traditional 2m SSB call frequency, was so busy that "only the strong survived." Perhaps the most interesting contact I saw logged was from Eastern Oklahoma to EN09 in Southern Manitoba, a contact around 1000 miles. The same operator was making QSOs with stations in the Dakotas and Minnesota, all very impressive distances. Despite the intensity of the opening, it was very narrow. While those fewer than 300 miles from me were making near-historic contacts, I was hearing nothing. That again illustrates an important point: with many openings, you're either in the duct or not. Being close just is not enough.

Loggings

Bill Smith, W1OW, 56 Locust St., Douglas, MA 01516 FN42

Nothing noted during August except OZ1DPR/JO45 heard for a few seconds on August 7th.

An almost complete lack of E-skip. QSLs received from SV9GPV (Crete) and J8/W8IF (St. Vincent) to reach 98 confirmed. Maybe I'll get to the 100 mark next year especially if the new Caribbean countries [from the breakup of the Netherlands Antilles] materialize that's supposed to happen on October 10.

Finally, a few QSLs – two from 6m DXer, Bill Smith, one from Jeff Kadet in Illinois, and one from the tropo opening in early August.

Armstrong Wasn't the Only One

by James E. O'Neal, 09/16/2010

An earlier version of this article misidentified the author of a biography of Edwin Armstrong. It is corrected here to Lawrence Lessing.

You probably know that Edwin H. Armstrong single-handedly invented frequency modulation,

delivering a fully developed system in the early 1930s. Perhaps you also have heard that no one else was very much interested in FM, especially after John Carson, an AT&T engineer and FM naysayer, published an analysis in 1922 declaring that FM "inherently distorts without any compensating advantages whatever."

You also know that Armstrong discarded existing preconceptions about narrowband FM when he began his experimentation, and moved right into wideband transmission as a means of eliminating static and delivering hi-fi audio to listeners. You probably believe too that RCA did everything possible to kill off FM, as it challenged the well-established RCA/NBC broadcasting empire.

According to Gary Frost, who's both an historian and engineer, we've got it all wrong.

Ehret and friends

Frost has just published a fresh look at the genesis of frequency modulation — which, by the way, didn't begin in the 1930s with work done by Armstrong at his Columbia University lab.

Frost's "Early FM Radio: Incremental Technology in Twentieth-Century America" traces FM's beginnings all the way back to 1902 and a patent application submitted by an obscure Philadelphia inventor, Cornelius Ehret.

Ehret described the use of FM for both radiotelegraphy and radiotelephony, and included circuitry for both FM transmission and reception. Frost's research has unearthed a total of 83 FM patents filed between 1920 and 1934. Armstrong received his wideband FM patent near the end of 1933.

Frost's investigation shows that while RCA had the lion's share of these patents (44) — and actually was conducting on-air testing of FM as early as 1925 — GE, AT&T and Westinghouse (notably KDKA's legendary Frank Conrad and others at that station) also were experimenting with this form of modulation.

The concept of the FM receiver "limiter" stage is shown to predate Armstrong's wideband FM work, with Frost directing the reader's attention to RCA's Clarence Hansell and patents issued in 1927 and 1928.

The author notes that before the big "breakup" between Armstrong and RCA's David Sarnoff in the mid-1930s, Armstrong was "almost an RCA employee" in terms of having access to radio research work at the company.

However, this was anything but a two-way street, as Armstrong was quite secretive about his own FM work. Frost states that "Armstrong clearly owed much to his [RCA] friends at Riverhead," and that he applied knowledge of RCA's successes and failures in his own work.

Frost sets right the comments of AT&T's John Carson about FM's ability to distort, and identifies Carson as the father of single-sideband modulation (something that Frost terms "probably more important than hi-fi FM").

Fixing the record "Early FM Radio" attributes many of the modern misconceptions about FM's early history to biographer Lawrence Lessing and his posthumous tribute to Armstrong, published two years after the inventor's plunge to his death on Jan. 31, 1954.

Lessing's book, "Edwin Howard Armstrong: Man of High Fidelity," is shown by Frost to be a less than accurate representation of the facts leading up to modern FM broadcasting, yet it became the "gold standard" concerning Armstrong and his achievements. (Lessing's dissemination of misinformation has been compounded by later writers who accepted the account without question and echoed portions of it in their own works.)

Frost flags one of the most famous (yet spurious) incidents described by Lessing in connection with the first public demonstration of FM, which occurred on Nov. 6, 1935. Armstrong had arranged for a close friend — Randy Runyon — to broadcast via FM from his Yonkers, N.Y. home to the audience assembled at an Institute of Radio Engineers meeting in Manhattan. In his 1956 book, Lessing described an elaborate battery of sound effects — water being poured, paper crumpled and torn, various forms of music — that were staged as part of the demonstration.

Frost observes: "No one who attended that day reported hearing reproductions — vivid or otherwise — of crumpled paper, oriental gongs, guitars ... Nor could they have, for Armstrong had yet to incorporate the 'high fidelity' circuits into his system that the reproduction of such sound effects requires." Frost adds that this description of sound effects most likely came from a newspaper article that Lessing published some three and- a-half years later.

This is a schematic representation of Cornelius D. Ehret's FM transmitter, shown in his 1905 patent 'Art of Transmitting Intelligence,' discussed in Frost's book. The element at upper right, identified as #17, is a condenser microphone for instantaneously varying the transmitter's frequency.

While I maintain a deep respect for Major Armstrong and his many accomplishments, due to the investigative efforts of Frost I now have to temper that a bit with the reality that this well-documented history provides.

