Thanks everyone for your support of the WTFDA!

### **AMAZING DECEMBER E-SKIP**

Although it's winter for those of us north of the equator, on the other side it's summer and E skip season, and on one of the DX reflectors we found an E Skip event reported by William Renton of Numerella, NSW, Australia. His reception of DXWT 92.3 in Davas City, Philippines on December 3, 1027 measured out to 5435km/3362 miles. This is the longest Es reception we've heard about in years, and although it's not a record distance, I would probably

rank it in the top five longest distance FM Es catches and something to be proud of.

#### TV DXING IN HAVANA

This month we welcome Pedro César Morales to the WTFDA. Pedro is a TV DXer living in Havana. Pedro says that there are around 8-10 TV DXers in Havana along the coast. He says that all of them are at least in their 40s...and that the youngsters there have no interest in DXing. Here is a photo of his equipment You might

recognize a Zenith DTT901 converter box.

And on the roof, he has a CM 4251 parabolic:

A few words from Pedro: The kind of dxing that a small group of friends (from the analogue times) still do here in Habana is just focus in catching the signal from Miami the best we can. Back in the analog era, many years ago, we were very motivated about catching channels from such far away places like Pensacola, Jacksonville, New Orleans, even from Dallas and Puerto Rico on the low vhf band, especially during the E-sporadics on March and April, but now we prefer to be more focus on the stations that can be checked every day like those from Miami and sometimes Ft. Myers and Tampa.

For the FM band Pedro has a Sony XDR-S3HD radio

For low vhf sometimes I use for testing my Winegard FM, but at this moment in Habana is very frustrating dxing either in vhf low or high, because there are too many interference either from the local analog ch or the digital ones. There are also many interference in uhf, too from either kind of local transmitions. Even some of the strongest uhf ch from Miami that I daily tune are attenuated by the presence of the local channel on the same frecuencies. This situation worsen for dxing since here started transmitions in the uhf band in the 2000's and specially since digital broadcasts started around the middle of 2013. I remember once in the 80's with an FM antenna I got channel 4 from Dallas and in another season channel 2 Telemundo from Puerto Rico and the antenna was not even pointing to it.

Thank you Pedro César for the photos. We'll be thinking of you while we here in the north freeze in zero (F) degree temperatures. We will be back again next month! -Mike

Casper	22	K22MC	From K49LJ, 5kw
Gillette	26	K43KW	From 43, 5.8kw due to T-Mobile. Also requests Special Temporary Authority for this channel.

Well, that's more manageable (grin). 11 pages instead of 30-something. We'll make up for it with FM (grin).

Implementation of sharing arrangements is now accelerating quickly.

I list 131 stations which chose to share in the auction and were bought by the FCC. Of those 131:

- 93 have already filed sharing arrangements.
- 22 opted to surrender their license instead.
- 16 are not yet settled. I expect some will file sharing agreements at the last minute; others will surrender their licenses.

JANUARY 2018 ··· 13 ··· TV NEWS

### Channel-Sharing Update: January 2018

Sharing arrangements in **boldface** below have already happened; see the date in the **Notes** column. Two stations have announced sharing effective dates in the future. Three stations have filed for an extension of their forced signoff date and have indicated in their extension requests that they have channel-sharing agreements in place with a specific other station. However, those agreements have not yet been filed.

Several stations have changed their principal communities ("City of License", or "COL"). They're sharing guests on host stations whose signals aren't adequate across the stations' old principal communities. I apologize for the small font; it is challenging to get these to fit in a reasonable amount of space!

Good DX!

AMERICAN METEOR SOCIETY

amsmeteors.org

### **UPCOMING METEOR SHOWERS**

Quadrantids January 1st to January 10th, 2018

The Quadrantids have the potential to be the strongest shower

is 25. These meteors usually lack persistent trains but often produce bright fireballs. Due to the high northerly declination (celestial latitude) these meteors are not well seen from the southern hemisphere.

### Lyrids April 16th to April 25th, 2018

The Lyrids are a medium strength shower that usually produces good rates for three nights centered on the maximum. These meteors also usually lack persistent trains but can produce fireballs. These meteors are best seen from the northern hemisphere where the radiant is high in the sky at dawn. Activity from this shower can be seen from the southern hemisphere, but at a lower rate.

### Eta Aquariids April 19th to May 26th, 2018

The Eta Aguariids are a strong shower when viewed from the southern tropics. From the equator northward, they usually only produce medium rates of 10-30 per hour just before dawn. From the equator to 25S they can produce rates of 40-60 per hour just before dawn at maximum. The longer nights in the southern hemisphere allows the radiant to rise higher in their sky. South of 25S the radiant altitude actually decreases. Activity is good for a week centered the night of maximum activity. These are swift meteors that produce a high percentage of persistent trains, but few fireballs.

January 2018

Ah, the good old days. When there was no such word as "pixelation". Only that familiar E-skip or Tropo buzz that meant it was time to grab a six pack and settle down for some long-haul DX that sometimes turned into an all-nighter. More from the analog files of Ed Phelps, Benton, KY:

### Phoenix To Serve As 'Model Market' For ATSC 3.0

Ten stations in the market will deploy the next-generation TV standard before early April 2018

Written by Phil Kurz for TV Technology [Nov 15, 2017]

Source: http://www.tvtechnology.com/atsc3/0031/phoenix-to-serve-as-model-market-for-atsc-30/282269

PHOENIX—Seven broadcasters across 10 stations in Phoenix will launch what they describe as a "model market" to demonstrate the viability of the next-gen ATSC 3.0 ecosystem while at the same time continuing to serve over-the-air viewers with legacy ATSC 1.0 digital television, the broadcasters announced today.

