And thank you all for supporting the WTFDA!

This month we welcome two new members to the WTFDA. Lee Costic DXes FM down in Virginia. James Bagge resides in Springfield, MA. Welcome to both of you. Hope you find WTFDA interesting and informative, and most of all, fun!

THE SURVEY

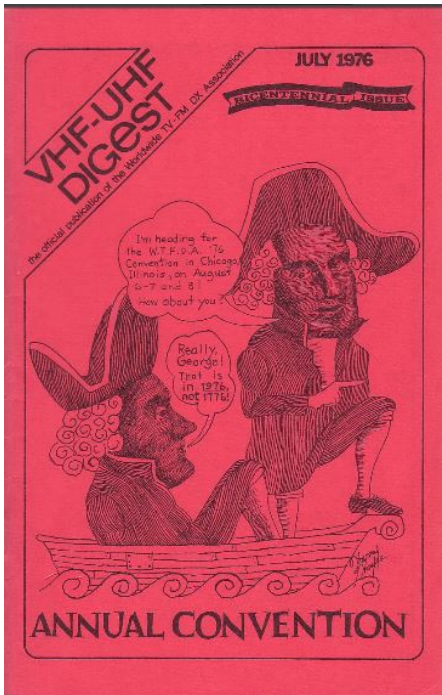

Let's talk about the survey for a little while. We received only 8 responses out of about 200 members, which means it is hardly representative of the club as a whole, but at least it's something.

Everyone who responded agreed that the club is meeting their expectations, but there *could* be improvements. Someone mentioned conventions. One thing that has been missing for some years now is a WTFDA convention in the summer. The conventions in the east were well attended. We have the funds to pay for all convention costs. We just need people to host the conventions. That's the tough part. So if someone wants to host a convention, let somebody know. It won't cost you any money, just some time.

One person thought that the VUD would look better if it were all in single columns.

Another person laments the lack of DX reports in the VUD and that's a concern with me also. The

maddening thing about this hobby is the fact that it's so fragmented. A few people post here and another few people post there and they are all in their own little groups all to themselves. You see that everywhere now.

Back in the day, the VUD was full of DX reports which were then archived for posterity. You could go back to the July 1976 VUD and read what the conditions were back then and what stations were heard or seen. You'd have a record of skip and tropo openings. The VUDs were a valuable resource tool but that era seems to be over. (Go to <http://www.wtfda.org> to read the July 1976 issue).

Do we have to resort to taking posts from Facebook and posting them in the VUD, like we did a month or two ago, just so we have some DX reports? Honestly, I thought someone would mention this, but nobody has. Should the VUD mainly consist of TV News, FM News and Facilities? At least two people thought we should have more DXer interaction in the VUD.

And yes, I know there are at least a dozen other reasons for the lack of reports, many related to the fact that this is 2018 and, for many people, DXing is done differently now (SDRs) and also the fact that there are probably fewer people, for whatever reasons, actually doing the DXing, especially TV DXing with analog gone.

Someone thought we should encourage our veteran members to write articles about themselves for the VUD, and possibly include a photo or themselves and/or their shacks. That sounds like a great

way to learn about your fellow DXers and I seriously doubt anyone has a boring story to tell. If anyone wants to do this, either write or type something and send it in for VUD publication. Just write it.

The WTFDA Bulletin Board was mentioned a few times. Nobody knows about it or what it's for. The WTFDA Bulletin Board is a real-time prop logger where members post their DX as they receive it. This board is modeled after the tvfmskiplog at DX World, which has a great probability of closing in mid-June. Access requires a password, which you can get from myself or Ed Phelps (nn2e-at-vci.net). If you're used to posting there, you can continue posting on our site when the other one closes. There's a good group of people there to welcome you. <http://wtfdadxb.vci.net>

We had one comment that stated that the WTFDA Forums is underutilized, and I tend to agree with that comment. Sometimes you'll find that 25 individuals have logged in there on a given day, and then just five or six the next. Recently I went into the admin section and deleted about 50 user accounts who had registered at least three years ago and had never returned. But there is a tremendous amount of information for DXers there and a core group of WTFDA members to answer questions. In addition the VUD is uploaded to the Members area every month, in case you delete your copy.