It's been said many times that television was not invented by any one person; the same must now be said for FM broadcasting. While Armstrong played a large part, even personally funding the construction and operation of the world's first FM radio station, Frost proves rather conclusively that he had company along the way in making wideband FM a reality.

"Early FM Radio" presents a refreshing new view of the development of FM radio, and one that is much overdue. It's a must-read for those of us who have spent most of our lives believing that FM was a one-person invention.

I should note that Frost's book is refreshing in another way. He breaks away from the current hertz, kilohertz and megahertz frequency designations, reverting to the "cycles," "kilocycles" and "megacycles" that were in use at the time FM was being invented.

If I could change anything at all about Frost's book, it would be the reproduction on Page 74 of three pages from a 1931 letter from RCA's Hansell to Armstrong. These are compressed into a tiny space of 3.5 x 7.5-inches, making them almost illegible (especially to many of us who arrived on the scene in the decade of the 1930s, or the one immediately following). Hopefully, future editions of Frost's book will provide a little more real estate for these pages and eliminate the need to locate a high-power magnifier to understand why he included them.

"Early FM Radio: Incremental Technology in Twentieth-Century America" is published by the Johns Hopkins UniversityPress.

James O'Neal is technology editor for TV Technology magazine and a frequent contributor to Radio World.

Internet radio station makes leap to airwaves

OCRACOKE ISLAND, N.C.

After a year of being online only, Ocracoke Community Radio WOVV-FM, the island's first legitimate full-power - and legal - radio station, will soon be filling airwaves with local music, news, events and eclectic programming.

Robert Raborn, who launched the idea for the community-focused station more than two years ago, learned Wednesday that funds from a \$67,000 federal grant were finally available to order transmission equipment.

WOVV 90.1 FM could be broadcasting 24 hours a day from the village of this isolated barrier island as soon as this summer.

AThis is a unique place out here on Ocracoke, and this is a pretty unique project, Raborn said. And I think this is the right place to pull it off. When Raborn, 40, learned of an opening on the radio band in 2007, the non profit Ocracoke Foundation agreed to sponsor their application. The 650-watt noncommercial station, supported by donors and operated without advertisements, will officially range from Portsmouth Island to the Ocracoke Pony Pens, he said, but with the island's flat unobstructed expanses of sand and water, coverage may stretch as far as Hatteras village.

The station's studio, built with a \$10,000 grant from the Outer Banks Community Foundation, is on Silver Lake Harbor next to the Anchorage Inn Marina, and the antenna will be soon be built behind the firehouse. Programming and staffing will evolve as progress is made and creative juices flow.

Alt's at a real natural Wild West stage now, Raborn said.

Currently, the only reliable radio signal heard on the island comes from an off-island country music radio station. One big impetus for the station was to be able to get out timely and accurate information about storms and other events, said Greg Honeycutt, who has been in charge of fundraising.

Alt's going to be extremely valuable, he said. But the station also hopes to be the voice of the community with broadcasts of fishing and surfing reports, updates about school events, airing of county meetings, and coverage of school sporting events. Local musicians have been frequent guests of the station already.

Villagers, visitors, businesses, nonprofit donors and out-of-town property owners have responded enthusiastically to fundraising efforts, said Honeycutt, a businessman who moved to the island in 1997 from Dare County.

AThis whole thing has been very grass-roots, the said. AWe have had a lot of people that have jumped on the bandwagon and see the value of the station.

A \$67,000 grant was awarded last September by the Public Telecommunications Facilities Program, and Honeycutt headed a campaign to raise the required \$22,000 match - which he said was recently met, mostly with large donations from off-island sponsors. Donors also contributed in small amounts online.

FCC FREES UP VACANT TV AIRWAVES FOR "SUPER WI-FI" TECHNOLOGIES

Washington, D.C. -- The Federal Communications Commission today took steps to free up vacant airwaves between TV channels -- called "white spaces" -- to unleash a host of new technologies, such as "super Wi-Fi," and myriad other diverse applications. This is the first significant block of spectrum made available for unlicensed use in more than 20 years.

TV white space spectrum is considered prime real estate because its signals travel well, making it ideally suited for mobile wireless devices. Unlocking this valuable spectrum will open the doors for new industries to arise, create American jobs, and fuel new investment and innovation. The National Broadband Plan noted the importance of unlicensed spectrum in creating opportunities for new technologies to blossom and recommended that the Commission complete the TV white spaces proceeding as expeditiously as possible.

The Second Memorandum Opinion and Order (Second MO&O) adopted today resolves numerous legal and technical issues. Notably, the Order eliminates the requirement that TV bands devices that incorporate geo-location and database access must also include sensing technology to detect the signals of TV stations and low-power auxiliary service stations (wireless microphones). It also requires wireless microphone users who seek to register in the TV bands databases to certify that they will use all available channels from 7 through 51 prior to requesting registration. Requests to register in the database will be public, thus allowing interested parties to weigh in on any given request.

The Commission is also taking steps to ensure that incumbent services are protected from interference from the use of white spaces in various ways. In particular, today's *Order* reserves two vacant UHF channels for wireless microphones and other low power auxiliary service devices in all areas of the country. It also maintains a reasonable separation distance between TV White Space device and wireless microphone usage permitted to be registered in the database Action by the Commission September 23, 2010, by Second Memorandum Opinion and Order (FCC 10-174). Chairman Genachowski, Commissioners Copps, McDowell, Clyburn, and Baker. Separate Statements issued by Chairman Genachowski, and Commissioners Copps, McDowell, Clyburn and Baker.

ET Docket Nos. 03-280 and 04-186.