The broadcasters include E.W. Scripps Company, Fox Television Stations, Meredith Local Media Group, Nexstar Media Group, Tegna, Telemundo Station Group and

Univision. The Pearl TV consortium will coordinate the effort.

"Our goal is to have the market serve as a model for deployment for the next generation of TV service," said Anne Schelle, managing director of Pearl TV.

"That will provide the industry with the components and framework that will be common as guidelines for the industry to deploy 3.0 services."

Government authorization allowing broadcasters to begin deploying ATSC 3.0 on a voluntary basis is expected to be granted Nov. 16 at the FCC's monthly Open Commission Meeting in Washington, D.C.

If commissioners vote in the affirmative, the participating Phoenix broadcasters will aim to have ATSC 3.0 service on air before the NAB Show, April 7-12 in Las Vegas, said Schelle.

There were a few reasons Phoenix, with more than 20 percent of its 1.8 million TV viewers receiving OTA television, was chosen for the model market project, she said.

"First, we are already testing together for the Verance watermark test," said Schelle. Another factor was separate ATSC 3.0 interactivity testing Pearl TV has been involved with in the market.

Additionally, the consortium has a good relationship with cable operators in Phoenix, which makes it easier to test MVPD interoperability, she said.

Anne Schelle

Finally, only a couple of the stations participating in program will be changing channel assignments as part of the FCC TV spectrum repack and those stations are assigned to Phase 1 of the repack, she said. That made it relatively uncomplicated to get an early start in Phoenix.

### Participating stations include:

- ♦ KNXV (Channel 15), E.W. Scripps Company's ABC affiliate;
- ◆ KSAZ (Channel 10), Fox Television Station's Fox station;
- ♦ KUTP (Channel 26), Fox Television Station's MyTV Network;
- KPHO (Channel 17), Meredith Local Media Group's CBS affiliate;
- ◆ KTVK (Channel 24), Meredith Local Media Group's independent;
- ◆ KASW (Channel 49), Nexstar Media Group's CW Network affiliate;
- ◆ KTAZ (Channel 39), Telemundo Station Group's Telemundo station
- KPNX (Channel 12), Tegna's NBC affiliate;
- ◆ KFPH-CD (Channel 35), Univision's UniMas station; and
- ◆ KTVW-DT (Channel 33), Univision.

Phoenix will serve as a testbed for the business models and the consumer testing needed to prepare go-to-market strategies for next-generation television, said Schelle.

Among those are over-the-air delivery to fixed receivers, mobile –especially for the automotive market —as well as interactivity and MVPD retransmission.

An equally important thrust is to demonstrate the viability of the lighthouse approach to keeping legacy DTV on-air while broadcasters transition to 3.0, she said. The approaches taken in Phoenix can serve as a model to the entire industry.

Schelle said she envisions channel sharing beyond what she calls "self-sharing," or duopolies, as part of the effort in Phoenix.

"All of this demonstrates to the market the seriousness of broadcasters [regarding 3.0] and the need for the entire ecosystem to invest and complete implementations," she said.

"The standard is near completion. Now it is time to build and get out to the marketplace."

# Norway becomes first country to switch off FM radio

Source: https://www.thelocal.no/20171213/norway-becomes-first-country-to-switch-off-fm-radio

Norway on Wednesday completed its transition to digital radio, becoming the first country in the world to shut down national broadcasts of its FM radio network despite some grumblings.

As scheduled, the country's most northern regions and the Svalbard archipelago in the Arctic switched to Digital Audio Broadcasting (DAB) in the late morning, said Digitalradio Norge (DRN) which groups Norway's public and commercial radio.

The transition, which began on January 11th, allows for better sound quality, a greater number of channels and more functions, all at a cost eight times lower than FM radio, according to authorities.

The move has however been met with some criticism linked to technical incidents and claims that there is not sufficient DAB coverage across the country.

In addition, radio users have complained about the cost of having to buy new receivers or adapters, usually priced around 100 to 200 euros.

Currently, fewer than half of motorists (49 percent) are able to listen to DAB in their cars, according to DRN figures.

According to a study cited by local media, the share of Norwegians who listen to the radio on a daily basis has dropped by 10 percent in one year, and public broadcaster NRK has lost 21 percent of its audience.

"It's a big change and we have to give listeners time to adapt to digital radio," the head of DRN, Ole Jørgen Torvmark, said in a statement.

"After each shutdown (in a region), we noticed that the audience first dropped but then rose again," he added.

The transition concerns only national radio channels. Most local stations continue to broadcast in FM. [emphasis here added by VUD editor]

Other countries like Switzerland, Britain and Denmark are due to follow suit in the coming years.

# **SIGN UP & Renewal Form**

YEARLY DUES \$10.00 USD for Monthly VUD E-ZINE

Print this form and send it with your dues.