Other requests were to have WTFDA Statistics printed in the VUD once a year, have more original content in the VUD and to publicize the club and the VUD more aggressively on Facebook, which we've just tried. We've offered a free download of the May VUD on the TV & FM DXing group to help show the ignorant out there who we are. Unfortunately the "I want it free or forget about it" attitude is everywhere these days, even if dues are a ridiculously low 83 cents a month.

And that is it for June. Let's hope the Es season starts *soon!* If anyone has any comments or suggestions on the above, just email us and tell us. For you FM DXers, remember that there are two high-powered Dominican stations on 87.5 and 87.9 plus a strong pirate in Miami on 87.9! Be on the lookout! I know I will be. See you all next month. -Mike

The **2018 IRCA convention** will be held at the Best Western Plus Charles Inn in St. Charles MO on September 7 and 8, 2018. The hotel is located at 1425 S Fifth Street in St Charles, NW of I-70 exit 229B, or the first exit west of the Missouri River, eight miles west of the Lambert St Louis International Airport.

The room rate is \$104.99 a night for either a standard king or two queens. The phone number to call the hotel directly to make reservations for that weekend is (636) 946-6936 or toll-free at 1-888-274-0988. When calling to make the reservation, you must mention the code IRCA to get the rate. There is a block of 30 rooms reserved at that rate for each night for your choice of a single or double bed, your choice. Reservations must be made by August 7, 2018. One note, if all the rooms for this block sell out, then the meeting room at the hotel will be complementary. Registration fee is only \$25 per person with free breakfast.

There will be a tentative radio tour of KCLC FM 89.1 at Lindenwood College in St Charles as well as another possible radio tour and a possible tentative radio tower visit. Banquet is out of pocket and the place will be announced at a later date, possibly soon. Your host for the convention is Ken Hawkins. You can either email him at StLouisHerdFan@gmail.com or you can call him on this cell phone at (636) 577-4295. Please make your plans and reservations now for the 2018 IRCA convention as this will probably be one of the best!

The Editor's Note

Welcome to the 2018 DX season. The early returns on this year's E-skip proceedings so far? Yeesh. Stop me if you've heard this before (2015-2017 also featured this general narrative), but unless the last 3 days of the month show some signs of life, Es with usable MUF of any kind was nearly non-existent throughout May. The natives may become understandably restless, but it should be known that we have seen strong turnarounds after dormant Mays for Es in the past. Is it just me, or is August becoming a more conductive month to Es than May? A blip on the radar screen or a real trend?

Accentuating the positive, there was generally more tropo than normal throughout the eastern half of the U.S. in May, likely buoyed by warmer than average temps almost everywhere (except for the southeast). Should the DX be more cooperative in June – please don't forget to get your reports in to us!

Missouri TV Tower Collapses

*Story by John Eggerton
BroadcastingCable.com*

At least one worker is dead and three others are injured after the station tower of Ozarks Public Television's KOZK-TV collapsed in Fordland, Mo., KYTV-TV of Springfield, Missouri, has reported.

KYTV said the tower collapsed Thursday morning (April 19) while a crew of seven was working on it.

The noncommercial station is a PBS affiliate owned by Missouri State University.

That station is being repacked from channel 23 to channel 16, according to the National Association of Broadcasters, and is in the FCC's first phase of stations needing to move to new channels -- the move must be completed by the end of this year.

Whether the tower work was related to the repack had not been determined, though there will be much tower work involved in a move affecting most of a thousand stations.

The station had a 2,000-foot tower built in 2003, according to the NAB.

MISSOURI TV TOWER COLLAPSES

The tower of Ozarks Public Television's KOZK-TV, in Fordland, Mo., collapsed April 19, killing one worker and injuring three others. A total of seven tower workers were at 105' on the tower at the time of the collapse.

Missouri TV Tower Collapses

(continued)

KOZK executives were not available for comment at press time, but the Springfield News-Leader quoted MSU spokeswoman Andrea Mostyn at the scene as saying the station was "conducting some tower... modifications to comply with some FCC changes to channels."

According to an automatic e-mail response, Ozark's chief engineer was scheduled to be out of the office until April 23.

NAB has expressed concerns about safety with so much tower work needed to meet the repack deadlines.

Suzanne Shaw, VP for marketing and communications for Missouri State University, confirmed that the crew was working on repack-related equipment issues rather than routine maintenance. "They were adding reinforcements to accommodate the new equipment associated with channel repacking," she said. Shaw said the crew was working at about the 105 ft.-level of the 1,980 ft. tower when they sensed something was wrong and were getting off the tower when it collapsed. She said there were six crew members working on the tower, with one fatality--one crew member was caught under the tower--and minor injuries to others, though she said they were non-life threatening and that they had all been released from a local hospital. The university was reaching out to the family of the killed worker and providing support to the other members of the crew, giving them transportation and working with them on arranging their trip home--they are based in Washington State. She said the crew was from a subcontractor for a larger tower company. Shaw said KOZK-TV remains off the air, and that the collapse also affected the NOAA weather station, but not KSMU, the university radio station, which was not co-located. Shaw said she had no estimate on when the station would be back on the air, but said they were talking with local broadcasters to partner with them in some way.

Investigations Begin In Tower Collapse

Story by Tom Butts - TVTechnology.com

FORDLAND, MO.—The Occupational and Safety Hazard Agency says it will examine the cause of the tower collapse in Fordland, Mo. yesterday that took the life of a 56-year old owner of a Washington-state tower company, according to KY3.com.

Steve J. Lemay was identified as the victim in the accident, which also injured three other crew members. Lemay had 25 years of experience and formed Steve Lemay LLC in 2013.

The tower hosted Ozarks Public Television 's KOZK-TV, a PBS affiliate owned by Missouri State University.

OSHA said it would investigate what caused the accident and if workers were complying with OSHA standards. The agency said workers had climbed approximately 100 feet up the nearly 2,000 foot tall tower when it collapsed.

According to Ozarks Public Radio station KSMU, the Webster County Sheriff's Office is also conducting an investigation and that other stations in the region are assisting in getting the station back on the air.

An aerial view of the 2000' tower that collapsed Thursday morning, shortly before 10 AM CDT, on April 19, 2018. The tower is owned by PBS affiliate KOZK 21 Springfield, Missouri.

The Six Month Report

Radiocuba Files An Official Report on the impact of Hurricane Irma

Story compiled by Jim Thomas
WTFDA FM Database
South of the Border Editor

Following the passage of Hurricane Irma, the Radio Communication and Broadcasting Company of Cuba - *Radiocuba* - reported a total of 325 TV and radio broadcast services had been impacted. Downed or damaged towers and power failures were reported in the provinces of Guantánamo, Santiago de Cuba, Granma, Holguin, Las Tunas, Camagüey, Ciego de Ávila, Sancti Spíritus, Villa Clara, Matanzas, Mayabeque, Artemisa and Havana. The amount of impact on broadcasting were the dismantling of satellite parabolas in preparation of hurricane landfall; transmitters being turned off for their protection; the lack of manpower for emergency preparedness; rain water in the equipment due to excessive rain from the hurricane; and finally, completely destroyed towers due to storm force.

Salvaging the Losses - One of several Radiocuba tower crews working on one of the 18 broadcast towers lost in the Hurricane Irma destruction.

Radiocuba & Hurricane Irma The Six Month Report

As of March 1, 2018.....247 TV & radio broadcast facilities have been restored, representing 76% of the total number impacted. Of the 78 services pending to be restored, 42 are directly connected to electrical power failure. These damages are mainly concentrated in the areas of greatest impact of the hurricane and include the areas of Villa Clara, Camagüey, Ciego de Ávila, Matanzas and Cienfuegos. Most significantly, the impact of Hurricane Irma completely demolished 18 broadcast towers out of 23 that experienced some type of damage.

September 22, 2017

Granma's workers of Radio Cuba reverse the ravages of Hurricane Irma in Camagüey

A brigade from the Territorial Division of Radio Cuba of Granma will begin this week the last phase of the assembly of the Tagarro medium wave tower, demolished by Hurricane Irma, which belongs to the Transmitter Center located in Camagüey.

The construction of a new tower for broadcasting in amplitude modulation of the Radio Cadena Agramonte and Radio Rebelde stations, is the work that the six towermen of Granma have been doing for about 10 days. According to Yunior Blanco Arias, head of the group, the first actions were concentrated on trying to save elements of the previous destroyed tower, that can be used in later maintenance works, as was the basis to reuse any parts where necessary.

At the moment we are working on the rehabilitation of the elements that make up the tower and then give it the proper strength, then tighten well and apply anticorrosive paint, once they are dry, begin the assembly and finish it at the most in 15 days, Blanco Arias added. For Wilfredo López Traba, one of the workers of Radio Cuba who collaborates in Camagüey, with almost 12 years of experience in the recovery of these transmitters, this is an opportunity to show solidarity with his comrades in Camagüey, as he did in other territories when previous hurricanes such as Dennis, Ike, Paloma, Sandy and Matthew lashed the country.

Within the assembly process, the most complex stage is the joining of the lengths until reaching the 90 meters of height that must reach the new tower. Adrián Ramírez Guzmán, a young man from Granma. is working for the first time on a tower project, and hopes with this mission that he will gain experience on the job, using his knowledge from a recent training course. Likewise, as the towermen of Radio Cuba of Granma, specialists of Camaguey carry out similar works in the community of Brazil, in the northern municipality of Esmeralda, one of the most damaged by the storm Irma, where the winds also overturned a similar tower.

JUNE 2018

... 37 ...

ON THE FLOODED STREETS OF HAVANA

Cuba's crumbling infrastructure was no match for Hurricane Irma

Irma hit Cuba as a Category 5 hurricane and barreled through the central and western provinces, causing catastrophic destruction in a country that prides itself on disaster preparedness. At least 10 people died – Cuba's worse hurricane death toll since Hurricane Dennis killed 16 in 2005.

Post Hurricane Irma Radiocuba's To-Do List

At the beginning of 2018, Radiocuba was already in the recovery phase. Radiocuba's key focus was to spend all its energies in this complete recovery from the hurricane. Its immediate list of attention was and continues to be focused on these areas:

- The parts, pieces and other metal structures that will replace the affected towers of the Medium Wave Transmission Centers of Tagarro and Brazil, Camagüey. All towers at these two centers were completely lost.
- The 9-tower construction team of Radiocuba Granma was assigned to work at the Tagarro Transmitting Center, while the Camagüey tower construction crew was sent to Transmission Center at Brazil, Camagüey.
- A group of technical management specialists were at the Radio Reloj Transmitter Center in Villa Clara with the mission of repairing the tower and getting the station back on the air.
- The broadcast tower under construction at the Coffee Transmission Center at Ciego de Ávila was seriously affected, and had to be completely dismantled.
- The construction team from the Construction and Assembly Division of Radiocuba was sent to Villa Clara for multiple repairs of equipment.
- Matanzas and Mayabeque Radio & TV facilities were damaged, but due to a shortage of manpower, local authorities were to oversee the repairs.
- Tower construction crews were sent to Santiago de Cuba to give support for recovery of services there.
- Likewise, the Sancti Spíritus tower maintenance crew was made available to support operations at Ciego de Ávila.
- The tower construction crews of Cienfuegos and Pinar del Río were put on call for assistance to other areas and were to be available for support to any divisions in need.
- Radiocuba's key focus is to recover all technical operations in the field and return services in the shortest possible time without sacrificing quality.
- The profiles of Radiocuba were to remain active on social media sites and work with digital media to keep the public informed of the progress of repairs and the timetable of broadcast facilities returning to the air.
